To whom it may concern,

Re: Ground Gas Migration from Proposed Development Concern

BGL has considered ground gas migration and there is no expectation for lateral migration as a consequence of the development of the site given it is underlain by a venting layer designed to capture and exhaust these gases.

At surface, the venting layer will further be supported by atmospheric influence which will further prevent lateral migration of significance at shallow depth.

Should you have any further queries relating to the matter, please do not hesitate contacting the undersigned.

Regards,

Michael Novak
