Dear Mr Ireland,

Re: Grenfell Poultry Breeder Farm SSD-13855453 - Annual Water Demand

Thank you for your email Thu 24/02/2022 providing Central Tablelands Water (CTW) with the Annual Water Demand table listed below and nominating a peak limit of 1.0ML/day (11.6L/s).

ACTIVITY	ML / year
Bird Drinking	65.8
Shed Cooling	65.8
Manager Residences & Staff Amenities	5.1
Shed Cleaning	0.2
Landscaping / Tree Planting	4.0
TOTAL	140.9

CTW is pleased to acknowledge that the annual supply of water, as listed in this table, will be available from CTW during periods up to and including Level 6 restrictions as determined by our latest Demand Management Plan Version 4 and Drought Management Plan Version 4, both adopted by CTW council August 2021.

CTW is able to provide the maximum flowrate of water, nominated as 1.0 ML/day, to the customer due to the augmentation of Trunk Main K, commissioned in 2020.

CTW is able to source the quantity water from a combination of our Lake Rowlands Dam and our Gooloogong Bores (400ML/yr licence) during the high demand periods.

As this water connection is sourced directly from Trunk Main K and not a town reservoir, the property owner will be required to provide a suitably sized onsite reservoir/s to reduce any operational impacts on their business whilst CTW undertakes routine and breakdown maintenance of its infrastructure.

Yours faithfully,

Noel Wellham
Director, Operations & Technical Services
