Executive Summary

This Preliminary Site Investigation (Contamination) with Limited Sampling (PSI-L) conducted by Douglas Partners Pty Ltd (DP) accompanies an Environmental Impact Statement (EIS) pursuant to Part 4 of the Environmental Planning and Assessment Act 1979 (EP&A Act) in support of an application for a State Significant Development (SSD No 15788005). The SSDA is for a new education campus at Jindabyne, comprising of a new primary and high school, located at the Jindabyne Sport and Recreation Centre (JSRC).

- Key Issue 19 – Contamination:
    - Assess and quantify any soil and groundwater contamination and demonstrate that the site is suitable for the proposed use in accordance with SEPP 55. This must include the following prepared by certified consultants recognised by the NSW Environment Protection Authority:
        - PSI-L (contamination).

The objective of the PSI-L was to identify potential sources of contamination and determine the potential contaminants of concern, identify areas of potential contamination, identify human and ecological receptors associated with the proposed development and identify potentially affected media (soil, groundwater, ground gas etc.).

The PSI-L included the following scope of works:

- Preparation of a list of Potential Areas of Environmental Concern (PAEC) through investigation of the site by the following methods:
    - Review of local topographic, soil, geological, salinity and acid sulfate soils mapping;
    - Review of available historical aerial photography for the site to identify land uses and changes in the land that may indicate a potential for contamination;
    - Search of the NSW EPA contaminated land records to determine the existence of statutory notices current on any parts of the site, or adjacent land, under the Contaminated Land Management Act (1997) and licences (if any) under the Protection of the Environment Operations Act (1997);
    - Search through the dangerous goods database held by SafeWork NSW;
    - NSW Office of Water groundwater bore search;
    - Summary of current and historic titles and Deposited Plans to identify previous owners that may indicate potentially contaminating activities that may have occurred on site; and
    - Review of readily available Council records and Section 10.7 (formerly Section 149) certificate.
- Excavation of twenty-eight test pits (Pits 1 to 27 and 16A) using a 15 tonne tracked excavator with a 600 mm bucket to depths of between 0.6 m to 3.5 m below ground level (m bgl);
- Collection of 75 primary soil samples (*i.e.* one to four samples collected per test pit). Soil samples were collected at regular intervals, change in strata or indications of potential contamination. Each soil sample included one soil jar and one 40 g plastic bag for asbestos analysis (asbestos identification only);

- Collection of two material samples from test pit spoil (M1 and M4) and two material samples collected from the ground surface (M2 and M3) that were all suspected asbestos containing materials (ACM) (refer to Drawing 1 for surface locations);
- Collection and field testing of replicate samples using a calibrated photo-ionisation detector (PID), in the field, of all soil samples collected;
- Laboratory analysis of 34 primary soil samples for a range of the following contaminants of potential concern (CoPC):
  - Metals/metalloids (arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc);
  - Polycyclic aromatic hydrocarbons (PAH);
  - Total recoverable hydrocarbons (TRH);
  - Benzene, toluene, ethylbenzene and xylene (BTEX);
  - Phenols;
  - Organochlorine pesticides (OCP) and organophosphorus pesticides (OPP);
  - Polychlorinated biphenyls (PCB); and
  - Asbestos (identification only).
- Laboratory analysis of two samples for pH and CEC for the purposes of determining site-specific ecological investigation levels (EILs);
- Field sampling included a quality assurance/quality control (QA/QC) plan consisting of a minimum of 10% replicate sampling and laboratory analysis, trip blank, trip spike, and appropriate chain of custody procedures and internal laboratory QA/QC testing;
- Development of a preliminary conceptual site model (CSM); and
- Provision of this report detailing the methodology and results of the limited intrusive investigation and providing comment on: identifying observed potential sources of contamination and associated potential contaminants; the compatibility of the site for the proposed development; and recommendations for further works if considered necessary.

The site history information suggests that the site was used for agricultural purposes (pastoral land) from between 1916 to 1952. From between 1952 and 1972, the site was owned by the Snowy Mountains Hydro-Electric Authority (SMHEA) until the land become Crown Land between 1972 to 1994. Residential structures were noted in the aerial photograph from 1964. The aerial photograph from 1979 indicates that the residential structures were removed sometime between 1964 and 1979, possibly after the land had been transferred to be Crown Land. From between 1994 to 2006, the land was owned by the Minister for Education until the land was transferred to the current owner in 2006 to the Minister Administrating the Sporting Venues Management Act 2002. The aerial photograph from 1992 suggests that sometime between 1988 and 1992, part of a golf course had been constructed on the site. The site still appears to be part of a golf course in the 2018 aerial photograph.

The following general sub-surface conditions are as followed:

- **TOPSOIL/TOPSOIL FILL:** to depths of 0.15 m to 0.3 m in all test pits, except Pits 2, 12, 16, 24 and 27. Remnant topsoil (very stiff low plasticity sandy clay) was encountered in Pit 23 between depths of 0.15 m to 0.3 m;

- **FILL:** from the ground surface to depths of 0.15 to 1.5 m in Pits 2, 5, 12, 16, 20, 23, 24, 26 and 27; Pit 24 refused in this stratum at a depth of 1.5 m;

- **NATURAL SOILS:** from depths of 0.15 m to 1.5 m in Pits 1, 4, 7, 8, 10 to 13, 15, 16, 18, 19, 21 to 23, 25 and 16A; Pit 16 terminated in this stratum at the limit of investigation depth of 1.5 m.

- **INTRUSIVE VOLCANICS:** from depths of 0.2 m to 1.5 m to the termination depths of 0.6 m – 3.6 m in all the test pits except Pits 16 and 24.

The anthropogenic items and building debris observed in the fill at Pits 2, 16, 24, 25 and 26 included steel reinforced concrete, fragments of concrete, brick, terracotta pipe, terracotta pots, glass, asphalt and timber.

Potential asbestos containing materials were observed in fill at Pits 25 (collected as M1) and 26 (collected as M4) and on the surface in the south-eastern portion of the site (collected as M2 and M3). These locations are shown on Drawing 1, Appendix A. The material samples were submitted to the analytical laboratory for asbestos identification in materials in order to confirm the presence or absence of asbestos.

The results of the PID screening indicated that the sub-surface conditions were generally absent of volatile organic compounds (VOC) with all recorded values less than 1 ppm.

Perched groundwater was observed in Pit 20 at 2.2 m depth. No free groundwater was observed during the site investigation in all other test pits.

The analytical results for all contaminants tested in all samples were below the SAC with the exception of:

- Zinc in sample Pit 25/0.1 m at 550 mg/kg which exceeded the EIL of 500 mg/kg. While this is a marginal exceedance of the adopted SAC, given the limited nature of the PSI-L undertaken to date, it is considered appropriate that further intrusive investigation be undertaken at and near this location. It is further noted that the current data set is not sufficient to undertake statistical analysis;
- Chlordane in sample Pit 23/0.1 m at 65 mg/kg which exceeded the HIL-A of 50 mg/kg. While this is a marginal exceedance of the adopted SAC, given the limited nature of the PSI-L undertaken to date, it is considered appropriate that further intrusive investigation be undertaken at and near this location. It is further noted that the current data set is not sufficient to undertake statistical analysis;
- Chrysotile asbestos and Amosite asbestos were identified in material sample M1 taken from fill encountered in Pit 25; and
- Chrysotile asbestos, Amosite asbestos and Crocidolite asbestos were identified in material sample M2 taken from site surface in the south-eastern portion of the site near to Pit 25.

While both of the reported chemical exceedances of the adopted SAC are marginal, given the limited nature of the PSI-L undertaken to date, it is considered appropriate that further intrusive investigation should be undertaken on these identified areas and other areas of the site with the same potential sources of contamination that have not yet been intrusively investigated.

Based on the identified presence of fragments of asbestos containing material in the area of former residential development in the south eastern portion of the site, it is considered appropriate that further asbestos investigation should be undertaken in this area.

However, based on the results of the PSI-L, it is considered that the site can be made suitable for the proposed school development subject to recommended further investigation, subsequent further data analysis and subsequent remediation or management if considered necessary based on the findings of the further investigation.

Report on Preliminary Site Investigation (Contamination) with Limited Sampling
Jindabyne Central School
Part Lot 101, DP1019527, Jindabyne

1. Introduction

This Preliminary Site Investigation (Contamination) with Limited Sampling (PSI-L) conducted by Douglas Partners Pty Ltd (DP) accompanies an Environmental Impact Statement (EIS) pursuant to Part 4 of the Environmental Planning and Assessment Act 1979 (EP&A Act) in support of an application for a State Significant Development (SSD No 15788005). The SSDA is for a new education campus at Jindabyne, comprising of a new primary and high school, located at the Jindabyne Sport and Recreation Centre (JSRC).

This report addresses the Secretary's Environmental Assessment Requirements (SEARs), notably:

- Key Issue 19 – Contamination:
    - Assess and quantify any soil and groundwater contamination and demonstrate that the site is suitable for the proposed use in accordance with SEPP 55. This must include the following prepared by certified consultants recognised by the NSW Environment Protection Authority:
        - PSI-L (contamination).

2. Proposed Development

The proposed development is for the construction of the Jindabyne Education Campus comprising a new primary school and a new high school at Jindabyne (the proposal). The proposal is located within the JSRC located at 207 Barry Way (the site) and will accommodate approximately 925 students with the capacity for expansion in the future.

The new primary school will be located generally in the northern portion of the site whilst the new high school will be to the south of the site. While the schools are inherently separate identities, with separate student entries, opportunities for integration are provided in a central shared plaza with co-located school administration facilities, as identified in Figure 1 below. This outdoor learning space is activated by the school canteen (shared) and separate core facilities including the primary school hall and library, and the high school gym and library, and provides opportunities for shared community use.

The new primary school will provide for a Core 21 school. This will comprise of 20 home base units and 2 support learning units, administration and staff facilities, covered outdoor learning area (COLA), hall, staff and student amenities, out of school care facilities, library and special programs. Landscaped areas include active and passive open space play areas, and a games court.

The new high school will provide for a stream 2 high school. This is to comprise of 20 general/specialised learning spaces and support learning units, administration and staff facilities, covered outdoor learning

area (COLA), hall, staff and student amenities, library, an agricultural learning unit. Landscaped areas include active and passive open space play areas, a sports field and multipurpose games courts.

A new access driveway is proposed off Barry way Road along the western boundary of the site and includes car parking, bus and private vehicle drop-off zones, and delivery zones.

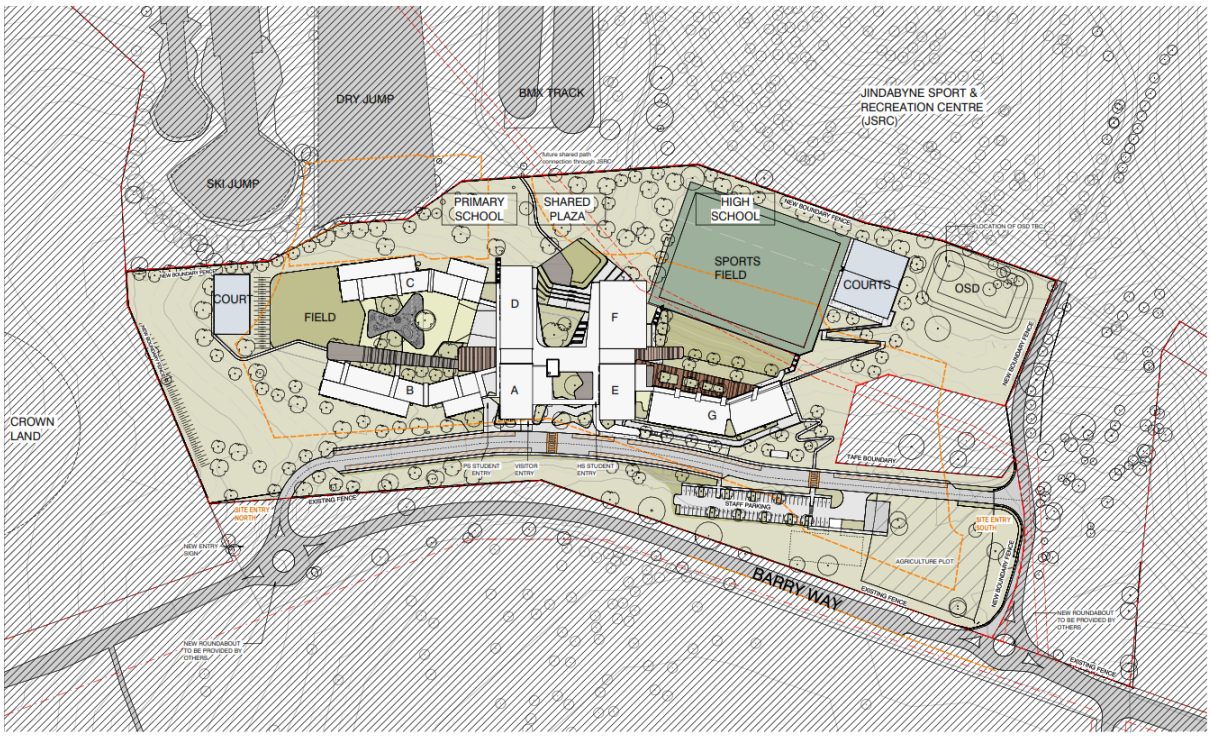

Figure 1 Proposed Site Plan

3. Site Information and Description

3.1 Site Identification

Site Address	207 Barry Way, Jindabyne
Legal Description	Part of Lot 101 Deposited Plan 1019527
Area	9.5 ha
Zoning	Zone RU1 Primary Production
Local Council Area	Snowy Monaro Regional Council
Current Use	Vacant (part of a former golf course) and residential land

Surrounding Uses	North – Agriculture East – Vacant and recreational South – Agriculture West – Agriculture/Airport

3.2 Site Description

The site of the proposed new education campus at Jindabyne is located within the western extent of the existing JSRC at 207 Barry Way (101 DP1019527). The site is located within the Snowy Monaro Regional Council local government area and is approximately 2.2km south of the Jindabyne town Centre. A site aerial is provided in Figure 2.

The site is approximately 9 ha in size, containing a former golf course and three existing workers cottages which were occupied during the construction of the Snowy Hydro Scheme. The majority of the site is undeveloped and contains maintained grasslands and scattered trees. Much of the surrounding land comprises remnant grassland, woodland and agricultural land.

As identified above, the site is within the existing JSRC which is a high performance and community sport centre located directly east of the site. The JSRC has a range of sporting facilities including a synthetic running track, cycling track, netball and tennis courts, fitness and indoor sports centres, and sporting ovals, as well as other services and accommodation facilities. The newly constructed BMX track is located directly east of the site with the new ski jump currently under construction to the northeast.

TAFE NSW have recently lodged a development application for a Connected Learning Centre (CLC) and Mobile Training Unit (MTU) which is proposed to the south of the site. The CLC and MTU will utilise interactive, digitally enabled, flexible, and multipurposed learning environments to provide high-quality training and learning experiences accommodating a maximum of 20-25 students and three teachers.

The surrounding locality is generally rural in character with other land uses also including the Jindabyne Aero Club located to the west of the site on Tinworth Drive, an industrial area to the southwest and the Jindabyne Community recycling centre is located east of the JSRC.

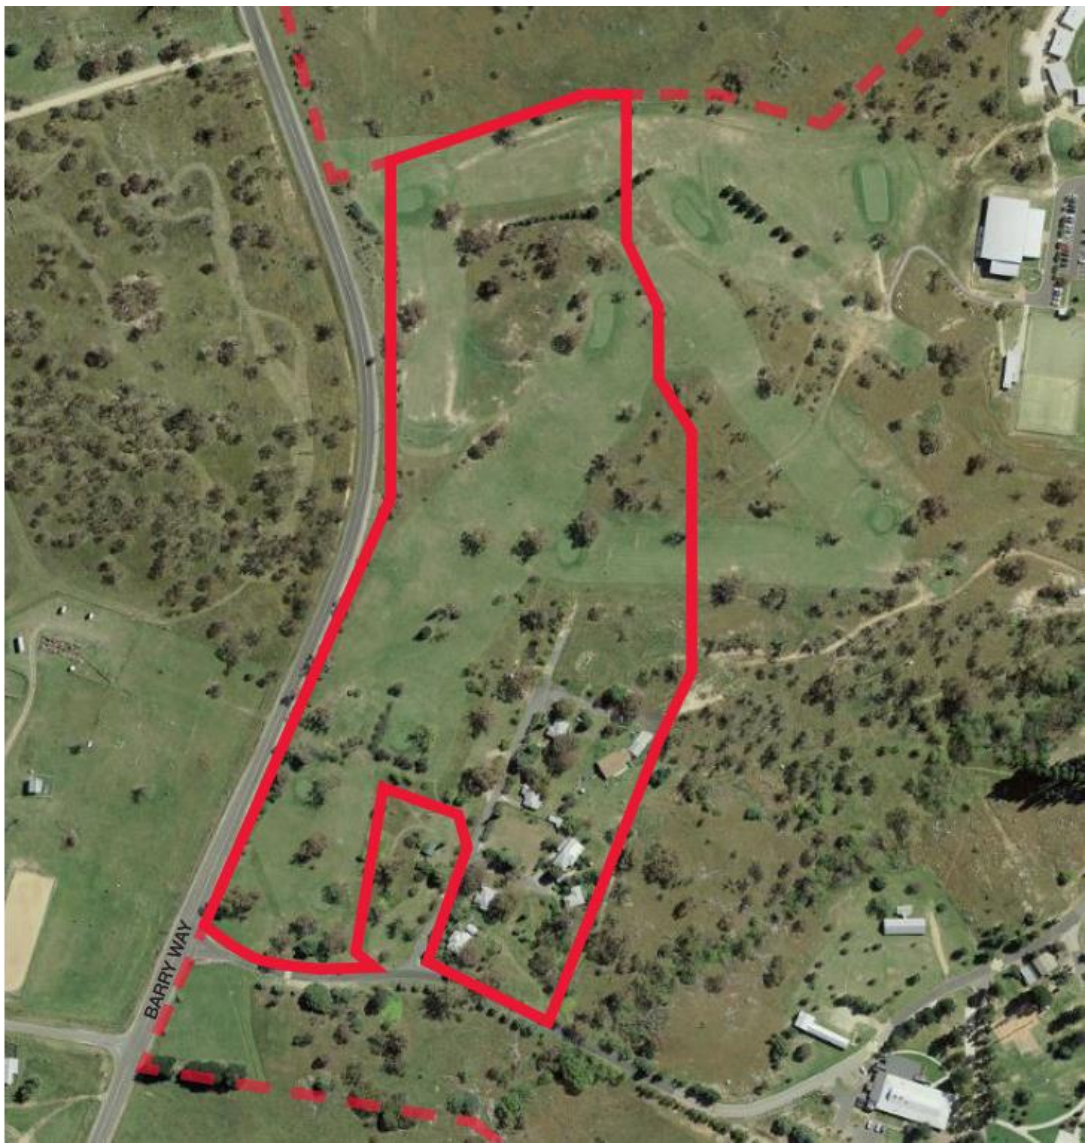

Figure 2: Site aerial - new education campus within the Jindabyne Sport and Recreation Centre.
Source: DJRD

4. General

DP has been engaged by Colliers on behalf of NSW Department of Education - School Infrastructure NSW (SINSW) to revise the previous preliminary site investigation and limited intrusive investigation undertaken for a new primary and high school in Jindabyne for the site at Part Lot 101, DP1019527, Jindabyne (hereinafter referred to as 'the site'). It is understood that a portion of the southern end of the site has now been excluded from the site investigation (see Figure 2). It should be noted that the information contained in Sections 1 – 3 of this report has been provided by the client as a Pro-Forma and DP has been required to reproduce these paragraphs in this report. The site location and site features are shown on Drawing 1, test locations are shown on Drawing 2 and a survey plan, provided

by the client is shown on Drawing 3, Appendix A. DP considered it appropriate to consolidate both previous reports into the one revised report.

The objective of the PSI-L was to identify potential sources of contamination and determine the potential contaminants of concern, identify areas of potential contamination, identify human and ecological receptors associated with the proposed development and identify potentially affected media (soil, groundwater, ground gas etc.).

The investigation was undertaken in general accordance with DP's proposal CAN200329.P.001.Rev0 dated 9 October 2020 and acceptance received from Christine Yorkston dated 06 November 2020 and subsequent variations dated 23 March 2021 and 25 August 2021, and acceptance received from Neil Hogan dated 30 March 2021 and David Carey 17 September 2021, respectively. This report must be read in conjunction with all appendices including the notes provided in Appendix B.

5. Scope of Work

The PSI-L included the following scope of works:

- Preparation of a list of Potential Areas of Environmental Concern (PAEC) through investigation of the site by the following methods:
    - Review of local topographic, soil, geological, salinity and acid sulfate soils mapping;
    - Review of available historical aerial photography for the site to identify land uses and changes in the land that may indicate a potential for contamination;
    - Search of the NSW EPA contaminated land records to determine the existence of statutory notices current on any parts of the site, or adjacent land, under the Contaminated Land Management Act (1997) and licences (if any) under the Protection of the Environment Operations Act (1997);
    - Search through the dangerous goods database held by SafeWork NSW;
    - NSW Office of Water groundwater bore search;
    - Summary of current and historic titles and Deposited Plans to identify previous owners that may indicate potentially contaminating activities that may have occurred on site; and
    - Review of readily available Council records and Section 10.7 (formerly Section 149) certificate.
- Excavation of twenty-eight test pits (Pits 1 to 27 and 16A) using a 15 tonne tracked excavator with a 600 mm bucket to depths of between 0.6 m to 3.5 m below ground level (m bgl);
- Collection of 75 primary soil samples(*i.e.* one to four samples collected per test pit). Soil samples were collected at regular intervals, change in strata or indications of potential contamination. Each soil sample included one soil jar and one 40 g plastic bag for asbestos analysis (asbestos identification only);
- Collection of two material samples from test pit spoil (M1 and M4) and two material samples collected from the ground surface (M2 and M3) that were all suspected asbestos containing materials (ACM) (refer to Drawing 1 for surface locations);
- Collection and field testing of replicate samples using a calibrated photo-ionisation detector (PID), in the field, of all soil samples collected;

- Laboratory analysis of 34 primary soil samples for a range of the following contaminants of potential concern (CoPC):
  - Metals/metalloids (arsenic, cadmium, chromium, copper, lead, mercury, nickel and zinc);
  - Polycyclic aromatic hydrocarbons (PAH);
  - Total recoverable hydrocarbons (TRH);
  - Benzene, toluene, ethylbenzene and xylene (BTEX);
  - Phenols;
  - Organochlorine pesticides (OCP) and organophosphorus pesticides (OPP);
  - Polychlorinated biphenyls (PCB); and
  - Asbestos (identification only).
- Laboratory analysis of two samples for pH and CEC for the purposes of determining site-specific ecological investigation levels (EILs);
- Field sampling included a quality assurance/quality control (QA/QC) plan consisting of a minimum of 10% replicate sampling and laboratory analysis, trip blank, trip spike, and appropriate chain of custody procedures and internal laboratory QA/QC testing. It should be noted that discussion of QA/QC decisions are provided in Appendix L;
- Development of a preliminary conceptual site model (CSM); and
- Provision of this report detailing the methodology and results of the limited intrusive investigation and providing comment on: identifying observed potential sources of contamination and associated potential contaminants; the compatibility of the site for the proposed development; and recommendations for further works if considered necessary.

6. Environmental Setting

Regional Topography	The area is surrounded by undulating hills to the west and south and Lake Jindabyne and the Snowy River/Snowy River valley are located to the north and east, respectively. Further west and north, steep mountains are located and slope towards the east. Further south and east, high plains are located in the region. The area generally slopes west to east, towards Lake Jindabyne/Snowy River.
Site Topography	The site is undulating with an overall moderate slope from the western boundary of the site at an approximate height of 1004 m Australian Height Datum (AHD) towards the eastern boundary of the site at an approximate height of 985 m AHD.
Soil Landscape	NA – A search was conducted through the NSW Government eSpade website (https://www.environment.nsw.gov.au/eSpade2WebApp) and eSpade indicated that there is no data for soil landscapes within the site.
Geology	GS NSW (1976) indicates that the site is underlain by the Kosciusko Batholith which comprises granodiorite. Two types of intrusive igneous rock are mapped within the site. The south-western corner of the site is mapped as Leesville Granodiorite and the remaining portion of the site is

	mapped as Jindabyne Tonalite. Fieldwork observations confirmed the presence of intrusive igneous rock across the site (see Section 12.1 and Figure 3 below for further detail). .
Acid Sulfate Soils	Reference to the CSIRO's Atlas of Australian Acid Sulfate Soils online mapping portal, (A S R I S - Atlas of Australian Acid Sulfate Soils (csiro.au)) indicates the site has no known occurrence of acid sulfate soil/extremely low probability of occurrence.
Surface Water	Lees Creek approximately 40 m east at the site's nearest point. Lees Creek flows into Lake Jindabyne approximately 1.1 km from the nearest point of the site.
Groundwater	Anticipated groundwater flow direction is inferred to be towards the east to north-east towards Lees Creek and Lake Jindabyne. A search of the publicly available registered groundwater bore database indicated that there are no registered groundwater bores within 1 km of the site.

An extract of the GS NSW map showing the indicated geological units is shown below in Figure 3.

The field investigation has confirmed the presence of granodiorite and tonalite underlying the site.

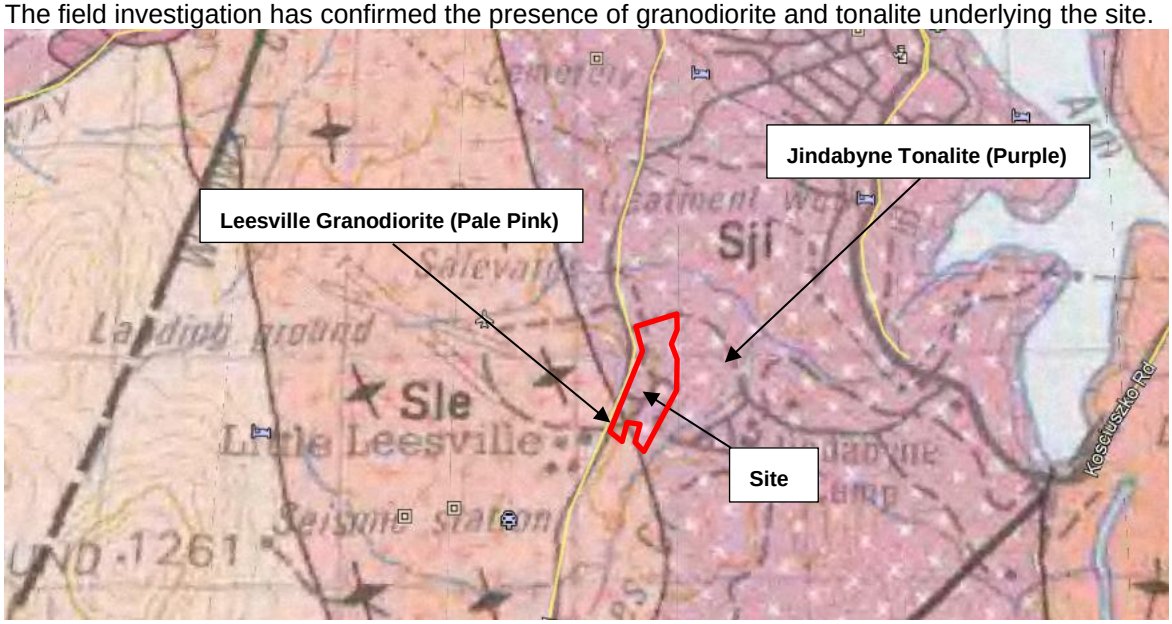

Figure 3: Extract from Geology Map

7. Site History

7.1 Title Deeds

A historical title deeds search was used to obtain ownership and occupancy information including company names and the occupations of individuals. The title information can assist in the identification

of previous land uses by the company names or the site owners and can, therefore, assist in establishing whether there were potentially contaminating activities occurring at the site. A summary of the title deeds and possible land uses (with reference to the aerial photographs and other historical searches) are presented in Table 1 – 4 and provided in Appendix C.

Table 1: Historical Title Deeds – As regards the parts numbered (1) and (2) on the attached extract of D.P. 239506 (The southern half of Part 2 is presently the site of investigation)

Date of Acquisition and Term Held	Registered Proprietor(s) & Occupations	Inferred Land Use
15.02.1916 (1916 to 1952)	William Weston (Grazier)	Agricultural (likely pastoral)
04.02.1952 (1952 to 1972)	Snowy Mountains Hydro-Electric Authority	Unknown – possible residential land use (1962 Aerial Photograph)

Table 2: Historical Title Deeds – As regards the part numbered (3) on the attached extract of D.P. 239506

Date of Acquisition and Term Held	Registered Proprietor(s) & Occupations	Inferred Land Use
07.04.1922 (1922 to 1924)	John Inman McGufficke (Grazier)	Agricultural (likely pastoral)
07.07.1924 (1924 to 1951)	Herbert Norman McGufficke (Grazier)	Agricultural (likely pastoral)
22.11.1951 (1951 to 1972)	Snowy Mountains Hydro-Electric Authority	Unknown

Table 3: Historical Title Deeds As regards the part numbered (4) on the attached extract of D.P. 239506

Date of Acquisition and Term Held	Registered Proprietor(s) & Occupations	Inferred Land Use
	This part was formerly a Crown Road subsequently closed	Transport
16.03.1966 (1966 to 1972)	Snowy Mountains Hydro-Electric Authority	Unknown

Table 4: Historical Title Deeds - Continued as regards the whole of the subject land

Date of Acquisition and Term Held	Registered Proprietor(s) & Occupations	Inferred Land Use
10.05.1972 (1972 to 1994)	Her Most Gracious Majesty Queen Elizabeth the Second	Unknown

Date of Acquisition and Term Held	Registered Proprietor(s) & Occupations	Inferred Land Use
09.02.1994 (1994 to 2006)	Minister for Education	Recreational
21.12.2006 (2006 to date)	# Minister Administering the Sporting Venues Management Act 2002	Recreational

# Denotes Current Registered Proprietor

7.2 Historical Aerial Photography

Five historical aerial photographs (D1 – D5) were obtained from public databases and three satellite images (D6 – D8) were obtained from Google Earth Pro. Extracts of the aerial photographs and satellite images are included in Appendix D. A summary of key features observed for the site and surrounding land is presented in Table 5.

Table 5: Summary of Historical Aerial Photographs

Year	Site	Surrounding Land Use
1962	A number of residential properties were located within the south-eastern portion of the site. A number of unsealed roads were located throughout the site. Two roads were located through the middle of the site and the other road was located within the northern portion of the site. Sporadic trees and grassed areas were located throughout the remaining areas of the site.	Barry Way was located along the western boundary of the site with moderately densely populated trees, possible grazing land and an airstrip. Moderately densely populated trees, possible grazing land and unsealed roads were present north of the site. Lees Creek was located east of the site and the development of the Jindabyne Sport and Recreation Centre was underway further east of Lees Creek. Open space, used as possible grazing land and part of Lees Creek was located south of the site. A small number of residential dwellings were located directly south of the site.
1979	The residential properties appeared to have been demolished/removed west of the access road within the site. The unsealed roads within the middle of the site also appeared to have been removed or overgrown. Some additional trees had been planted across the southern portion of the site. And	The houses located to the south of the site appeared to have been demolished. The construction of the Jindabyne Sport and Recreation Centre had been completed.

Year	Site	Surrounding Land Use
	tree removal appeared to have occurred within the northern section of the site.	Small buildings were undergoing development to the north-east of the site.
1988	The site had been developed into a golf course/club with various tee-off points, fairways and greens.	Some small buildings were developed to the north-east of the site, possibly for the golf club/course. To the west of the site, the airstrip had undergone some further development/expansion. Further south-west of the site, the development for a small industrial estate was underway.
1992	Largely unchanged from the previous photograph.	A tennis court was constructed north-east of the site. Development of the industrial estate to the south-west of the site was continuing.
1998	Largely unchanged from the previous photograph.	Additional buildings and tennis courts were constructed to the north-east of the site. The Jindabyne Sport and Recreation Centre was undergoing some redevelopment works.
2003	Largely unchanged from the previous photograph.	The Jindabyne Sport and Recreation Centre redevelopment works were completed.
2013	Largely unchanged from the previous photograph. Several residential developments within the south-eastern portion of the site appeared to have been demolished.	Additional small buildings had been constructed to the north-east of the site. Small structures/possible hangers appeared to have been constructed at the Jindabyne Aeroclub.
2018	Largely unchanged from the previous photograph. Additional dwellings within the south-eastern portion of the site appeared to have been demolished.	Additional structures within the Jindabyne Sport and Recreation Centre had been constructed.

7.3 Public Registers and Planning Records

EPA (or equivalent) Notices – Provided in Appendix C	No Notices for the site or any site within 1 km; accessed 21/07/2021

EPA (or equivalent) Licences	No Notices for the site or any site within 1 km; accessed 21/07/2021
SafeWork NSW (or equivalent) Provided in Appendix C	A signed authority to conduct information search was returned to DP on 23 of September 2021 and DP requested the search for Schedule 11 Hazardous Chemicals at Hazardous Substances for the broader site on the same day. SafeWork NSW returned the search results on 27 October 2021 and the results of the search include the following: • The most recent licence for the site was dated 5 September 2003 and indicated that there are three above ground LPG tanks (ranging from 1000 – 6000 L in size), one underground petrol storage tank (UST) (5000 L in size) and one roof storage area with 200 L of petrol and 20 L of turpentine; • Mud maps/site sketches for the 2003 license indicate approximate tank/fuel locations (see Appendix C and Drawing 1, Appendix A). Ms Jeni Hamilton, an employee of the JSRC indicated that all USTs on site have been removed 'years' ago; • The USTs were located within the recreational facility approximately 300 – 400 m east and down gradient of the proposed school site; • Several licenses dating back to 1972, 1981, 1986 and 1989 indicated that there were other LPG and USTs located within the site (see Appendix C), however the locations of these tanks are unknown; and • A pistol club was located 300 m east and down gradient of the proposed school site. It should be noted that the sketch of "Area 4" was not scanned properly (i.e. only the left hand corner of the page was scanned). DP have requested that SafeWork NSW amend the scanned page for the "Area 4" sketch. DP have not received a response from SafeWork NSW at the time of writing this revised PSI-L. Ms Hamilton noted that the second UST was located at the JSRC reception/head office/kiosk.
Planning Certificate(s) – Provided in Appendix C	The land has not been assessed for the likelihood of contamination by Council considering past uses or results of systematic sampling. The site is not considered critical habitat, is not located in a conservation area nor contains registered heritage items. The site is not located in a mine subsidence or road widening/construction area. The site is not located in a naturally occurring asbestos (NOA) hazard/risk area. The site is located in a bushfire hazard/risk area. The site is not subject to flood related development controls. The site is not located in bio-diversity certified land. The site is not reported to contain loose fill asbestos.

	The site is not/has not been identified as contaminated land as per the Contaminated Land Management Act 1997 or Environmental Planning and Assessment Act 1979 (EP&A Act).
Council Records	No relevant records

7.4 Underground Services

A Dial Before You Dig (DBYD) search was conducted and a certified service locator was engaged for work health and safety reasons before intrusive works begun on-site. The JSRC staff were also able to provide DP with a number of water, sewer and electrical plans. All DBYD and JSRC provided plans are included in Appendix C. It should be note a small number of plans could not be included in Appendix C, due to the files being protected.

Underground service lines have the potential to allow migration of contaminants off-site and some historical underground services may contain ACM (i.e. electrical, telecommunication, stormwater conduits, etc.). The services within or at the boundary of the site were noted as follows:

- Water/Irrigation;
  - Located along part of the eastern boundary, one through the middle of the site (stops at approximately in the central portion of the site) and within the south-eastern portion of the site, serving the existing houses on-site. The water lines predominantly run in a south to north orientation. One of the plans indicates that the water services comprise of 100 mm poly-pipe and;
  - Irrigation service lines were not highlighted on any DBYD or JSRC plans, however, during the walkover, evidence of irrigation lines were observed sporadically across the site. Where these lines were noted, it appeared they were constructed of either metal or poly-pipe.
- Sewer;
  - A sewer main is located through the south-east portion of the site and runs in a south to north orientation. The sewer line then deviates to the north-east, out of the site. The deviation occurs at the end of the asphalted access road.
- Electricity:
  - An electrical service line is located along the eastern side of the access road, running in a south to north orientation and turns east at the end of the access road and runs through the centre of the site in an east to west orientation. Several electrical lines are also present in the south-east portion of the site, servicing the existing dwellings;
- Telecommunications;
  - Telecommunication and internet lines (NBN and Telstra) are aligned along the western boundary of the site in a north to south orientation and run through middle section of the site in an east to west orientation. Telecommunication lines are also located along the western side of the access road and appear to terminate at the end of the access road.

Although plans did not indicate the presence of ACM-containing conduits, DP cannot guarantee that these services and other unknown services do not contain ACM.

7.5 Site History Integrity Assessment

The information used to establish the history of the site was sourced from reputable and reliable reference documents, many of which were official records held by Government departments/agencies. The databases maintained by various Government agencies potentially can contain high quality information, but some of these do not contain any data at all.

In particular, aerial photographs provide high quality information that is generally independent of memory or documentation. They are only available at intervals of several years, so some gaps exist in the information from this source. The observed site features are open to different interpretations and can be affected by the time of day and/or year at which they were taken, as well as specific events, such as flooding. Care has been taken to consider different possible interpretations of aerial photographs and to consider them in conjunction with other lines of evidence.

7.6 Summary of Site History

The site history information suggests that the site was used for agricultural purposes (pastoral land) from between 1916 to 1952. From between 1952 and 1972, the site was owned by the Snowy Mountains Hydro-Electric Authority (SMHEA) until the land become Crown Land between 1972 to 1994. Residential structures were noted in the aerial photograph from 1964. The aerial photograph from 1979 indicates that the residential structures were removed sometime between 1964 and 1979, possibly after the land had been transferred to be Crown Land. From between 1994 to 2006, the land was owned by the Minister for Education until the land was transferred to the current owner in 2006 to the Minister Administrating the Sporting Venues Management Act 2002. The aerial photograph from 1992 suggests that sometime between 1988 and 1992, part of a golf course had been constructed on the site. The site still appears to be part of a golf course in the 2018 aerial photograph. The SafeWork search indicates that the most recent hazardous substance license there is one UST and one area of above ground fuel storage approximately 400 m east and downgradient of the site as well as above ground LPG tanks. Given that the storage areas are down gradient of the site and the distance from the site, it is unlikely that the fuel storage and gas storage would affect the site.

8. Site Walkover

A site walkover was undertaken by an environmental scientist on 19 January 2021 and 22 April 2021. The general site topography was consistent with that described in Section 6. The following key site features pertinent to the PSI-L were observed (refer to photographs in Appendix E).

- The site comprised part of a former golf course, during the walkover, it appeared that the golf course was no longer in use. The site was moderately to heavily grassed with overgrown weeds and sporadic clumps of mature trees located across the site;
- A small storage shed was located just outside of the site where the CLC is proposed to be located. The storage shed was in good condition and appeared to have been recently constructed. At the time of the walkover, the shed was inaccessible. There were no obvious signs of chemical or fuel storage around the storage shed;

- Shallow rock and some rock outcropping were present across the southern half of the site and a rocky knob was located within the central northern portion of the site. The rock appeared to be moderately to slightly weathered granodiorite/tonalite. Along the central eastern boundary and central northern portion of the site, some surface rock was observed. The surface rock also appeared to be moderately weathered granodiorite/tonalite;
- Five small areas of sand and remnant topsoil were noted across the site. It is likely that they were once greens from the previous golf course;
- A potential fill pad or potential site cut was noted south of the storage shed, along the eastern portion of the site;
- Five fill pads were noted across the site. The fill pads appeared to be remnant tee-off points and greens from the former golf course;
- Potential surface fill was noted across the central eastern portion of the site;
- Services were noted across the site including water and irrigation services and communication services. The service trenches have to potential to contain uncontrolled/undocumented fill;
- Two concrete blocks were noted within the ground along the eastern boundary. The blocks were potentially old foundations from the previous residential dwellings noted in the 1962 Aerial Photograph;
- Sporadic inert waste was observed across the site. The waste included fragments of PVC pipe, concrete fragments, minor amounts of brick and plastic food packaging;
- An unsealed track was present through the northern portion of the site. The unsealed track was a haulage road for machinery and trucks for the construction of a BMX track north of the site;
- Part of a ski-jump construction site is located within the central northern portion of the site. The construction site comprised a number of large spoil stockpiles from excavations north-east of the site. The spoil comprises of residual clay and rock of varying degrees of weathering. The spoil was in the process of being sorted for the filling of the ski-jump;
- The south-eastern portion of the site comprised an undulating area that had an overall slope from the west, down towards the east. Several existing residential properties were noted across the area. Underground services were also present in this area;
- The Jindabyne Aeroclub was noted to be located approximately 950 m to the west of the site. Civilian airports have been known to use per- and poly-fluoroalkyl substances (PFAS). It is not known if the Jindabyne Aeroclub have used PFAS in the past although it should be noted that the structures and possible hangers located within the Aeroclub were constructed sometime between 2003 and 2013 and in 2003 to 2004 Airservices Australia and the Australian Defence Force started phasing out the use of PFAS. It is unlikely PFAS has been used/stored within the Jindabyne Aeroclub. DP also notes that potential underground fuel storage may also be present within the Aeroclub site. DP notes that it is likely that surface water and groundwater flow would follow the topography of the area. The overall slope of the Jindabyne Aeroclub is to the north-east and is cross-gradient to the site, the slope follows an unnamed tributary that eventually conjoins Lees Creek, north of the site of investigation.
- No evidence of staining or odorous soils was noted during the site inspection;
- No evidence of underground fuel storage tanks or above fuel storage tanks were noted during the site inspection; and

- Two potential asbestos containing material (PACM) fragments were noted during the site walkover within the south-eastern portion of the site. It is noted that DP's scope did not include a hazardous building materials assessment.

It should be noted that due to the dense vegetation across the site, observations of potential fill, hazardous building materials and stained soils was limited during the walkover.

9. Preliminary Conceptual Site Model

A conceptual site model (CSM) is a representation of site-related information regarding contamination sources, receptors and exposure pathways between those sources and receptors. The preliminary CSM provides the framework for identifying how the site became contaminated and how potential receptors may be exposed to contamination either in the present or the future i.e. it enables an assessment of the potential source – pathway – receptor linkages (complete pathways).

Potential Sources

Based on the findings of the site history searches and site walkover, the following potential sources of contamination and associated contaminants of potential concern (CoPC) have been identified.

- S1: Fill: Associated with levelling and development of the golf course, demolition of former residential dwellings on the site and former unsealed roads that were present on the site.
  - CoPC includes metals, total recoverable hydrocarbons (TRH), benzene, toluene, ethylbenzene, xylene (BTEX), polycyclic aromatic hydrocarbons (PAH), polychlorinated biphenyls (PCB), organochlorine pesticides (OCP), organophosphate pesticides (OPP), phenols and asbestos.
- S2: Former residential dwellings and underground services dating back to the 1960's
  - CoPC include asbestos, synthetic mineral fibres (SMF), lead (in paint) and PCB.
- S3: Application of pesticides, herbicides and fungicides to the golf course.
  - CoPC include metals, OCP/OPP, herbicides and fungicides.

Potential Receptors

The following potential human receptors have been identified:

- R1: Current site users [recreational];
- R2: Future construction and maintenance workers;
- R3: End users [school – students, teachers and other school employees]; and
- R4: Adjacent site users [recreational and agricultural].

The following potential environmental receptors have been identified:

- R5: Surface water [Lees Creek – Fresh Water];
- R6: Groundwater; and

- R7: Terrestrial ecology.

Potential Pathways

The following potential pathways have been identified:

- P1: Ingestion and dermal contact;
- P2: Inhalation of dust and/or vapours;
- P3: Surface water run-off;
- P4: Lateral migration of groundwater providing base flow to water bodies;
- P5: Leaching of contaminants and vertical migration into groundwater; and
- P6: Contact with terrestrial ecology.

Summary of Potentially Complete Exposure Pathways

A 'source–pathway–receptor' approach has been used to assess the potential risks of harm being caused to human or environmental receptors from contamination sources on or in the vicinity of the site, via exposure pathways (potential complete pathways). The possible pathways between the above sources (S1 to S3) and receptors (R1 to R7) are provided in Table 6.

Table 6: Summary of Potentially Complete Exposure Pathways

Source and CoPC	Transport Pathway	Receptor	Risk Management Action
S1: Undocumented/uncontrolled fill, Metals, TRH, BTEX, PAH, OCP and asbestos	P1 and P2	R1, R2 and R3	Fill was present across the site. During the site walkover, surface fill, fill pads and potential surface fill and fill pads were observed at various locations within the site (refer to Drawing 1). An intrusive investigation is recommended to assess possible contamination including testing of the soils and groundwater.
	P2	R4	
	P3 and P5	R5	
	P4	R6	
	P6	R7	
S2: Former buildings and underground services, residual hazardous building material – asbestos, SMF, lead (in paint) and PCB	P1, P2 and P3	R1	Former residential dwellings were noted in *Aerial Photograph 1962* along the eastern boundary. Potential former concrete footing structures were also observed during the site walkover along the eastern boundary.
		R2	
		R3	
	P3, P4 and P5	R4	
	P3 and P4	R5	
	P4 and P5	R6	

Source and CoPC	Transport Pathway	Receptor	Risk Management Action
	P6	R7	An intrusive investigation is recommended to assess possible contamination including testing of the soils and groundwater.
S3: Past and Present golf course maintenance practices – pesticides, herbicides and fungicides	P1, P2 and P3	R1	The site forms part of a former golf course. During the site walkover, former tee-off areas and greens were observed across the site. It is likely that these areas were subjected to past golf course maintenance practices. An intrusive investigation is recommended to assess possible contamination including testing of the soils and groundwater.

10. Sampling and Analysis Quality Plan

10.1 Data Quality Objectives

The PSI-L was devised with reference to the seven-step data quality objective process which is provided in Appendix B Schedule B2, NEPC (2013). The DQO process is outlined in Appendix F.

10.2 Soil Sampling Rationale

Based on the CSM and DQO, the following sampling rationale was adopted.

A limited targeted sampling strategy and opportunistic sampling from the concurrent geotechnical test pits was adopted. Locations were selected primarily to target areas of the proposed development for geotechnical purposes with concurrent sampling for contaminated land investigation purposes. Some targeting of the PAEC identified during the site history review was undertaken with the rationale provided below. Test pit locations are shown on Drawing 2, in Appendix A.

Pits 1 to 27 and 16A	Target areas of the proposed development for geotechnical purposes.
Pits 5, 7, 8, 22 and 25	In the vicinity of the existing and former buildings
Pits 2, 12, 16, 23, 24 and 26	Located on tees and greens of the golf course
Pit 20	Located in a potential in-filled gully line

Soil samples were collected for contaminated land investigation purposes from each test pit at depths of approximately 0.1 m, 0.5 m and 1.0 m and every 1.0 m or change of strata thereafter until 0.5 m into natural soils or rock or prior termination of the test pit.

The general sampling methods are described in the field work methodology, included in Appendix G.

11. Site Assessment Criteria

The site assessment criteria (SAC) applied in the current investigation are informed by the CSM (Section 9) which identified human receptors to potential contamination on the site. Analytical results are assessed (as a Tier 1 assessment) against the SAC comprising primarily the investigation and screening levels of Schedule B1 of NEPC (2013).

The investigation and screening levels applied in the current investigation comprise levels adopted for the most sensitive land use setting for the site which is residential land use with garden/accessible soil and includes primary schools (Human Investigation/Screening Levels – HIL/HSL-A). DP considers that a HIL/HSL-A is appropriate for the entire site (i.e. including the high school area) because of the proposed agricultural plot (access to gardens) and it is not known whether primary school students will have access to high school areas or not. The derivation of the SAC is included in Appendix H and the adopted SAC are listed on the summary analytical results tables in Appendix K.

12. Results

12.1 Field Work Results

The test pit logs for this assessment are included in Appendix I. The logs recorded the following general sub-surface profile:

- **TOPSOIL/TOPSOIL FILL:** generally stiff to hard, low plasticity sandy clay and medium dense to dense clayey sand, with various amount of gravel and rootlets to depths of 0.15 m to 0.3 m in all test pits, except Pits 2, 12, 16, 24 and 27. Remnant topsoil (very stiff low plasticity sandy clay) was encountered in Pit 23 between depths of 0.15 m to 0.3 m;

- **FILL:** generally low plasticity to low – medium plasticity, stiff – very stiff to very stiff-hard sandy clay and/or loose to medium dense sandy soils, with various mixture of silt, sand, gravel, rootlets and cobbles, trace building debris, from the ground surface to depths of 0.15 to 1.5 m in Pits 2, 5, 12, 16, 20, 23, 24, 26 and 27; Pit 24 refused in this stratum at a depth of 1.5 m;

- **NATURAL SOILS:** generally low plasticity to medium – high plasticity, very stiff to hard sandy clay and/or medium dense to dense sandy soils with various mixtures of sand, gravel, trace cobbles and boulders from depths of 0.15 m to 1.5 m in Pits 1, 4, 7, 8, 10 to 13, 15, 16, 18, 19, 21 to 23, 25 and 16A; Pit 16 terminated in this stratum at the limit of investigation depth of 1.5 m.

- **INTRUSIVE VOLCANICS:** variably very low strength to high - very high strength, highly weathered to slightly weathered granodiorite/tonalite from depths of 0.2 m to 1.5 m to the termination depths of 0.6 m – 3.6 m in all the test pits except Pits 16 and 24.

The anthropogenic items and building debris observed in the fill at Pits 2, 16, 24, 25 and 26 included steel reinforced concrete, fragments of concrete, brick, terracotta pipe, terracotta pots, glass, asphalt and timber.

Potential asbestos containing materials were observed in fill at Pits 25 (collected as M1) and 26 (collected as M4) and on the surface in the south-eastern portion of the site (collected as M2 and M3). These locations are shown on Drawing 1, Appendix A. The material samples were submitted to the analytical laboratory for asbestos identification in materials in order to confirm the presence or absence of asbestos.

A photo-ionisation detector (PID) was used for screening replicate samples. The results of the PID screening indicated that the sub-surface conditions were generally absent of volatile organic compounds (VOC) with all recorded values less than 1 ppm. The results also indicate there is a low risk of hydrocarbon contamination on-site and migration from off-site locations.

Perched groundwater was observed in Pit 20 at 2.2 m depth and appeared to infiltrate the test pit from an up-gradient position, after 5 – 10 minutes (while continuing the test pit excavation), seepage of groundwater appeared to stop. The fill was unconsolidated with various amounts of cobbles and boulders, resulting in gaps within the fill matrix. It is thought that the perched groundwater is a result of surface run-off migrating through gaps in the fill and fractured area of rock. No free groundwater was observed during the site investigation in all other test pits. It is noted that the test pits were immediately backfilled following excavation which precluded longer term monitoring of groundwater level. Groundwater conditions rarely remain constant and can change seasonally due to variations in rainfall, temperature and soil permeability. For these reasons, it is noted that the moisture condition of the site soils may vary considerably from the time of the investigation compared to at the time of construction. It must be noted that due to the topography and fractured weathered rock, groundwater seepages must be expected following periods of rainfall.

It is unlikely that potential contaminants from adjacent sites have migrated to the site from groundwater as no free-flowing groundwater was observed during the intrusive investigation.

12.2 Laboratory Analytical Results

The results of soil laboratory analysis are summarised in the table in Appendix K:

The laboratory certificate(s) of analysis together with the chain of custody and sample receipt information are provided in Appendix J.

13. Discussion

13.1 Contamination Status of Soils

The analytical results for all contaminants tested in all samples were below the SAC with the exception of:

- Zinc in sample Pit 25/0.1 m at 550 mg/kg which exceeded the EIL of 500 mg/kg. While this is a marginal exceedance of the adopted SAC, given the limited nature of the PSI-L undertaken to date, it is considered appropriate that further intrusive investigation be undertaken at and near this location. It is further noted that the current data set is not sufficient to undertake statistical analysis;
- Chlordane in sample Pit 23/0.1 m at 65 mg/kg which exceeded the HIL-A of 50 mg/kg. While this is a marginal exceedance of the adopted SAC, given the limited nature of the PSI-L undertaken to date, it is considered appropriate that further intrusive investigation be undertaken at and near this location. It is further noted that the current data set is not sufficient to undertake statistical analysis;
- Samples Pit 20/0.5 m and Pit 20/1.0 m were collected in fill material overlying highly fractured to fractured tonalite and perched groundwater. The analytical results for all contaminants tested in all samples were below the SAC. It is considered that the perched groundwater would not be affected by the overlying fill material.
- The anthropogenic materials observed (see Section 12.1) are considered to be inert and non-hazardous from a chemical perspective. However, some anthropogenic material including glass, tiles and terracotta pipe have a potentially to physically harm future site workers and land users;
- Chrysotile asbestos and Amosite asbestos were identified in material sample M1 taken from fill encountered in Pit 25; and
- Chrysotile asbestos, Amosite asbestos and Crocidolite asbestos were identified in material sample M2 taken from site surface in the south-eastern portion of the site near to Pit 25.

13.2 Data Quality Assurance and Quality Control

The data quality assurance and quality control (QA/QC) results are included in Appendix L. Discussion of QA/QC decisions are also provided in Appendix L. Based on the results of the field QA and field and laboratory QC, and evaluation against the data quality indicators (DQI) it is concluded that the field and laboratory test data obtained are reliable and useable for this assessment.

13.3 Conceptual Site Model

Based on the findings of this PSI-L, it is considered the Preliminary CSM provided in Section 9 is still appropriate. However, at this stage of the investigation, groundwater has only been observed as being perched and the fill located above the perched groundwater showed no signs of contamination and chemical analysis indicated that all contaminants of concern were below the HIL/HSL-A criteria. DP considers that a groundwater investigation is not necessary at this stage.

14. Conclusions and Recommendations

While both of the reported chemical exceedances of the adopted SAC are marginal, given the limited nature of the PSI-L undertaken to date, it is considered appropriate that further intrusive investigation

should be undertaken on these identified areas and other areas of the site with the same potential sources of contamination that have not yet been intrusively investigated.

Based on the identified presence of fragments of asbestos containing material in the area of former residential development in the south eastern portion of the site, it is considered appropriate that further asbestos investigation should be undertaken in this area.

However, based on the results of the PSI-L, it is considered that the site can be made suitable for the proposed school development subject to recommended further investigation, subsequent further data analysis and subsequent remediation or management if considered necessary based on the findings of the further investigation. Care should be taken when handling material (during future site investigations and developments) with glass and other potential sharp objects and where practical, anthropogenic materials should be segregated from soil material. Furthermore, when handling material with potentially sharp objects, correct PPE should be worn, or machines should be used when handling material affected by sharp anthropogenic objects.

16. Limitations

Douglas Partners (DP) has prepared this report for this project at Part of Lot 101 DP 1019725, Jindabyne in accordance with DP's proposal dated 9 October 2020 and acceptance received from Christine Yorkston dated 06 November 2020 and subsequent variations dated 23 March 2021 and 25 August 2021, and acceptance received from Neil Hogan dated 30 March 2021 and David Carey 17 September 2021, respectively. The work was carried out under contract ID SINSW01290/20, dated 6 November 2020. This report is provided for the exclusive use of NSW Department of Education - School Infrastructure NSW for this project only and for the purposes as described in the report. It should not be used by or relied upon for other projects or purposes on the same or other site or by a third party. Any party so relying upon this report beyond its exclusive use and purpose as stated above, and without the express written consent of DP, does so entirely at its own risk and without recourse to DP for any

loss or damage. In preparing this report DP has necessarily relied upon information provided by the client and/or their agents.

The results provided in the report are indicative of the sub-surface conditions on the site only at the specific sampling and/or testing locations, and then only to the depths investigated and at the time the work was carried out. Sub-surface conditions can change abruptly due to variable geological processes and also as a result of human influences. Such changes may occur after DP's field testing has been completed.

DP's advice is based upon the conditions encountered during this investigation. The accuracy of the advice provided by DP in this report may be affected by undetected variations in ground conditions across the site between and beyond the sampling and/or testing locations. The advice may also be limited by budget constraints imposed by others or by site accessibility.

The assessment of atypical safety hazards arising from this advice is restricted to the environmental components set out in this report and based on known project conditions and stated design advice and assumptions. While some recommendations for safe controls may be provided, detailed 'safety in design' assessment is outside the current scope of this report and requires additional project data and assessment.

This report must be read in conjunction with all of the attached and should be kept in its entirety without separation of individual pages or sections. DP cannot be held responsible for interpretations or conclusions made by others unless they are supported by an expressed statement, interpretation, outcome or conclusion stated in this report.

This report, or sections from this report, should not be used as part of a specification for a project, without review and agreement by DP. This is because this report has been written as advice and opinion rather than instructions for construction.

Asbestos has been detected by observation and by laboratory analysis, on the surface of the site and in surface fill. Building demolition materials, such as concrete, brick, terracotta, glass and timber were, however, located on the surface and in below-ground filling. These are considered as indicative of the possible presence of further hazardous building materials (HBM), including asbestos.

Although the sampling plan adopted for this limited intrusive investigation is considered appropriate to achieve the stated project objectives, there are necessarily parts of the site that have not been sampled and analysed. It is therefore considered possible that HBM, including asbestos, may be present in unobserved or untested parts of the site, between and beyond sampling locations.

About This Report

About this Report

Douglas Partners

Introduction

These notes have been provided to amplify DP's report in regard to classification methods, field procedures and the comments section. Not all are necessarily relevant to all reports.

DP's reports are based on information gained from limited subsurface excavations and sampling, supplemented by knowledge of local geology and experience. For this reason, they must be regarded as interpretive rather than factual documents, limited to some extent by the scope of information on which they rely.

Copyright

Borehole and Test Pit Logs

The borehole and test pit logs presented in this report are an engineering and/or geological interpretation of the subsurface conditions, and their reliability will depend to some extent on frequency of sampling and the method of drilling or excavation. Ideally, continuous undisturbed sampling or core drilling will provide the most reliable assessment, but this is not always practicable or possible to justify on economic grounds. In any case the boreholes and test pits represent only a very small sample of the total subsurface profile.

Interpretation of the information and its application to design and construction should therefore take into account the spacing of boreholes or pits, the frequency of sampling, and the possibility of other than 'straight line' variations between the test locations.

Groundwater

Where groundwater levels are measured in boreholes there are several potential problems, namely:

- In low permeability soils groundwater may enter the hole very slowly or perhaps not at all during the time the hole is left open;
- A localised, perched water table may lead to an erroneous indication of the true water table;
- Water table levels will vary from time to time with seasons or recent weather changes. They may not be the same at the time of construction as are indicated in the report; and
- The use of water or mud as a drilling fluid will mask any groundwater inflow. Water has to be blown out of the hole and drilling mud must first be washed out of the hole if water measurements are to be made.

More reliable measurements can be made by installing standpipes which are read at intervals over several days, or perhaps weeks for low permeability soils. Piezometers, sealed in a particular stratum, may be advisable in low permeability soils or where there may be interference from a perched water table.

Reports

The report has been prepared by qualified personnel, is based on the information obtained from field and laboratory testing, and has been undertaken to current engineering standards of interpretation and analysis. Where the report has been prepared for a specific design proposal, the information and interpretation may not be relevant if the design proposal is changed. If this happens, DP will be pleased to review the report and the sufficiency of the investigation work.

Every care is taken with the report as it relates to interpretation of subsurface conditions, discussion of geotechnical and environmental aspects, and recommendations or suggestions for design and construction. However, DP cannot always anticipate or assume responsibility for:

- Unexpected variations in ground conditions. The potential for this will depend partly on borehole or pit spacing and sampling frequency;
- Changes in policy or interpretations of policy by statutory authorities; or
- The actions of contractors responding to commercial pressures.

If these occur, DP will be pleased to assist with investigations or advice to resolve the matter.

About this Report

Site Anomalies

In the event that conditions encountered on site during construction appear to vary from those which were expected from the information contained in the report, DP requests that it be immediately notified. Most problems are much more readily resolved when conditions are exposed rather than at some later stage, well after the event.

Information for Contractual Purposes

Where information obtained from this report is provided for tendering purposes, it is recommended that all information, including the written report and discussion, be made available. In circumstances where the discussion or comments section is not relevant to the contractual situation, it may be appropriate to prepare a specially edited document. DP would be pleased to assist in this regard and/or to make additional report copies available for contract purposes at a nominal charge.

Site Inspection

The company will always be pleased to provide engineering inspection services for geotechnical and environmental aspects of work to which this report is related. This could range from a site visit to confirm that conditions exposed are as expected, to full time engineering presence on site.

GRANT UPON PURCHASE OF UNNECESSARY ROAD

(Under the Public Roads Act, 1902)

ELIZABETH the SECOND, by the Grace of God of the United Kingdom, Australia and her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith:—

To All to whom these Presents shall come, Greeting:—

Whereas SNOWY MOUNTAINS HYDRO-ELECTRIC AUTHORITY (the Corporation Sole constituted under the Snowy Mountains Hydro-electric Power Act 1949)

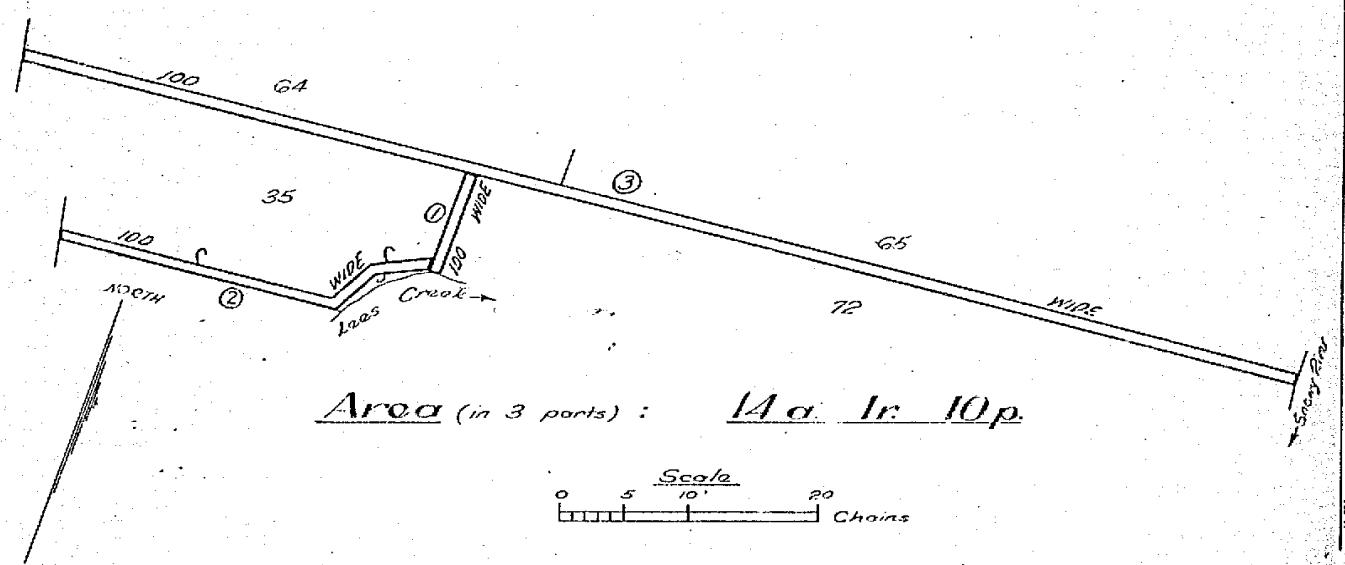
(hereinafter called the GRANTEE) being the owner of land adjoining the land hereinafter described and intended to be hereby granted (formerly roads which were duly closed in accordance with the provisions of the Public Roads Act, 1902) agreed to have such land granted to it upon payment of the sum of one hundred and fourteen pounds ten shillings

being the value thereof as determined by the Local Land Board AND WHEREAS all things required by law to be done to entitle the GRANTEE to a Grant of the fee simple of the said land Subject to the Reservations and Exceptions hereinafter contained have been done and performed NOW THESE PRESENTS WITNESS That in consideration of the premises WE DO HEREBY GRANT unto the GRANTEE Subject to the Reservations and Exceptions hereinafter contained ALL THAT parcel of land containing by admeasurement fourteen acres one rood ten perches

be the same more or less situated in the County of Wallace

Parish of Clyde in three parts FIRSTLY Being the closed road separating portion 35 from portion 72 and extending from the line connecting the North Eastern corner of portion 35 with the North Western corner of portion 72 in a Southerly direction to the left bank of Lees Creek SECONDLY Being the closed road reserved through portion 35 and extending from the Eastern boundary line of portion 35 in a South Westerly direction and thence in a Westerly direction along the Southern boundary line of portion 35 to the Southernmost South Western boundary line of portion 35 AND THIRDLY Being the closed road separating portions 64 and 65 from portion 35 the firstly described part of the subject 14 acres 1 rood 10 perches and portion 72 and extending from the line connecting the Southernmost South Western corner of portion 64 with the North Western corner of portion 35 in an Easterly direction to the right bank of the Snowy River

CANCELLED



As per Plan hereon TO HOLD unto the GRANTEE in fee simple

PROVIDED NEVERTHELESS AND WE DO HEREBY RESERVE AND EXCEPT unto Us Our Heirs and Successors all minerals which the said Land contains with full power and authority for Us Our Heirs and Successors and such person or persons as shall from time to time be authorised by Us or Them to enter upon the said Land and to search for mine dig and remove the said minerals AND ALSO all such parts and so much of the said Land as may hereafter be required for public ways in over and through the same to be set out by Our Governor for the time being of Our said State or some person by him authorised in that respect with full power for Us Our Heirs and Successors and for Our Governor as aforesaid by such person or persons as shall be by Us Them or him authorised in that behalf to make and conduct all such public ways And the right of full and free ingress egress and regress into out of and upon the said Land for the several purposes aforesaid or any of them IN TESTIMONY WHEREOF We have caused this Our Grant to be Sealed with the Seal of Our said State

AB

To: Shannon Goodsell
Subject: RE: Jindabyne School

Hi Shannon,

I believe originally the site had two underground tanks.

One near Jillamatong lodge (on your map that would have been Area 4 near where it says Office) and one in the maintenance/transport yard. (Area 1)

Both have been removed many years ago.

Hope that helps.

Thanks,

Jeni Hamilton

Subject: Jindabyne School

Hi Jeni,

I just tried contacting Eric but I have just seen that he is on long service leave.

I'm currently working on the contamination reports for the Jindabyne school site and I was hoping you could help me out with something. I have recently received a dangerous goods search from SafeWork NSW (attached) and they have highlighted that some underground fuel storage tanks are present/were present within the sport and rec site.

On the plans of the search there only seems to be one underground storage tank marked up but the search has noted more than one underground tank. I was wondering if you had any idea if there are other tanks present on site or the whereabouts of removed tanks on site? If so could you please mark up the approximate locations?

Any help would be greatly appreciated.

Thank you,

Planning Certificate – Section 10.7

Environmental Planning and Assessment Act 1979

Section 10.7(2) Details

In accordance with the requirements of section 10.7(2) of the Environmental Planning and Assessment Act 1979 (as amended), the following prescribed matters relate to the land at the date of this certificate.

Certificate Information	
Certificate Number	1033/21
Certificate Date	19/02/2021
Your Reference	103109.01

Property Description	
Address	Jindabyne Sport & Recreation Centre 207 Barry Way JINDABYNE NSW 2627
Land Title	Lot: 101 DP: 1019527
Assessment Number	40541922

This certificate provides information on how a property (such as land and buildings) may be used and the limits on its development. The certificate contains information Council is aware of through its records and environmental plans, along with data supplied by the State Government.

Snowy Monaro Regional Council does not accept any liability for anything contained in this certificate which has been supplied by third-party sources and does not warrant the accuracy of the contents.

All users of this certificate must acknowledge that Snowy Monaro Regional Council does not owe them any duty of care and they indemnify Snowy Monaro Regional Council from all claims demands suits actions and proceedings for damages and consequential loss howsoever arising from their use of this certificate and its contents where third-party information is relied upon.

Column 1 Section 10.7(2) (Schedule 4 EP&A Regulation 2000)		Identification of the matter referred to in Column 1 and the extent to which it applies to the land
1	Names of relevant planning instruments and DCPs	
(1)	The name of each environmental planning instrument that applies to the carrying out of development on the land.	Snowy River Local Environmental Plan 2013 Snowy River Local Environmental Plan 2013 (Amendment No 1) See Note 6 for list of State Environmental Planning Policies
(2)	The name of each proposed environmental planning instrument that will apply to the carrying out of development on the land and that is or has been the subject of community consultation or on public exhibition under the Act (unless the Secretary has notified the council that the making of the proposed instrument has been deferred indefinitely or has not been approved).	Nil
(3)	The name of each development control plan that applies to the carrying out of development on the land.	"Snowy River Shire Council Development Control Plan 2013 (Amendment 1) The plan was adopted by Council on 26 November 2013 and came into effect on 20 December 2013. The purpose of DCP 2013 is a source of information covering the technical, legislative and administrative aspects of development within the former Local Government boundary of Snowy River Shire. It provides detailed provisions to guide development so that it achieves the aims and objectives of the Snowy River Local Environmental Plan 2013. The DCP includes detailed objectives and controls for ensuring well designed, quality land use and development within the Snowy Monaro Regional Council. This plan applies to all land to which the Snowy River Local Environmental Plan 2013 applies excluding the site specific Development Control Plan T2 Tyrolean Village Stage 3.
In this clause, proposed environmental planning instrument includes a planning proposal for a LEP or a draft environmental planning instrument.		
2	Zoning and land use under relevant LEPs	
For each environmental planning instrument or proposed instrument referred to in clause 1 (other than a SEPP or proposed SEPP) that includes the land in any zone (however described):		
(a)	the identity of the zone, whether by reference to a name (such as “Residential Zone” or “Heritage Area”) or by reference to a number (such as “Zone No 2 (a)”),	RU1 Primary Production
(b)	the purposes for which the instrument provides that development may be carried out within the zone without the need for development consent,	See Note 7 – Land Use Table
(c)	the purposes for which the instrument provides that development may not be carried out	See Note 7 – Land Use Table

	within the zone except with development consent,	
(d)	the purposes for which the instrument provides that development is prohibited within the zone,	See Note 7 – Land Use Table
(e)	whether any development standards applying to the land fix minimum land dimensions for the erection of a dwelling-house on the land and, if so, the minimum land dimensions so fixed,	Yes. Refer to the NSW Planning Portal https://www.planningportal.nsw.gov.au/spatialviewer/#/find-a-property/address for details or contact Councils Development section.
(f)	whether the land includes or comprises critical habitat,	No
(g)	whether the land is in a conservation area (however described),	Not in Heritage Conservation Area
(h)	whether an item of environmental heritage (however described) is situated on the land.	Yes - Local Item 146 - Jindabyne Winter Sports Academy
2A	Zoning and land use under State Environmental Planning Policy (Sydney Region Growth Centres) 2006	
To the extent that the land is within any zone (however described) under:		
(a)	Part 3 of the State Environmental Planning Policy (Sydney Region Growth Centres) 2006 (the 2006 SEPP), or	N/A
(b)	a Precinct Plan (within the meaning of the 2006 SEPP), or	N/A
(c)	a proposed Precinct Plan that is or has been the subject of community consultation or on public exhibition under the Act,	N/A
the particulars referred to in clause 2 (a)–(h) in relation to that land (with a reference to "the instrument" in any of those paragraphs being read as a reference to Part 3 of the 2006 SEPP, or the Precinct Plan or proposed Precinct Plan, as the case requires).		
3	Complying Development	
(1)	The extent to which the land is land on which complying development may be carried out under each of the codes for complying development because of the provisions of clauses 1.17A(1)(c) to (e), (2), (3) and (4), 1.18 (1) (c3) and 1.19 of State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.	The following Codes are not applicable to this land: Housing Code Commercial and Industrial Alterations Code Commercial and Industrial (New Buildings and Additions) Code Container Recycling Facilities Code Low Rise Medium Density House Code The following Codes are applicable to the land and complying development may be carried out on the whole of the land under these Codes: Nil The following Codes are applicable to the land but due to the provisions of clauses 1.17A(1)(c) to (e), (2), (3) and (4), 1.18(1)(c3) and 1.19 of State Environmental Planning Policy (Exempt and Complying Development Codes)2008 complying development may only be carried out on part of the land under these Codes:

		NIL The following Codes are applicable to the land but due to the provisions of clauses 1.17A(1)(c) to (e), (2), (3) and (4), 1.18(1)(c3) and 1.19 of State Environmental Planning Policy (Exempt and Complying Development Codes)2008 complying development may not be carried out on any part of the land under these Codes: Rural Housing Code Housing Alterations Code General Development Code Subdivisions Code Demolition Code Fire Safety Code Inland Code
(2)	The extent to which complying development may not be carried out on that land because of the provisions of clauses 1.17A(1)(c) to (e), (2), (3) and (4), 1.18 (1)(c3) and 1.19 of that Policy and the reasons why it may not be carried out under those clauses.	For the Codes listed above that may only be carried out on part of the land or may not be carried out on any part of the land the reasons why complying development may not be carried out are as follows: The land is wholly affected by specific land exemptions being an Environmental Heritage Item. The land is partially affected by specific land exemptions being land identified as environmentally sensitive land as it is subject to considerations associated with Terrestrial Biodiversity clauses contained in the relevant Local Environmental Plan. If complying development is permitted on only part of the land due to the above restrictions, the extent to which these restrictions apply to the land can be found on the NSW Planning Portal website maps at www.planningportal.nsw.gov.au. These map(s) are based on the legislated maps/s for Cooma-Monaro Local Environmental Plan 2013, Snowy Rover Local Environment Plan 2013 and Bombala Local Environment Plan 2012 and represent the best information Council has on the extent to which the above restrictions affect this land.
(3)	If the council does not have sufficient information to ascertain the extent to which complying development may or may not be carried out on the land, a statement that a restriction applies to the land, but it may not apply to all of the land, and that council does not have sufficient information to ascertain the extent to which complying development may or may not be carried out on the land.	Not Applicable
		See Note 3 at the end of this Certificate for further information.

4	Repealed	
4A	Repealed	
4B	Annual charges under Local Government Act 1993 for coastal protection services that relate to existing coastal protection works	
In relation to a coastal council–whether the owner (or any previous owner) of the land has consented in writing to the land being subject to annual charges under section 496B of the Local Government Act 1993 for coastal protection services that relate to existing coastal protection works (within the meaning of section 553B of that Act). Note. "Existing coastal protection works" are works to reduce the impact of coastal hazards on land (such as seawalls, revetments, groynes and beach nourishment) that existed before the commencement of section 553B of the Local Government Act 1993.		N/A
5	Mine subsidence	
Whether or not the land is proclaimed to be a mine subsidence district within the meaning of the Coal Mine Subsidence Compensation Act 2017.		No
6	Road widening and road realignment	
Whether or not the land is affected by any road widening or road realignment under:		
(a)	Division 2 of Part 3 of the Roads Act 1993, or	No
(b)	any environmental planning instrument, or	No
(c)	any resolution of the council.	No
7	Council and other public authority policies on hazard risk restrictions	
Whether or not the land is affected by a policy:		
(a)	adopted by the council, or	No (see Note below)
(b)	adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to in planning certificates issued by the council,	Council has been advised by the NSW Department of Planning that in accordance with section 4.14 of the Environmental Planning and Assessment Act 1979 Council is required to be satisfied that a development complies with 'Planning for Bushfire Protection 2019' where that development is within land identified as bushfire prone.
that restricts the development of the land because of the likelihood of land slip, bushfire, tidal inundation, subsidence, acid sulphate soils or any other risk (other than flooding),		
Note: Council has recently been provided with mapping information from the Department of Industry – Resources and Energy in conjunction with the NSW Governments Heads of Asbestos Coordination Authorities (HACA) in relation to the presence of 'Naturally Occurring Asbestos' (NOA) within the Shire. The HACA has also published information on what can be done to avoid contact with NOA. This information can be viewed at http://www.resourcesandenergy.nsw.gov.au/miners-and-explorers/safety-and-health/topics/NOA where there is a link to mapping and other information. The HACA has also published information on what can be done to avoid contact with NOA. Council has adopted an Asbestos Policy which includes provisions applicable to NOA. Council was not aware of the presence of NOA in the Shire when this Policy was adopted, and has no knowledge of any confirmed NOA sites. However following receipt of the mapping information Council is currently in the process of developing risk controls, guidance materials and an asbestos management plan in accordance with the adopted Asbestos Policy. The confirmed presence of naturally occurring asbestos on a site may result in restrictions being imposed upon future development of the site in accordance with the provisions of the Asbestos Policy.		
7A	Flood related development controls information	
(1)	Whether or not development on that land or	Not on Flood Prone Land - the land and access thereto is

part of the land for the purposes of dwelling houses, dual occupancies, multi dwelling housing or residential flat buildings (not including development for the purposes of group homes or seniors housing) is subject to flood related development controls.	flood free and any development of the land will not suffer damage by flooding to a level anticipated in a 1 in 100 year storm event or will not adversely affect properties adjoining and in the locality by reason of the displacement, redirection or increased velocity of flood waters in accordance with the New South Wales Government "Floodplain Development Manual" (2005)
(2) Whether or not development on that land or part of the land for any other purpose is subject to flood related development controls.	No - the land and access thereto is flood free and any development of the land will not suffer damage by flooding to a level anticipated in a 1 in 100 year storm event or will not adversely affect properties adjoining and in the locality by reason of the displacement, redirection or increased velocity of flood waters in accordance with the New South Wales Government "Floodplain Development Manual" (2005)
(3) Words and expressions in this clause have the same meanings as in the standard instrument set out in the Standard Instrument (Local Environmental Plans) Order 2006.	
8 Land reserved for acquisition	
Whether or not any environmental planning instrument or proposed environmental planning instrument referred to in clause 1 makes provision in relation to the acquisition of the land by a public authority, as referred to in section 3.15 of the Act.	Council has not been advised that any environmental planning instrument or proposed environmental planning instrument applying to the land provides for the acquisition of the land by a public authority as referred to in section 3.15 of the Act
9 Contributions plans	
The name of each contributions plan applying to the land.	Snowy River Shire Council Section 7.11 Contributions Plan 2008 Snowy River Shire Council Section 7.11 Contributions Plan 2010 - Shared Trails
9A Biodiversity certified land	
If the land is biodiversity certified land under Part 8 of the Biodiversity Conservation Act 2016, a statement to that effect.	No
Note: Biodiversity certified land includes land certified under Par 7AA of the Threatened Species Conservation Act 1995 that is taken to be certified under Part 8 of the Biodiversity Conservation Act 2016.	
10 Biodiversity stewardship sites	
If the land is a biodiversity stewardship site under a biodiversity stewardship agreement under Part 5 of the Biodiversity Conservation Act 2016, a statement to that effect (but only if the council has been notified of the existence of the agreement by the Chief Executive of the Office of Environment and Heritage).	No
Note: Biodiversity stewardship agreements include biobanking agreements under Part 7A of the Threatened Species Conservation Act 1995 that are taken to be biodiversity stewardship agreements under Part 5 of the Biodiversity Conservation Act 2016.	
10A Native vegetation clearing set asides	
If the land contains a set aside area under section 60ZC of the Local Land Services Act 2013, a statement to that effect (but only if the council has been notified of the existence of the set aside area by Local Land Services or it is registered in the public register under that section).	No
11 Bush fire prone land	
If any of the land is bush fire prone land (as defined in	Not bushfire prone land.

the Act), a statement that all or, as the case may be, some of the land is bush fire prone land. If none of the land is bush fire prone land, a statement to that effect.	Information relied on to answer the above question has been provided to Council by the NSW Rural Fire Service, for more information regarding the above information please contact the NSW Rural Fire Service. (www.rfs.nsw.gov.au) Please see Public Notice Bush Fire Prone Lands Mapping Update at the end of this certificate.
12 Property vegetation plans	
If the land is land to which a property vegetation plan under Part 4 of the Native Vegetation Act 2003 (and that continues in force) applies, a statement to that effect (but only if the council has been notified of the existence of the plan by the person or body that approved the plan under that Act).	No PVP applicable
13 Orders under Trees (Disputes Between Neighbours) Act 2006	
Whether an order has been made under the Trees (Disputes Between Neighbours) Act 2006 to carry out work in relation to a tree on the land (but only if the council has been notified of the order).	No
14 Directions under Part 3A	
If there is a direction by the Minister in force under section 75P (2) (c1) of the Act that a provision of an environmental planning instrument prohibiting or restricting the carrying out of a project or a stage of a project on the land under Part 4 of the Act does not have effect, a statement to that effect identifying the provision that does not have effect.	No
15 Site compatibility certificates and conditions for seniors housing	
If the land is land to which State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004 applies:	
(a) a statement of whether there is a current site compatibility certificate (seniors housing), of which the council is aware, in respect of proposed development on the land and, if there is a certificate, the statement is to include:	No
(i) the period for which the certificate is current, and	N/A
(ii) that a copy may be obtained from the head office of the Department, and	N/A
(b) a statement setting out any terms of a kind referred to in clause 18(2) of that Policy that have been imposed as a condition of consent to a development application granted after 11 October 2007 in respect of the land.	N/A
16 Site compatibility certificates for infrastructure, schools or TAFE establishments	
A statement of whether there is a valid site compatibility certificate (infrastructure), or site compatibility certificate (schools or TAFE establishments) of which the council is aware, in	No

respect of proposed development on the land and, if there is a certificate, the statement is to include:	
(a) the period for which the certificate is valid, and	N/A
(b) that a copy may be obtained from the head office of the Department.	N/A
17 Site compatibility certificates and conditions for affordable rental housing	
(1) A statement of whether there is a current site compatibility certificate (affordable rental housing), of which the council is aware, in respect of proposed development on the land and, if there is a certificate, the statement is to include:	No
(a) the period for which the certificate is current, and	N/A
(b) that a copy may be obtained from the head office of the Department.	N/A
(2) A statement setting out any terms of a kind referred to in clause 17(1) or 38(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 that have been imposed as a condition of consent to a development application in respect of the land.	N/A
18 Paper subdivision information	
(1) The name of any development plan adopted by a relevant authority that applies to the land or that is proposed to be subject to a consent ballot.	No
(2) The date of any subdivision order that applies to the land.	No
(3) Words and expressions used in this clause have the same meaning as they have in Part 16C of this Regulation.	No
19 Site verification certificates	
A statement of whether there is a current site verification certificate, of which the council is aware, in respect of the land and, if there is a certificate, the statement is to include:	No
(a) the matter certified by the certificate, and Note. A site verification certificate sets out the Secretary's opinion as to whether the land concerned is or is not biophysical strategic agricultural land or critical industry cluster land-see Division 3 of Part 4AA of State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007	N/A
(b) the date on which the certificate ceases to be current (if any), and	N/A
(c) that a copy may be obtained from the head office of the Department.	N/A
20 Loose-fill asbestos insulation	
If the land includes any residential premises (within	Council is not aware of any residential dwelling erected

the meaning of Division 1A of Part 8 of the Home Building Act 1989) that are listed on the register that is required to be maintained under that Division, a statement to that effect.	on this land which has been identified in the Loose-Fill Asbestos Insulation Register as containing loose fill asbestos ceiling insulation. Contact NSW Fair Trading if further information is required.
21 Affected building notices and building product rectification orders	
(1) A statement of whether there is any affected building notice of which the council is aware that is in force in respect of the land.	No affected building notice.
(2) A statement of:	
(a) whether there is any building product rectification order of which the council is aware that is in force in respect of the land and has not been fully complied with, and	No building product rectification order.
(b) whether any notice of intention to make a building product rectification order of which the council is aware has been given in respect of the land and is outstanding.	No notice of intention to make a building rectification order.
(3) In this clause:	
affected building notice has the same meaning as in Part 4 of the Building Products (Safety) Act 2017.	
building product rectification order has the same meaning as in the Building Products (Safety) Act 2017.	

Note: The following matters are prescribed by section 59(2) of the Contaminated Land Management Act 1997 as additional matters to be specified in a planning certificate:

(a) that the land to which the certificate relates is significantly contaminated land within the meaning of that Act–if the land (or part of the land) is significantly contaminated land at the date when the certificate is issued,

(b) that the land to which the certificate relates is subject to a management order within the meaning of that Act–if it is subject to such an order at the date when the certificate is issued,

(c) that the land to which the certificate relates is the subject of an approved voluntary management proposal within the meaning of that Act–if it is the subject of such an approved proposal at the date when the certificate is issued,

(d) that the land to which the certificate relates is subject to an ongoing maintenance order within the meaning of that Act–if it is subject to such an order at the date when the certificate is issued,

that the land to which the certificate relates is the subject of a site audit statement within the meaning of that Act–if a copy of such a statement has been provided at any time to the local authority issuing the certificate.

Contaminated Land

As of the date of this certificate, Council has no records to indicate that the site is potentially contaminated.

It is recommended that you ensure that the land has not in the past been used for certain purposes which could have involved the use of contaminates. A list of potentially contaminating uses is outlined in Attachment "A" to the end of this planning certificate.

Refer to Cooma Monaro Development Control Plan 2014 / Snowy River Development Control Plan 2013 / Bombala Development Control Plan 2012 – Planning Guidelines prepared by the Environment Protection Authority and the Department of Urban Affairs and Planning (1998). The guidelines are underpinned by State Environmental Planning Policy No 55 – Remediation of Land (SEPP 55), and the Contaminated Lands Management Act 1987.

In addition, Council has not been made aware of the land being subject to the following:

- land declared to be significantly contaminated land;

- land subject to a management order;
- land subject of an approved voluntary management proposal;
- land subject to an ongoing maintenance order; or
- subject of a site audit statement

IMPORTANT NOTES – SECTION 10.7(2) CERTIFICATE

Note 1 Terms of Reference

This Certificate does not make reference to the physical conditions of the property. Consequently no inspections have been made in respect of:

(a) The presence or otherwise of noxious weeds on the property,
(b) The condition of any structure/s on the land and associated infrastructure.

No advice is included in this Certificate in respect of outstanding or unauthorised works.

Should applicants require such details, that may be in addition to information provided in a S10.7(2) & (5) Certificate, application should be made, accompanied by the appropriate fee for such inspections.

Note 2 Biosecurity (Weeds)

Weeds are a major environmental threat to the Snowy Monaro Region's agricultural and environmental assets. People considering purchasing land, particularly rural land, in the Council area are urged to contact Council's Biosecurity (Weeds) team for advice regarding landowners' responsibilities for the control of weeds.

Note 3 Complying Development

- Under the Housing Code complying development may not be carried out on land which has an area less than 200 square metres and has a width, measured at the building line fronting a primary road, of at least 6m.
- Under the Rural Housing Code complying development for the erection of a new single-storey or two-storey dwelling house may only be carried out on land that (a) has an area of at least 80 hectares, or (b) is subject to a restriction created under section 88B of the Conveyancing Act 1919 that specifies a building envelope for the lot and was required by the council.
- As per clause 1.18 of the Codes SEPP Complying Development is only possible on land where the development would otherwise be permissible with or without consent under the Council's Local Environmental Plan applicable to the land.
- Complying development may not be carried out on land outside the zonings identified in State Environmental Planning Policy (Exempt and Complying Development Codes) 2008, or on a lot which is not entirely within the zoning in the Codes SEPP specified for that particular Complying Development code. Refer to State Environmental Planning Policy (Exempt and Complying Development Codes) 2008 for other permissibility criteria.

Note 4 Important Notice for any maps that relate to this certificate

These maps are not a precise survey document. Accurate locations can only be determined by a survey on the ground.

While every care is taken to ensure the accuracy of this data, neither the Snowy Monaro Regional Council nor the Land and Property Management Authority makes any representations or warranties about its accuracy, reliability, completeness or suitability for any particular purpose and disclaims all responsibility and all liability (including without limitation, liability in negligence) for all expenses, losses, damages (including indirect or consequential damage) and costs which you might incur as a result of the data being inaccurate or incomplete in any way and for any reason.

Note 5 Coinciding Legal and Practical Access

Purchasers of rural and non-urban land are advised to ensure that coinciding legal and practical access can be gained to the property from a public road.

Note 6 State Environmental Planning Policies

Below is a list of all State Environmental Planning Policies (including publicised draft policies) that apply to Snowy Monaro Regional Council. Depending on circumstances set down in each policy, the policy may be specifically applicable to the land that is the subject of this certificate. You are advised to check the policy for the necessary details.

State Environmental Planning Policy No 19—Bushland in Urban Areas
State Environmental Planning Policy No 21—Caravan Parks
State Environmental Planning Policy No 33—Hazardous and Offensive Development
State Environmental Planning Policy No 36—Manufactured Home Estates
State Environmental Planning Policy No 55—Remediation of Land
State Environmental Planning Policy No 64—Advertising and Signage
State Environmental Planning Policy No 65—Design Quality of Residential Apartment Development
State Environmental Planning Policy No 70—Affordable Housing (Revised Schemes)
State Environmental Planning Policy (Aboriginal Land) 2019
State Environmental Planning Policy (Activation Precincts) 2020
State Environmental Planning Policy (Affordable Rental Housing) 2009
State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004
State Environmental Planning Policy (Concurrences and Consents) 2018
State Environmental Planning Policy (Educational Establishments and Child Care Facilities) 2017
State Environmental Planning Policy (Exempt and Complying Development Codes) 2008
State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004
State Environmental Planning Policy (Infrastructure) 2007
State Environmental Planning Policy (Koala Habitat Protection) 2019
State Environmental Planning Policy (Kosciuszko National Park—Alpine Resorts) 2007
State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007
State Environmental Planning Policy (Primary Production and Rural Development) 2019
State Environmental Planning Policy (State and Regional Development) 2011
State Environmental Planning Policy (State Significant Precincts) 2005
State Environmental Planning Policy (Urban Renewal) 2010
State Environmental Planning Policy (Vegetation in Non-Rural Areas) 2017

Any enquiries regarding these State policies should be directed to the Department of Planning.

Planning Agreements

No

Conservation Agreement

Not Applicable

ATTACHMENT A' – S10.7(2)

Activities which are likely to have contaminated sites because of their past or present use:

- asbestos works;
- chemical and petrochemical works;
- docks and railway land, especially large sidings and depots;
- gasworks, other local carbonisation plants and ancillary by products works;
- industries making or using wood preservatives;
- installations involving the processing or use of radioactive materials;
- landfills and other waste disposal and storage sites, and transfer sites;
- land heavily treated with chemicals for agricultural or other purposes, eg aerial spraying;
- metal mines, smelters, foundries, iron and steel works, metal finishing works;
- mine tailings dumps (including mineral sands tailings);
- munitions production and testing sites;
- oil refineries, petroleum storage and distributions sites;
- paper and printing works;
- pesticide storage areas, areas where vehicles used for the transport and storage of pesticides are washed, and areas where tanks are used to store pesticides;
- plants and heavy engineering installations, eg shipbuilding and shipbreaking;
- power stations and switching yards etc;
- scrap yards;
- stock dipping, eg sheep, cattle etc;
- tanneries

Public Notice

Bushfire Prone Lands Mapping Update

The NSW Rural Fire Service (RFS) and Snowy Monaro Regional Council have prepared a draft Bush Fire Prone Land (BFPL) Map using new categories identified by the (RFS) and updated vegetation mapping. This has resulted in the majority of the Local Government Area being mapped as bushfire prone land.

This notice has been prepared to inform you of the changes as they may impact plans for developing your property. Also when the new mapping comes into effect you may notice that your land is now identified as bushfire prone in the Section 10.7 Planning Certificate accompanying the sale of your land.

Please note that the revised map is currently in the drafting stage and will be available to the public in the near future. Council expects the draft map to be approved by the NSW RFS in 2019/20.

The new map is necessary because the NSW Rural Fire Service has changed the current two (2) categories BFPL classification system to a three (3) category BFPL classification system. The three (3) new categories are outlined below.

The three categories are defined as follows:

- Vegetation Category 1 is vegetation which is the highest risk for bush fire. It is represented as red on the BFPL Map and will be given a 100m buffer. This vegetation category has the highest combustibility and likelihood of forming fully developed fires including heavy ember production. Examples of Category 1 vegetation include areas of forest, woodlands, heaths (tall and short), forested wetlands and timber plantations.

- Vegetation Category 2 is considered to be a lower bushfire risk than Category 1 and Category 3 but higher than the excluded areas. It is represented as light orange on a bush fire prone land map and will be given a 30 metre buffer. This vegetation category has lower combustibility and/or limited potential fire size due to the vegetation area shape and size, land geography and management practices. Examples of category 2 vegetation include rainforests and lower risk vegetation parcels.

- Vegetation Category 3 is considered to be medium bush fire risk vegetation. It is higher in bush fire risk than category 2 (and the excluded areas) but lower than Category 1. It is represented as dark orange on a Bush Fire Prone Land map and will be given a 30 metre buffer. Examples of Category 3 vegetation include Grasslands, freshwater wetlands, semi-arid woodlands, alpine complex and arid shrublands.

Any development (including minor works) on properties impacted by the BFPL mapping will require an assessment under Planning for Bushfire Protection Guidelines and relevant construction standards.

Snowy Monaro Regional Council offer planning services to the community including a duty planner available on weekdays and pre-lodgement meetings to discuss planning implications for larger or more complex proposals. Information on building in bushfire prone areas can be found on the NSW RFS website – see https://www.rfs.nsw.gov.au/resources/publications/building-in-a-bush-fire-area.

Dig Site and Enquiry Details

WARNING: The map below only displays the location of the proposed dig site and does not display any asset owners' pipe or cables. The area highlighted has been used only to identify the participating asset owners, who will send information to you directly.

User Reference: 103109
Working on Behalf of: Private

Enquiry Date:	Start Date:	End Date:
01/04/2021	02/04/2021	30/07/2021

Address:
Barry Way
Jindabyne NSW 2627

Job Purpose:	Onsite Activity:
Excavation	Vertical Boring
Location of Workplace:	**Location in Road:**
Private Property	Not Supplied

- Check the location of the dig site is correct. If not submit a new enquiry.
- If the scope of works change, or plan validity dates expire, resubmit your enquiry.
- Do NOT dig without plans. Safe excavation is your responsibility. If you do not understand the plans or how to proceed safely, please contact the relevant asset owners.

Notes/Description of Works:

Your Responsibilities and Duty of Care

- The lodgement of an enquiry does not authorise the project to commence. You must obtain all necessary information from any and all likely impacted asset owners prior to excavation.
- If plans are not received within 2 working days, contact the asset owners directly & quote their Sequence No.
- ALWAYS perform an onsite inspection for the presence of assets. Should you require an onsite location, contact the asset owners directly. Please remember, plans do not detail the exact location of assets.
- Pothole to establish the exact location of all underground assets using a hand shovel, before using heavy machinery.
- Ensure you adhere to any State legislative requirements regarding Duty of Care and safe digging requirements.
- If you damage an underground asset you MUST advise the asset owner immediately.
- By using this service, you agree to Privacy Policy and the terms and disclaimers set out at **www.1100.com.au**
- **For more information on safe excavation practices, visit www.1100.com.au**

Asset Owner Details

The assets owners listed below have been requested to contact you with information about their asset locations within 2 working days.
Additional time should be allowed for information issued by post. It is **your responsibility** to identify the presence of any underground assets in and around your proposed dig site. Please be aware, that not all asset owners are registered with the Dial Before You Dig service, so it is **your responsibility** to identify and contact any asset owners not listed here directly.
** Asset owners highlighted by asterisks ** require that you visit their offices to collect plans.
# Asset owners highlighted with a hash require that you call them to discuss your enquiry or to obtain plans.

Appendix F

Data Quality Objectives

Appendix F
Data Quality Objectives
Part Lot 101, DP1019527, Jindabyne

F1.0 Data Quality Objectives

The Limited Intrusive Contamination Investigation has been devised broadly in accordance with the seven-step data quality objective (DQO) process which is provided in Appendix B, Schedule B2 of NEPC *National Environment Protection (Assessment of Site Contamination) Measure 1999 (as amended 2013) [the 'NEPM']* (NEPC, 2013).

Step	Summary
1: State the problem	It is noted that the preliminary site investigation (contamination) with limited sampling (PSI-L) was undertaken concurrently with a geotechnical investigation. As such the investigation locations were primarily intended to target areas of the proposed development for geotechnical purposes with opportunistic sampling for contaminated land investigation purposes and some targeting of the potential areas of environmental concern (PAEC) identified in Section 7. As such, the objective of the limited intrusive investigation for contamination is to provide preliminary sub-surface information, to assist in determining the compatibility of the site for the proposed development and whether further investigation and/or management is required. The report is being undertaken as the land is to be redeveloped. The requirements of the regulator, Snowy Monaro Regional Council, will also be considered by consulting their Development Control Plan (DCP), Local Environment Plan (LEP), Secretary's Environmental Assessment Requirements (SEARs) and any other requirements based on our recent experience with Council on similar sites. A preliminary conceptual site model (CSM) was prepared as part of PSI-L (Sections 9 & 13.3). This has been revised to reflect the findings of the limited intrusive investigation. The project team consisted of experienced environmental engineers and scientists working in the roles of Project Principal, Project Reviewer, Project Manager, Field staff.
2: Identify the decisions / goal of the study	The PSI-L identified possible contaminating previous uses which are identified in the CSM (Section 9). The CSM identifies the associated contaminants of potential concern (CoPC) and the likely impacted media. The site assessment criteria (SAC) for each of the CoPC are detailed in Section 11. The decision is to establish whether or not the results fall below the SAC or whether or not the 95% upper confidence limit of the sample population falls below the SAC. On this basis, an assessment of the site's compatibility from a contamination perspective and whether (or not) further assessment and / or remediation will be derived.
3: Identify the information inputs	Inputs to the investigation will be the results of analysis of samples to measure the concentration of CoPC identified in the CSM (Section 9) at the site using NATA accredited laboratories and methods, where possible. The SAC for each of the CoPC are detailed in Section 11. A photoionization detector (PID) was used on-site to screen soils for VOC. PID readings were used to inform sample selection for laboratory analysis.

Step	Summary
4: Define the study boundaries	The lateral boundaries of the investigation area are shown on Drawing 1, Appendix A. The vertical boundaries are to the extent of contamination impact as determined from the site history assessment and site observations. The assessment is limited to the timeframe over which the field investigation was undertaken. Constraints to the assessment are identified and discussed in the conclusions of the report, Section 14.
5: Develop the analytical approach (or decision rule)	The decision rule is to compare all analytical results with SAC (Section 11, based on NEPC (2013)). Where guideline values are absent, other sources of guideline values accepted by NEPC (2013) shall be adopted where possible. Where a sample result exceeds the adopted criterion, a further site-specific assessment will be made as to the risk posed by the presence of that contaminant(s). Initial comparisons will be with individual results then, where required, summary statistics (including mean, standard deviation and 95% upper confidence limit (UCL) of the arithmetic mean (95% UCL) to assess potential risks posed by the site contamination. Quality control results are to be assessed according to their relative percent difference (RPD) values. For field duplicates, triplicates and laboratory results, RPDs should generally be below 30%; for field blanks and rinsates, results should be at or less than the limits of reporting (NEPC, 2013). The field and laboratory quality assurance assessment is included in Appendix L.
6: Specify the performance or acceptance criteria	Baseline condition: Contaminants at the site and/or statistical analysis of data (in line with NEPC (2013)) exceed human health and environmental SAC and poses a potentially unacceptable risk to receptors (null hypothesis). Alternative condition: Contaminants at the site and statistical analysis of data (in line with NEPC (2013)) complies with human health and environmental SAC and as such, does not pose a potentially unacceptable risk to receptors (alternative hypothesis). Unless conclusive information from the collected data is sufficient to reject the null hypothesis, it is assumed that the baseline condition is true. Uncertainty that may exist due to the above potential decision errors shall be mitigated as follows: As well as a primary screening exercise, the use of the 95% UCL as per NEPC (2013) may be applied, ie: 95% is the defined confidence level associated with the UCL on the geometric mean for contaminant data. The resultant 95%UCL shall subsequently be screened against the corresponding SAC. The statistical assessment will only be able to be applied to certain datasets, such as those obtained via systematic sampling. Identification of areas for targeted sampling will be via professional judgement and errors will not be able to have a probability assigned to them.
7: Optimise the design for obtaining data	As the purpose of the sampling program is to assess for potential contamination across the site, the sampling program is reliant on professional judgement to identify and sample the potentially affected areas. Further details regarding the proposed sampling plan are presented in Section 10.

Appendix G

Field Sampling Methodology

Appendix G
Field Work Methodology
207 Barry Way, Jindabyne

G1.0 Guidelines

The following key guidelines were consulted for the field work methodology:

- NEPC National Environment Protection (Assessment of Site Contamination) Measure 1999 (as amended 2013) [NEPM] (NEPC, 2013).

G2.0 Soil Sampling

Soil sampling is carried out in accordance with DP standard operating procedures. The general sampling and sample management procedures comprise:

- Collect soil samples directly from the excavator bucket at the nominated sample depth;
- Collect near surface samples using the teeth of the excavator bucket to loosen up the upper 0.1 m of soil material. Samples collected by hand (whilst wearing nitrile gloves);
- Transfer samples in laboratory-prepared glass jars with Teflon lined lids by hand, capping immediately and minimising headspace within the sample jar;
- Collect replicate samples in zip-lock bags for PID screening;
- Collect ~40 g to 50 g samples in zip-lock bags for asbestos (presence / absence) analysis;
- Wear a new disposable nitrile glove for each sample point thereby minimising potential for cross-contamination;
- Collect 10% replicate samples for QC purposes. Handfuls of soil were collected from the same area of the surface sample or excavator bucket and distributed evenly between the field sample and replicate sample;
- Label sample containers with individual and unique identification details, including project number, sample location and sample depth (where applicable);
- Place samples into a cooled, insulated and sealed container for transport to the laboratory; and
- Use chain of custody documentation.

Reference was made to HEPA (2020) for requirements specific to PFAS.

G2.1 Field Testing

Field testing is carried out in accordance with DP standard operating procedures. The general sampling and sample management procedures comprise:

PID Field Test

- Calibrate the PID with isobutylene gas at 100 ppm and with fresh air prior to commencement of each successive day's field work;
- Allow the headspace in the PID zip-lock bag samples to equilibrate; and
- Screen using the PID.

Appendix H

Site Assessment Criteria

Appendix H
Site Assessment Criteria
Part Lot 101, DP1019527, Jindabyne

H1.0 Introduction

H1.1 Guidelines

The following key guidelines were consulted for deriving the site assessment criteria (SAC):

- NEPC National Environment Protection (Assessment of Site Contamination) Measure 1999 (as amended 2013) [*the 'NEPM'*] (NEPC, 2013).
- CRC CARE Health screening levels for petroleum hydrocarbons in soil and groundwater (CRC CARE, 2011).

H1.2 General

The SAC applied in the current investigation are informed by the CSM which identified human and environmental receptors to potential contamination at the site. Analytical results are assessed (as a Tier 1 assessment) against the SAC comprising primarily the investigation and screening levels of Schedule B1 of NEPC (2013).

The following inputs are relevant to the selection and/or derivation of the SAC:

- Land use: Proposed school
- Corresponding to land use category 'A', residential with garden / accessible soil (home grown produce <10% fruit and vegetable intake, (no poultry)), also includes children's day care centres, preschools and primary schools.
- Soil type: clay / sand

H2.0 Soils

H2.1 Health Investigation and Screening Levels

The generic health investigation levels (HIL) and health screening levels (HSL) are considered to be appropriate for the assessment of human health risk via all relevant pathways of exposure associated with contamination at the site. The adopted soil HIL and HSL for the contaminants of concern are in Table 1 and
Table 2.

Table 1: Health Investigation Levels (mg/kg)

Notes: TRH F1 is TRH C_6-C_{10} minus BTEX

TRH F2 is TRH >C_{10}-C_{16} minus naphthalene

The soil saturation concentration (Csat) is defined as the soil concentration at which the porewater phase cannot dissolve any more of an individual chemical. The soil vapour that is in equilibrium with the porewater will be at its maximum. If the derived soil HSL exceeds Csat, a soil vapour source concentration for a petroleum mixture could not exceed a level that would results in the maximum allowable vapour risk for the given scenario. For these scenarios, no HSL is presented for these chemicals and the HSL is shown as 'not limiting' or 'NL'

The HSL for direct contact derived from CRC CARE (2011) are in Table 3.

Table 3: Health Screening Levels for Direct Contact (mg/kg)

Contaminant	DC HSL-A

Ethylbenzene	4500
Xylenes	12 000
Naphthalene	1400
TRH F1	4400
TRH F2	3300
TRH F3	4500
TRH F4	6300

Notes: TRH F1 is TRH C_6-C_{10} minus BTEX
TRH F2 is TRH >C_{10}-C_{16} minus naphthalene
IMW intrusive maintenance worker

H2.2 Asbestos in Soil

Based on the CSM and/or current site access limitations, a detailed asbestos assessment was not considered to be warranted at this stage. However, due to the history of widespread use of ACM products across Australia, ACM can be encountered unexpectedly and sporadically at a site. Therefore, the presence or absence of asbestos at a limit of reporting of 0.1 g/kg (AS:4964) has been adopted for this investigation / assessment as an initial screen.

H2.3 Ecological Investigation Levels

Ecological investigation levels (EIL) and added contaminant limits (ACL), where appropriate, have been derived in NEPC (2013) for arsenic, copper, chromium (III), nickel, lead, zinc, DDT and naphthalene. The adopted EIL, derived using the interactive (excel) calculation spreadsheet on the NEPM toolbox website are shown in Table 5, with inputs into their derivation shown in Table 4.

Table 4: Inputs to the Derivation of the Ecological Investigation Levels

Variable	Input	Rationale
Age of contaminants	“Aged” (>2 years)	Potential historical sources only
pH	6.85	Average of results
CEC	10.60 $cmol_c/kg$	Average of results
Clay content	15%	Assumed
Traffic volumes	low	Regional/rural low traffic area
State / Territory	NSW	

Table 5: Ecological Investigation Levels (mg/kg)

Contaminant	EIL-A-B-C
Metals	
Arsenic	100
Copper	210
Nickel	180
Chromium III	460
Lead	1100
Zinc	500
PAH	
Naphthalene	170
OCP	
DDT	180

Notes: EIL-AES area of ecological significance

H2.4 Ecological Screening Levels

Ecological screening levels (ESL) are used to assess the risk of selected petroleum hydrocarbon compounds, BTEX and benzo(a)pyrene to terrestrial ecosystems. Coarse soil type selected due to sand or sandy clay soil types encountered. The adopted ESL are shown in Table 6.

Table 6: Ecological Screening Levels (mg/kg)

Contaminant	Soil Type	EIL-A-B-C
Benzene	Coarse	50
Toluene	Coarse	85
Ethylbenzene	Coarse	70
Xylenes	Coarse	105
TRH F1	Coarse/ Fine	180*
TRH F2	Coarse/ Fine	120*
TRH F3	Coarse	300
TRH F4	Coarse	2800
B(a)P	Coarse	0.7

Notes: ESL are of low reliability except where indicated by * which indicates that the ESL is of moderate reliability
TRH F1 is TRH C_6-C_{10} minus BTEX
TRH F2 is TRH >C_{10}-C_{16} including naphthalene

H2.5 Management Limits

In addition to appropriate consideration and application of the HSL and ESL, there are additional considerations which reflect the nature and properties of petroleum hydrocarbons, including:

- Formation of observable light non-aqueous phase liquids (LNAPL);
- Fire and explosion hazards;
- Effects on buried infrastructure eg: penetration of, or damage to, in-ground services.

Coarse soil type selected due to sand or sandy clay soil types encountered. The adopted management limits are in Table 7.

Table 7: Management Limits (mg/kg)

Contaminant	Soil Type	ML-A-B-C
TRH F1	Coarse	700
TRH F2	Coarse	1000
TRH F3	Coarse	2500
TRH F4	Coarse	10 000

Notes: TRH F1 is TRH C_6-C_{10} including BTEX
TRH F2 is TRH >C_{10}-C_{16} including naphthalene

Additional Info

Sample storage - Waters are routinely disposed of approximately 1 month and soils approximately 2 months from receipt.
Requests for longer term sample storage must be received in writing.
Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.
TAT for Micro is dependent on incubation. This varies from 3 to 6 days.

CERTIFICATE OF ANALYSIS 267874

Client Details

Client	Douglas Partners Canberra
Attention	Shannon Goodsell
Address	Unit 2, 73 Sheppard St,, HUME, ACT, 2620

Sample Details

Your Reference	**103109.03, Jindabyne**
Number of Samples	49 Soil, 4 Material
Date samples received	29/04/2021
Date completed instructions received	30/04/2021

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details

Date results requested by	06/05/2021
Date of Issue	06/05/2021

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Method ID	Methodology Summary
ASB-001	Asbestos ID - Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.
Inorg-001	pH - Measured using pH meter and electrode in accordance with APHA latest edition, 4500-H+. Please note that the results for water analyses are indicative only, as analysis outside of the APHA storage times.
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Inorg-031	Total Phenolics by segmented flow analyser (in line distillation with colourimetric finish). Solids are extracted in a caustic media prior to analysis.
Metals-020	Determination of various metals by ICP-AES.
Metals-020	Determination of exchangeable cations and cation exchange capacity in soils using 1M Ammonium Chloride exchange and ICP-AES analytical finish.
Metals-021	Determination of Mercury by Cold Vapour AAS.
Org-020	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.
Org-020	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis. Note, the Total +ve TRH PQL is reflective of the lowest individual PQL and is therefore "Total +ve TRH" is simply a sum of the positive individual TRH fractions (>C10-C40).
Org-021	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD.
Org-021	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD. Note, the Total +ve PCBs PQL is reflective of the lowest individual PQL and is therefore" Total +ve PCBs" is simply a sum of the positive individual PCBs.
Org-022	Determination of VOCs sampled onto coconut shell charcoal sorbent tubes, that can be desorbed using carbon disulphide, and analysed by GC-MS.
Org-022/025	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS/GC-MSMS.

Method ID	Methodology Summary
Org-022/025	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-MS/GC-MSMS. Note, the Total +ve reported DDD+DDE+DDT PQL is reflective of the lowest individual PQL and is therefore simply a sum of the positive individually report DDD+DDE+DDT.
Org-022/025	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS and/or GC-MS/MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013. For soil results:- 1. 'EQ PQL'values are assuming all contributing PAHs reported as <PQL are actually at the PQL. This is the most conservative approach and can give false positive TEQs given that PAHs that contribute to the TEQ calculation may not be present. 2. 'EQ zero'values are assuming all contributing PAHs reported as <PQL are zero. This is the least conservative approach and is more susceptible to false negative TEQs when PAHs that contribute to the TEQ calculation are present but below PQL. 3. 'EQ half PQL'values are assuming all contributing PAHs reported as <PQL are half the stipulated PQL. Hence a mid-point between the most and least conservative approaches above. Note, the Total +ve PAHs PQL is reflective of the lowest individual PQL and is therefore "Total +ve PAHs" is simply a sum of the positive individual PAHs.
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS.
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.
Org-023	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater. Note, the Total +ve Xylene PQL is reflective of the lowest individual PQL and is therefore "Total +ve Xylenes" is simply a sum of the positive individual Xylenes.

Result Definitions

NT	Not tested
NA	Test not required
INS	Insufficient sample for this test
PQL	Practical Quantitation Limit
<	Less than
>	Greater than
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Quality Control Definitions

Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

The recommended maximums for analytes in urine are taken from “2018 TLVs and BEIs”, as published by ACGIH (where available). Limit provided for Nickel is a precautionary guideline as per Position Paper prepared by AIOH Exposure Standards Committee, 2016.

Guideline limits for Rinse Water Quality reported as per analytical requirements and specifications of AS 4187, Amdt 2 2019, Table 7.2

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals (not SPOCAS); 60-140% for organics/SPOCAS (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Samples for Microbiological analysis (not Amoeba forms) received outside of the 2-8°C temperature range do not meet the ideal cooling conditions as stated in AS2031-2012.

Report Comments

Asbestos: A portion of the supplied sample was sub-sampled for asbestos analysis according to Envirolab procedures.
We cannot guarantee that this sub-sample is indicative of the entire sample. Envirolab recommends supplying 40-50g of sample in its own container.
Note: Samples were sub-sampled from jars provided by the client.

pH ran outside of recommended holding time.

8 metals in soil - # Percent recovery is not possible to report due to the inhomogeneous nature of the elements in the samples. However an acceptable recovery was obtained for the LCS.

Appendix L
Data Quality Assurance and Quality Control
Part Lot 101, DP1019527, Jindabyne

L1.0 Field and Laboratory Data Quality Assurance and Quality Control

The field and laboratory data quality assurance and quality control (QA/QC) procedures and results are summarised in the following Table 1. Reference should be made to the field work methodology and the laboratory results / certificates of analysis for further details. The relative percentage difference (RPD) results, along with the other filed QC samples are included at end of this appendix (Tables QA1 to QA3).

DP considered the need for inter-laboratory duplicate samples to be analysed, however at the time of preparing the proposal fee, DP did not anticipate that the site would be audited or that the investigation would be conducted through a regulatory authority. Therefore, DP considered it appropriate to only submit intra-laboratory duplicates for analysis at the time for this PSI-L.

The walkover and the desktop information indicated that significant contamination within the site was unlikely, however, trip blanks and trip spikes were used and analysed as a precautionary measure. Chemical analysis of primary samples indicated that there was a low risk of contamination within the site and therefore, the need for future trip blanks and trip spikes would be considered unnecessary.

Table 1: Field and Laboratory Quality Control

Item	Evaluation / Acceptance Criteria	Compliance
Analytical laboratories used	NATA accreditation	C
Holding times	Various based on type of analysis	C
Intra-laboratory replicates	18% of primary samples (6 replicates for 33 primary); <30% RPD	C
Trip Blanks	1 per sampling event; <PQL (refer to Table QA2)	C
Trip Spikes	1 per sampling event; 60-140% recovery (refer to Table QA3)	C
Laboratory / Reagent Blanks	1 per batch; <PQL	C
Matrix Spikes	1 per lab batch; 70-130% recovery (inorganics); 60-140% recovery (organics)	C
Surrogate Spikes	All organics analysis; 70-130% recovery (inorganics); 60-140% recovery (organics)	C
Control Samples	1 per lab batch; 70-130% recovery (inorganics); 60-140% recovery (organics)	C

Standard Operating Procedures (SOP)	Adopting SOP for all aspects of the sampling field work	C

Notes: C = compliance; PC = partial compliance; NC = non-compliance

The RPD results were all within the acceptable range, with the exception of those indicated in Table QA1 (provided at the end of the appendix). The exceedances are not, however, considered to be of concern given that:

- The typically low actual differences in the concentrations of the replicate pairs where some RPD exceedances occurred, particularly for in instances where a non detection has been reported in the replicate pair;
- The number of replicate pairs being collected from fill soils which by its nature is heterogeneous;
- Replicates, rather than homogenised duplicates, were used to minimise risk of volatile loss, hence greater variability can be expected;
- Most of the recorded concentrations being relatively close to the PQL;
- The majority of RPDs within a replicate pair being within the acceptable limits; and
- All other QA/QC parameters met the DQIs.

In summary, the QC data is determined to be of sufficient quality to be considered acceptable for the assessment.

L2.0 Data Quality Indicators

The reliability of field procedures and analytical results was assessed against the following data quality indicators (DQIs) as outlined in NEPC *National Environment Protection (Assessment of Site Contamination) Measure 1999 (as amended 2013) [the 'NEPM']* (NEPC, 2013):

- Completeness: a measure of the amount of usable data from a data collection activity;
- Comparability: the confidence (qualitative) that data may be considered to be equivalent for each sampling and analytical event;
- Representativeness: the confidence (qualitative) of data representativeness of media present on-site;
- Precision: a measure of variability or reproducibility of data; and
- Accuracy: a measure of closeness of the data to the 'true' value.

Table 2: Data Quality Indicators

Data Quality Indicator	Method(s) of Achievement
Completeness	Systematic and selected target locations sampled.
	Preparation of test pit logs, sample location plan and chain of custody records.

Data Quality Indicator	Method(s) of Achievement
	Laboratory sample receipt information received confirming receipt of samples intact and appropriateness of the chain of custody.
	Samples analysed for contaminants of potential concern (COPC) identified in the Conceptual Site Model (CSM).
	Completion of chain of custody (COC) documentation.
	NATA accredited laboratory results certificates provided by the laboratory.
	Satisfactory frequency and results for field and laboratory quality control (QC) samples as discussed in Section 1.
Comparability	Using appropriate techniques for sample recovery, storage and transportation, which were the same for the duration of the project.
	Experienced sampler(s) used.
	Use of NATA registered laboratories, with test methods the same or similar between laboratories.
	Satisfactory results for field and laboratory QC samples.
Representativeness	Target media sampled.
	Sample numbers recovered and analysed are considered to be representative of the target media and complying with DQOs.
	Samples were extracted and analysed within holding times.
	Samples were analysed in accordance with the COC.
Precision	Field staff followed standard operating procedures.
	Acceptable RPD between original samples and replicates.
	Satisfactory results for all other field and laboratory QC samples.
Accuracy	Field staff followed standard operating procedures.
	Satisfactory results for all field and laboratory QC samples.

Based on the above, it is considered that the DQIs have been generally complied with.

L3.0 Conclusion

Based on the results of the field QA and field and laboratory QC, and evaluation against the DQIs it is concluded that the field and laboratory test data obtained are reliable and useable for this assessment.
