COMPLIANCE REQUIREMENTS

APARTMENT DESIGN GUIDE OBJECTIVE 3E-1

Design criteria

1. Deep soil zons are to meet hte following minimum requirements:

Site area	Minimum dimensions	Deep soil zone (% of site area)
Less than 650m²	-	7%
650m² - 1,500m²	3m	
Greater than 1,500m²	6m	
Greater than 1,500m² with significant existing tree cover	6m	

Design Guidance

On some sites it may be possible to provide larger deep soil zones, depending on the site area and context:

a. 10% of the site as deep soil on sites with an area of 650m2 - 1,500m2
b. 15% of the site as deep soil on sites greater than 1,500m2

Achieving the design criteria may not be possible on some sites including where:

a. The location and building typology have limited or no space for deep soil at ground level (e.g. central business district, constrained sites, high density areas, or in centres)
b. There is 100% site coverage or non-residential uses at ground floor level

Where a proposal does not achieve deep soil requirements, acceptable stormwater management should be achieved and alternative forms of planting provided such as on structure.

Building C is proposed with full site coverage. To compensate, an alternative planting area is provided within the Level 3 communal open space, offering a soil zone up to 1 metre deep. Small trees are proposed in planter boxes with planting depths of up to 2 metres.

DEEP SOIL COMPLIANCE SCHEDULE
