## Notes:

DPI Fisheries have reviewed the Scoping Report (version 2, March 2020) for the Luddenham Resource Recovery Center and makes the following comment: A riparian revegetation plan should be created and implemented on the eastern side of the proposed site (Lot 3, DP 623 799). DPI Fisheries notes that the proposal also seeks a reduction in the area of the Environmental & Recreation Zone in this riparian area. The riparian revegetation plan shall incorporate the maintenance of lateral connectivity between aquatic and riparian vegetation in the area.

(Josi Hollywood – Fisheries Manager, DPI)
