Validation Report

JBS&G 66105 | 159,245 Rev 1

26 July 2024

We acknowledge the Traditional Custodians of Country throughout Australia and their connections to land, sea and community.

We pay respect to Elders past and present and in the spirit of reconciliation, we commit to working together for our shared future.

Caring for Country The Journey of JBS&G
Artist: Patrick Caruso, Eastern Arrernte

Executive Summary

JBS&G Australia Pty Ltd (JBS&G) was engaged by Frasers Property Industrial Pty Ltd (Frasers, the client), to undertake remediation and validation activities for land located at 155-251 Aldington Road, Kemps Creek, NSW (the site). The area, address and legal Lots and Deposited Plans (DPs) identifiers of the properties which comprise the site are detailed in **Table 1.1.**

The site is owned by Frasers, and is proposed to be redeveloped for a series of open plan warehouses and associated infrastructure (hardstand pavement, car parks, loading docks etc), and is consistent with a commercial/industrial (NEPC 2013[1]) land use scenario.

A State Significant Development Application (SSDA) has previously been submitted for the construction, fit-out and operation of two warehouse and distribution buildings, including offices, loading docks, parking and hardstand areas, landscaping, utilities and services. Associated works include demolition, vegetation removal, bulk earthworks, construction of internal roads, and an access road off Aldington Road, as well as a 9-lot Torrens Title subdivision. A Remedial Action Plan (RAP) was prepared specific to the development proposal, as documented in JBS&G (2022[2]) and submitted with the SSDA.

An amendment to the SSDA is proposed to be submitted, with the key development differences comprising:

- A 15 Lot Torren Title Subdivision;
- Estate wide civil and infrastructure works;
- Construction of 8 new warehouses; and
- An ancillary civil works zone located on the southern portion of 141 to 153 Aldington Road, Kemps Creek, NSW 2178.

As such, the RAP was updated (JBS&G 2024[3]), to reflect the current redevelopment plans and to address specific remedial measures, site management requirements and the validation approach in relation to works to be undertaken in the Ancillary Works Zone to ensure that the site, upon completion of remedial works, will be suitable for the proposed development.

Validation of remedial works at the site was completed by JBS&G in accordance with the RAP (JBS&G 2024) to demonstrate the successful remediation and demonstrate that the site is suitable for the proposed commercial and industrial land use (unencumbered by contamination management plans or similar instrument) in accordance with guidelines made or approved by the NSW Environment Protection Authority (EPA).

Remediation included the on-site surface treatment of approximately 7,500 m^3 of bonded asbestos impacted material and the manual removal (via spreading/hand picking) of ACM fragments. Approximately 50 m^3 of material identified to be impacted with AF/FA was disposed off-site to a facility lawfully able to accept such materials, and removal and disposal of deeper identified asbestos material at TP460 and TP463, as well as hydrocarbon impacted material at TP398. Validation of remedial works were conducted by JBS&G in accordance with the requirements of the RAP.

---

1 *National Environmental Protection Measure – Assessment of Site Contamination (ASC),* National Environmental Protection Council, 2013 (NEPC 2013)

2 *Remedial Action Plan – Aldington Road Estate 155-167, 169-181, 183-197, 199, 201-217, 219-233 and 235-251 Aldington Road, Kemps Creek, NSW*. JBS&G Australia Pty ltd reference 60482/153876 dated 16 March 2022. JBS&G (2022).

3 *Remedial Action Plan – Aldington Road Estate, Edge South Development, Aldington Road, Kemps Creek, NSW*. JBS&G Australia Pty Ltd reference 65376/157278 dated 5 February 2024 Rev 2, JBS&G (2024).

During remedial works, additional unexpected finds were identified including an asbestos pipe in Area 1A, and deeper asbestos impacts within Area 1B. The asbestos pipe was removed and disposed of by Ford Civil, the UF1 in Area 1B was excavated and spread for picking, before being disposed of off-site after a friable asbestos detection in a validation sample. After removal, both areas were validated in accordance with the RAP (JBS&G 2024).

Based on the results of the remediation and validation of the site described herein, and subject to the limitations described in **Section 11**, JBS&G considers that the site has been remediated and is suitable for the proposed commercial/industrial land use, without the requirement for ongoing management.

It is recommended that the unexpected finds protocol presented in the RAP (2024) is utilised throughout earthworks.

1. Introduction and Objectives

1.1 Introduction

JBS&G Australia Pty Ltd (JBS&G) was engaged by Frasers Property Industrial Pty Ltd (Frasers, the client), to undertake remediation and validation activities for land located at 155-251 Aldington Road, Kemps Creek, NSW (the site, see **Figure 1**). The area, address and legal Lots and Deposited Plans (DPs) identifiers of the properties which comprise the site are detailed in **Table 1.1** and are shown on **Figure 2**.

Table 1.1 Site Identification Details

Lot/DP	Address	Area (ha)
Aldington Road – Edge South		
33/258949	155 to 167 Aldington Road, Kemps Creek, NSW, 2178	10.1
28/255560	169 to 181 Aldington Road, Kemps Creek, NSW, 2178	10.2
27/255560	183 to 197 Aldington Road, Kemps Creek, NSW, 2178	10.2
26/255560	199 Aldington Road, Kemps Creek, NSW, 2178	2.6
25/255560	201 to 217 Aldington Road, Kemps Creek, NSW, 2178	10.2
24/255560	219 to 233 Aldington Road, Kemps Creek, NSW 2178	10.2
10/253503	235 to 251 Aldington Road, Kemps Creek, NSW 2178	10.1
Approximate Site Area (ha)		63.6
Ancillary Works Zone		
Part 34/258949	141 to 153 Aldington Road, Kemps Creek, NSW 2178	10.1

The properties which comprise the site have been the subject of a number of previous environmental investigations as summarised in **Section 43** and shown on **Figures 3A** to **3E**). Contamination conditions have been identified by previous investigations which are to be addressed to make the site suitable for the proposed commercial/industrial purposes.

The site is owned by Frasers, and is proposed to be redeveloped to contain a series of open plan warehouses and associated infrastructure (hardstand pavement, car parks, loading docks etc), and is consistent with a commercial/industrial (NEPC 2013[4]) land use scenario.

A State Significant Development Application (SSDA) has previously been submitted for the construction, fit-out and operation of two warehouse and distribution buildings, including offices, loading docks, parking and hardstand areas, landscaping, utilities and services. Associated works include demolition, vegetation removal, bulk earthworks, construction of internal roads, and an access road off Aldington Road, as well as a 9-lot Torrens Title subdivision. A Remedial Action Plan (RAP) was prepared specific to the development proposal, as documented in JBS&G (2022[5]) and submitted with the SSDA.

An amendment to the SSDA is proposed to be submitted, with the key development differences comprising:

- A 15 Lot Torren Title Subdivision;
- Estate wide civil and infrastructure works;
- Construction of 8 new warehouses; and

[4] *National Environmental Protection Measure – Assessment of Site Contamination (ASC),* National Environmental Protection Council, 2013 (NEPC 2013)

[5] *Remedial Action Plan – Aldington Road Estate 155-167, 169-181, 183-197, 199, 201-217, 219-233 and 235-251 Aldington Road, Kemps Creek, NSW*. JBS&G Australia Pty ltd reference 60482/153876 dated 16 March 2022. JBS&G (2022).

- An ancillary civil works zone located on the southern portion of 141 to 153 Aldington Road, Kemps Creek, NSW 2178.

As such, the RAP was updated (JBS&G 2024[6]), to reflect the current redevelopment plans and to address specific remedial measures, site management requirements and the validation approach in relation to works to be undertaken in the Ancillary Works Zone to ensure that the site, upon completion of remedial works, will be suitable for the proposed development.

Validation of remedial works at the site was completed by JBS&G in accordance with the RAP (JBS&G 2024) to demonstrate the successful remediation and demonstrate that the site is suitable for the proposed commercial and industrial land use (unencumbered by contamination management plans or similar instrument) in accordance with guidelines made or approved by the NSW Environment Protection Authority (EPA).

This validation assessment has been undertaken in accordance with guidelines made or approved by the NSW EPA.

1.2 Objective

The objectives of the Validation Report are to:

- Demonstrate remediation of the site, including off-site disposal of impacted materials and on-site treatment of material were completed in accordance with the RAP (JBS&G 2024); and
- Demonstrate that the successful validation of the site indicates that the site is suitable for commercial and industrial land use (encumbered by any contamination management plans or similar instrument), pursuant to the NEPC (2013).

1.3 Scope of Works

The following scope of works were undertaken by JBS&G:

- Supervision of the excavation of impacted soils to the lateral and vertical extents of identifiable impact, with additional removal of soils where additional impacts were identified;
- Supervision of the disposal of impacted material off-site via trucks;
- Supervision of the on-site treatment of impacted material by Ford Civil and/or its appointed subcontractor/s;
- Inspection, validation sampling and laboratory analysis of representative samples of asbestos picked surfaces and residual soils at the base and walls of the excavations in accordance with JBS&G (2024) and relevant NSW EPA guidelines;
- Documentation of the validation process; and
- The preparation of a validation report detailing the remedial and validation works in accordance with relevant NSW EPA guidelines.

[6] *Remedial Action Plan – Aldington Road Estate, Edge South Development, Aldington Road, Kemps Creek, NSW*. JBS&G Australia Pty Ltd reference 65376/157278 dated 5 February 2024 Rev 2, JBS&G (2024).

2. Site Conditions and Surrounding Environment

The site location and layout are shown in **Figures 1** and **2,** respectively. Site details are summarised in **Table 2.1** and described further in the following sections.

Table 2.1: Summary of Site Details

Lot – DP Address (as shown on Error! Reference source not found.**)**	Lot 33 DP258949 – 155 to 167 Aldington Road, Kemps Creek, NSW, 2178 Lot 28 DP255560 – 169 to 181 Aldington Road, Kemps Creek, NSW, 2178 Lot 27 DP255560 – 183 to 197 Aldington Road, Kemps Creek, NSW, 2178 Lot 26 DP255560 – 199 Aldington Road, Kemps Creek, NSW, 2178 Lot 25 DP255560 – 201 to 217 Aldington Road, Kemps Creek, NSW, 2178 Lot 24 DP255560 – 219 to 233 Aldington Road, Kemps Creek, NSW, 2178 Lot 10 DP253503 – 235 to 251 Aldington Road, Kemps Creek, NSW, 2178 Part Lot 34 DP258949 – 141 to 153 Aldington Road, Kemps Creek, NSW, 2178

Approximate Assessment Area Co-ordinates (MGA 56)	As shown on Error! Reference source not found.
Approximate Area	~74 ha (legal properties) ~65 ha (the Site)
Current Zoning	Western Sydney Employment Area 2009
Current Land Use	Rural Residential / Agricultural
Previous Land Use	Rural Residential / Agricultural
Proposal Land Use	Commercial / Industrial

2.1 Site Description (Before Remediation)

A detailed description of the site conditions prior to demolition and remediation was documented in the Detailed Site Investigation (DSI) and RAP (JBS&G 2022b[7] and 2024 respectively) and is provided below. The site layout and key features at the time of investigation are shown on **Figure 2.**

The site consists of seven whole Lots and one part Lot, all with rural residential housing and associated outbuildings (sheds, chicken coops and stables). Approximately half of the site was composed of pastoral grazing land, with the other half comprising horticultural market gardens that were operational at the time of the DSI site inspection (2022). Several dams were present on the site with one in the south-western portion of the site, and dry at the time of the investigations. Dams were used for stock and horticultural irrigation purposes.

Of note across the site were several areas with ACM on the ground surface (AEC 1a and 1e) and affixed to stockpiled concrete slabs (≈5 m^3, AEC 6c), an area of stockpiled material (≈ 6,100 m^3) within the south-eastern portion, disturbed terrain with some small stockpiles (<5 m^3), and an area of stained gravel in the south-western, and two above ground storage tanks (ASTs) within Lot 27.

[7] *Detailed Site Investigation – Aldington Road Estate 155-167, 169-181, 183-197, 199, 201-217, 219-233 and 235-251 Aldington Road, Kemps Creek, NSW*. JBS&G Australia Pty Ltd reference 60482/143618 Revision A dated 16 March 2022. JBS&G (2022b).

Lot 34, of which the southern portion is part of the site, comprises a broadly undeveloped parcel of land. Two dams were present within the property, in addition to an access driveway from Aldington Road. The central/eastern portion of the property was occupied by a rural residential area and included multiple rural residence structures, a swimming pool, vegetable/fruit garden, animal shelters and yards.

2.2 Surrounding Land Use

The current land uses of adjacent properties or properties across adjacent roadways are summarised below.

- North – the balance of Lot 34 and then rural residential and agricultural properties;
- East – Aldington Road, across which are rural residential and agricultural properties, and a construction site opposite 219-233 Aldington Road;
- South – rural residential and agricultural properties; and
- West – rural residential and agricultural properties. Further west lies Mamre Road, across which are currently rural residential and agricultural properties.

2.3 Environmental Setting

The environmental setting of the site is presented in **Table 2.2** and is based on site information presented summarised in JBS&G (2022b).

Table 2.2 Summary of Environmental Characteristics

Environmental Aspect	Characteristics
Topography	A review of topographical information (NSW Sixmaps, LPI[8]) indicates that the site is located within a gently undulating regional topography with a gentle downward slope towards Kemps Creek located approximately 0.6 km to the south west of the site. Ground levels of approximately 96 m Australian Height Datum (AHD) are present near the northern site extent falling to approximately 50 m AHD within the southwestern site extent towards the drainage/creek line and Kemps Creek.
Geology/Soil	Review of the 1:100 000 Geological Series Sydney Geological Survey of NSW Sheet 9030 (DMR 1991[9]) indicates that site is underlain by Wianamatta Group Bringelly Shale, which is described as shale, carbonaceous claystone, laminate, fine to medium grained lithic sandstone, rare coal and tuff. Reference to the online ESPADE 2.1[10] tool indicates that most of the site is covered with Blacktown Residual soils with Luddenham Erosional soils present in the northeast portion of the site. Blacktown Residual soils are described as comprising shallow to moderately deep (>100 cm) hard setting mottled texture contrast soils, red and brown podzolic soils on crests grading to yellow podzolic soils on lower slopes and in drainage lines. Limitations of these soils include localised seasonal waterlogging, localised water erosion hazard, moderately reactive highly plastic subsoil, localised surface movement potential. Luddenham Erosional soils are described as comprising Shallow dark podzolic soils on crests, moderately deep red podzolic soils on upper slopes, yellow podzolic and prairie soils on lower slopes and drainage lines. Limitations of these soils include water erosion hazard, localised steep slopes, localised mass movement hazard, localised surface movement potential, moderately reactive, localised impermeable highly plastic subsoil.

[8] *Land and Property Information, Spatial Information Exchange website*, http://maps.six.nsw.gov.au/ accessed 24 May 2019.
[9] *Penrith Geological Series Sheet 9030 (Edition 1) 1983*. Geological Survey of NSW, Department of Mineral and Resources (DMR 1991)
[10] *ESPADE 2.1, https://www.environment.nsw.gov.au/eSpade2Webapp,* accessed 12 December 2021

Acid Sulfate Soils (ASS)	Review of accessible data using the SEED[11] tool, indicates the area occupied by the site is within an area not assessed for the presence of Acid Sulfate Soils (ASS). Such sites are identified by default, as areas where land management activities are not likely to be affected by ASS materials. Review of the geographical and topographical location of the assessment area, in addition to the geological conditions identified at the site has indicated that the likelihood of ASS within the area is low.
Hydrology	Surface water runoff mostly enters ephemeral creek lines to the west and south of the site, which discharge into Kemps Creek, approximately 600 m southwest of the site. Kemps Creek is a tributary of the Hawkesbury River. The site is mostly unsealed, therefore, precipitation falling onto the site is expected to infiltrate surface soils at a rate reflective of the permeability of the underlying site soils. In periods of heavy or prolonged rainfall, following surface soil saturation, excess water movement is expected to follow the ephemeral creek lines to the west and south of the site, following the topographic gradient. During the site inspection, several dams were observed across the site. These water bodies were identified to be predominately utilised for irrigation.
Hydrogeology	The search identified no groundwater bores to be located within a 1.5 km radius of the site. It is noted that the desktop search did not indicate licensed groundwater bores to be present on the site. This was consistent with the site inspection. Perched (saline) groundwater may be present within localized (shallow) filled areas and generally within the soils in the lower landscape above shale bedrock. Saline groundwater is also anticipated at relatively shallow depths in the lower landscape portions of the site, hosted by fracturing / jointing of the Wianamatta Shales. Given the site is underlain by low permeability clays and shales, the potential for groundwater movement is likely to be low. Groundwater levels were measured within monitoring wells during the JBS&G investigations identified groundwater at depths between 1.981 m and 2.540 m below top of casing (btoc) in clay/weathered shale. A review of monitoring well boreholes indicated weathered shale was noted to be wet at between 4.8 m and 7.9 m below ground surface (bgs). Therefore, groundwater levels in monitoring wells are assumed related to accumulation of seepage and confining pressure influence. Groundwater flow is inferred to be towards the south west/west following local topography towards Kemps Creek. It is noted that groundwater was not encountered during advancement of soil locations during the investigations. The potential for stock watering or irrigation would be limited due to the saline nature and limited flow of shallow groundwater.
Salinity	The site is shown on the Salinity Potential Map for Western Sydney (DIPNR 2002[12]) to lie within an area of moderate salinity potential, with high salinity potential occurring in the vicinity of creek and drainage lines. PSM (2019) undertook salinity testing within a portion of the site and reported soils to be non-saline to moderately saline.
Meteorology	Averaged climatic data indicated the site's meteorological setting is characterised by average minimum temperatures which vary from 4.1 ^{o}C in July to 17.3 ^{o}C in February; average maximum temperatures which vary from 17.5 ^{o}C in July to 30.3 ^{o}C in January; average annual rainfall of approximately 671 mm with rainfall greater than 1 mm occurring on an average of 67 days per year; and monthly rainfall varing from 23 mm in September to 95 mm in February.

11 https://www.seed.nsw.gov.au/ accessed 12 April 2021

3. Site History

A detailed review of historical data is presented in JBS&G (2022b[13] and 2022c[14]).

The Edge South development site historically comprised a single property, used for pastoral/agricultural purposes, with a sole residential building in the south-west corner. In 1978, the Edge South development site was subdivided into five smaller properties, with the primary use comprising agricultural, horticultural and residential activities. Rural residential dwellings and associated buildings/sheds have been constructed and demolished/removed at various times. Market garden operations have occurred continuously at Lot 25 and at various times on Lot 28. Smaller scale horticulture has occurred on Lot 33. Stockpiling of various wastes has occurred at Lots 25, 27, 28 and 33. Importation of fill material has occurred at Lots 25 and 27. Dams were identified on the site since 1955 and on all lots in the Edge South development site since 1982.

The Ancillary Works Zone has been used for agricultural (grazing) uses since the beginning of records and for rural residential purposes since 1979. The central western dams on 129 Aldington Road were constructed between 1955 and 1965. Residential areas and remaining dams were constructed across the site between 1978 and 1986.

A review of records held by the NSW EPA indicate no prevention, clean-up or prohibition notices, no transfer, variation, suspension, surrender or revocation of an environmental protection licences, no notices have been issued for the site under the *Contaminated Land Management Act 1997 (CLM Act)*, the site has not been notified to the EPA under section 60 of the *CLM Act* with regards to contamination, and the site is not on the EPA Per- and Poly- Fluoroalkyl Substances (PFAS) register.

The investigation reports above were summarised and reviewed as part of the RAP (JBS&G 2024) to inform the requirements for remediation of the site.

4.2 Areas of Environmental Concern (AEC)

The previous assessments have been completed on the site as detailed in **Section 4.1**, and based on the investigations the following contamination issues requiring remediation have been identified:

- Elevated hydrocarbons above the adopted land use criteria within a distinct silty gravel fill layer at TP398 (approximate volume 15 m^3); and
- ACM identified in surficial soils (<0.1 m bgs) and affixed to stockpiled concrete slabs below the adopted health criteria, but representing an aesthetic issue at AEC 1a, 1b (BH412_0.0- 0.4), 1e and 6c (affixed to stockpiled concrete slabs) and the residential/buildings area of 219-233 and 235-251 Aldington Road.

Although not a contamination issue due to being below applicable site human health criteria, the following aspects were identified to present a potential aesthetic issue requiring management:

- Asbestos identified within site structures at AEC 1a, 1c, 1d and within the south-eastern portion of 219-233 Aldington Road (AEC 1X);
- ACM identified below the adopted health criteria in sub surface soils (> 0.1 m bgs) at AEC 1f/3c (TP460_2.0-2.6 and TP463_0.8-1.8) and
- ASTs across the site were anticipated to be removed in conjunction with site structure removal. Following which visual inspection to confirm no staining or odours was to be undertaken.

Remedial and management extents are shown on the **Figure 3** series.

In summary, the AECs and associated contaminants of concern are listed in **Table 4.2** and presented on the **Figure 3** series.

Table 4.2: Areas of Environmental Concern and Associated Contaminants of Concern

AEC	Impact	Contaminants of Concern
AEC 1a, 1b, 1e, 6c and AEC 1x (Residential Soils at 219-233 and 235-251 Aldington Road)	Asbestos bonded on surface, and affixed to concrete slabs (6C)	Asbestos
TP398	Elevated hydrocarbons and PAH	TRH/BTEX, Heavy Metals, PAH, Phenols
TP460 and TP463	Bonded asbestos identified in test pits.	Asbestos
AEC 1a, 1c, 1d and 1x	Bonded asbestos in site structures.	Asbestos
ASTs	Potential for hydrocarbon impact	TRH/BTEX, lead, phenols

4.3 Remedial Approach

A number of potential remedial options were considered in the RAP (JBS&G 2024). The preferred remedial strategy for the site was identified as:

- Manual picking of surficial ACM (AEC 1a, 1b and 1e) and the residential/buildings area of 219-233 and 235-251 Aldington Road (1X), with the ACM fragments disposed to a landfill/licensed waste facility;
- Offsite disposal of concrete slabs with affixed ACM (AEC 6c); and
- Excavation and offsite disposal of hydrocarbon impacted material at TP398 (≈ 15 m^3) to an appropriately licensed waste facility.

5. Data Quality Objectives

5.1 Overview

Validation data was required to be collected to verify the effectiveness of the remedial works and document the final site condition as being suitable for the proposed future use. As such, data quality objectives (DQOs) were developed for the validation assessment, as discussed in the following sections.

Validation activities were required for the following aspects:

- Collection of appropriate environmental data from excavations formed by the removal of contaminated soils;
- Collection of appropriate environmental data from soils to be treated/remediate on site, for beneficial re-use;
- Collection of appropriate environmental data from soils to be disposed of off-site or imported to the site;
- Tracking the movement of all soil and fill material on site;
- Tracking the movement of waste materials requiring off-site disposal; and
- Validation of any unexpected finds.

Previous investigations have identified fill materials impacted with asbestos that present a potential human health risk. Remediation is required as outlined in **Section 4**, for the site to be made suitable for commercial/industrial land use without ongoing management (encumbered by environmental management plan or similar instrument).

During remediation activities, sufficient validation of site activities is required to demonstrate that the identified health-based risks to site users and aesthetic issues have been adequately managed to render the site suitable for the proposed land use.

5.1.1 Identify the Decision

The decisions which are required to be made for validation of the site are:

1. Are contaminant concentrations in remedial excavations above the adopted site remediation criteria?
2. Are there any aesthetic issues remaining following remediation works?
3. Are there any outstanding regulatory compliance issues associated with site remediation activities?
4. Is the site considered suitable for the proposed use without the requirement for ongoing management?

During the remediation activities, sufficient validation of site activities is required to demonstrate that the identified environmental and health-based risks to future use(s) of the site have been adequately managed to render the site suitable for the proposed land use.

5.1.2 Identify Inputs to the Decision

The inputs to the decision are:

- Field observations in relation to inspection of all excavation bases, walls, surface material, stockpile footprints upon completion of remedial works for ACM, odours, discolouration, and other indicators of potential contamination;
- Soil validation analysis data collected from excavation bases, walls, surface material, and the exposed ground surface following excavation of stockpiles (where applicable) upon completion of remedial works;

- Waste classification and material characterisation data obtained during assessment of fill material prior to and during remediation works;
- Field observations, sampling and analytical data of any unexpected finds/additional characterisation activities;
- Disposal dockets and relevant documents in relation to appropriate disposal of material to be removed from site as part of the remediation works (landfill dockets, beneficial reuse / recycling dockets, trade waste disposal, etc.);
- Relevant guideline criteria for validation and waste classification; and
- Data quality indicators (DQIs) as assessed by quality assurance / quality control (QA/QC).

5.1.3 Define the Study Boundaries

The overall study boundary of the site as identified **Table 1.1**.

The remediation areas are outlined in **Table 5.1** and are shown on the **Figure 3** series. The remedial areas subject to remediation as part of the remedial works outlined herein are defined in **Section 4.2** .

The lateral and vertical extents of areas subject to remediation are detailed in **Table 5.1** below and are shown on the **Figure 3** series.

Table 5.1: Excavation and Stockpile Remedial Extents

Remediation Area	Quantity Approx.	Description	Contaminant	Waste Classification	Remedial Strategy
AEC 1a, 1b, 1e, 6c, and 1x	7,750 m^2	Bonded ACM in surficial soils	Asbestos	NA	On-site treatment
TP398	30 m^3	Fill with Hydrocarbons and PAHs above the land use criteria	TRH and PAH	GSW	Off-site disposal
TP460 and TP463	125 m^3	Fill with Bonded ACM detected	Asbestos	Special Waste (SW) (asb)/GSW	Off-site disposal
AEC 6C	8 m^3 Concrete / 50 m^3 Grass	Bonded ACM affixed to concrete slabs and entrained within vegetation roots.	Asbestos and aesthetic impacts (Concrete slab portions)	Special Waste (asb)/GSW	Off-site disposal
AEC UF1, 1e, 6c and 1x	50 m^3	Asbestos AF/FA detected during validation sampling	Asbestos	Special Waste (asb)/GSW	Off-site disposal
Asbestos Pipe	25 m length	Asbestos ACM pipe	Asbestos	Special Waste (asb)	Off-site disposal

In practice, the lateral and vertical extents of the remedial excavations were determined via validation activities including observations by the field scientist and soil samples / data that satisfy the adopted validation criteria (**Section 5.3**).

The temporal boundaries of this investigation was limited to the period of field works up to the time that validation samples were collected and analysed.

5.1.4 Decision Rules

The decision rules adopted to answer the decisions identified in **Section 5.1.2** are discussed below.

Table 5.2 Summary of Decision Rules

Decision Required to be Made	Decision Rule
1. Are contaminant concentrations in remedial excavations above the adopted site remediation criteria?	Soil analytical data for chemical COPCs will be compared against the adopted criteria in the RAP. For the validation sample sets, statistical analysis of the data will be undertaken in accordance with relevant guidance documents, as appropriate, to facilitate the decisions. The following statistical criteria will be adopted with respect to soils: Either: the reported concentrations will be below the site criteria; Or, the 95% Upper Confidence Limit (UCL) of the average concentration for each analyte will be below the adopted health-based site criterion, no single analyte concentration will exceed 250% of the adopted health based site criterion, and the standard deviation of the results will be less than 50% of the site health based criterion. Analytical results for asbestos in soils will be directly compared to the site criteria. No statistical assessment for asbestos in soils will be undertaken. If the statistical criteria stated above are satisfied, the answer to the decision will be **No**. If the statistical criteria are not satisfied, the answer to the decision will be **Yes**.
2. Are there any aesthetic issues remaining following remediation works?	If there are any remaining unacceptable odours, soil inclusions or soil discolouration, the answer to the decision will be **Yes**. Otherwise, the answer to the decision will be **No**.
3. Are there any outstanding regulatory compliance issues?	Qualitative assessment of the works in relation to regulatory approvals will be undertaken during and following the completion of remediation activities. If this review identifies non-compliance or outstanding issues the answer to the decision will be **Yes**. Otherwise, the answer to the decision will be **No**.
4. Is the site considered suitable for the proposed use (without ongoing management)?	Was the answer to any of the above decisions Yes? If the answer was Yes, then the answer to the decision questions is **No** and additional works are required to achieve the RAP objective. If there are no outstanding issues or residual contamination, then the answer to the decision questions will be **Yes**.

5.1.5 Specify Limits of Decision Error

This step is to establish the decision maker's tolerable limits on decision errors, which are used to establish performance goals for limiting uncertainty in the data. Data generated during this project must be appropriate to allow decisions to be made with confidence.

Specific limits for this project have been adopted in accordance with the appropriate guidance from the NSW EPA, NEPC (2013), appropriate indicators of data quality (DQIs used to assess quality assurance / quality control) and standard JBS&G procedures for field sampling and handling.

To assess the usability of the data prior to making decisions, the data will be assessed against pre-determined DQIs for to precision, accuracy, representativeness, comparability, completeness and sensitivity (PARCCS parameters). The acceptable limit on decision error is 95% compliance with DQIs.

The pre-determined DQIs established for the project are discussed below in relation to the PARCCS parameters, and are expanded in **Table 5.3**.

- **Precision** - measures the reproducibility of measurements under a given set of conditions. The precision of the laboratory data and sampling techniques is assessed by calculating the Relative Percent Difference (RPD[15]) of duplicate samples.
- **Accuracy** - measures the bias in a measurement system. The accuracy of the laboratory data that are generated during this study is a measure of the closeness of the analytical results obtained by a method to the 'true' value. Accuracy is assessed by reference to the analytical results of laboratory control samples, laboratory spikes and analyses against reference standards.
- **Representativeness** –expresses the degree which sample data accurately and precisely represent a characteristic of a population or an environmental condition. Representativeness is achieved by collecting samples on a representative basis across the site, and by using an adequate number of sample locations to characterise the site to the required accuracy.
- **Comparability** - expresses the confidence with which one data set can be compared with another. This is achieved through maintaining a level of consistency in techniques used to collect samples; and ensuring analysing laboratories use consistent analysis techniques; and reporting methods.
- **Completeness** – is defined as the percentage of measurements made which are judged to be valid measurements. The completeness goal is set at there being sufficient valid data generated during the study.
- **Sensitivity** – expresses the appropriateness of the chosen laboratory methods, including the limits of reporting, in producing reliable data in relation to the adopted site assessment criteria.

15 $$RPD(\%) = \frac{|C_o - C_d|}{C_o + C_d} \times 200$$

Where C0 is the analyte concentration of the original sample
Cd is the analyte concentration of the duplicate sample

Table 5.3 Summary of Data Quality Indicators

Data Quality Indicators	Frequency	Data Quality Criteria
Precision		
Split duplicates (intra laboratory)	1 / 20 samples	<50% RPD[1]
Blind duplicates (inter laboratory)	1 / 20 samples	<50% RPD[1]
Laboratory Duplicates	1 / 20 samples	<50% RPD[1]
Accuracy		
Surrogate spikes	All organic samples	70-130% recovery
Laboratory control samples	1 per lab batch	70-130% recovery
Matrix spikes	1 per lab batch	70-130% recovery
Representativeness		
Sampling appropriate for media and analytes	All samples	-[2]
Samples extracted and analysed within holding times.	All samples	Soil: organics (14 days), inorganics (6 months) Water: organics (7 days to extract and 14 days to analyses). Metals (6 months)
Laboratory Blanks	1 per lab batch	<LOR
Trip spike	1 per lab batch	70-130% recovery
Storage blank	1 per lab batch	<LOR
Rinsate sample	1 per sampling event/media	<LOR
Comparability		
Standard operating procedures for sample collection & handling	All Samples	All Samples
Standard analytical methods used for all analyses	All Samples extracted and analysed within holding times	NATA accreditation
Consistent field conditions, sampling staff and laboratory analysis	All Samples	All samples[2]
Limits of reporting appropriate and consistent	All Samples extracted and analysed within holding times	All samples[2]
Completeness		
Sample description and COCs completed and appropriate	All Samples	All samples[2]
Appropriate documentation	All Samples	All samples[2]
Satisfactory frequency and result for QC samples		95% compliance
Data from critical samples is considered valid	-	Critical samples valid
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted Site assessment criteria	All samples	LOR<= Site assessment criteria

(1) If the RPD between duplicates is greater than the pre-determined data quality indicator, a judgment will be made as to whether the excess is critical in relation to the validation of the data set or unacceptable sampling error is occurring in the field.
(2) A qualitative assessment of compliance with standard procedures and appropriate sample collection methods will be completed during the DQI compliance assessment.

5.1.6 Optimise the Design for Obtaining Data

The purpose of this step is to identify a resource-effective field validation sampling design that generates data that are expected to satisfy the decision performance criteria, as specified in the preceding steps of the DQO process. The output of this step is the sampling design that will guide development of the field sampling and analysis plan. This step provides a general description of the activities necessary to generate and select data collection designs that satisfy decision performance criteria.

The remediation validation and subsequent laboratory analysis program as outlined in the following sections will need to be implemented during site remediation activities to demonstrate the successful completion of works in compliance with the RAP goals. The validation/characterisation sampling and analytical program for the site is outlined in **Table 5.4** below.

Table 5.4 Characterisation / Remediation and Validation Sampling Program

Item	RAP Sampling Frequency		Analytical Suite
Soil/Fill Requiring Off-site Disposal			
Soils requiring classification in accordance with EPA (2014) *Waste Guidelines*	To be sampled by JBS&G as per the sampling density for stockpiled materials in EPA (2022). Where volumes greater than 200 m^3 require assessment, a minimum of 8 samples will be collected for each distinct material type, and an additional 1 sample per 250 m^3, with statistical criteria applied (i.e. 95 % UCL)		Heavy metals TRH PAH Asbestos (presence/absence: 40 g) ASLP/TCLP heavy metals and PAHs
ACM Remedial/Removal Activities (AEC 1a, 1b, 1e and 6c, and the residential/buildings areas of 219-233 and 235-251 Aldington Road (1X))			
	Excavation Floors	Excavation Walls	
Ground surface following completion of surface picking	JBS&G is required to inspect the surface of the picked areas via walking 1 m north/south and then east/west transects and confirm the material as free of visible ACM (and aesthetic impacts).		Visual Inspection by JBS&G only
Exposed ground surface (following stockpiling, sorting and excavation of ACM impacted stockpiled material)	Visual, and 1 per 100m^2 (10 m grid) or minimum 1x sample per base	NA	Visual Inspection by JBS&G + Asbestos (NEPM protocol: 500 mL)
Hydrocarbon Impacted Fill/Soils (TP398)			
	Excavation Floors	Excavation Walls	
Base of stockpiled area following excavation, characterisation and off-site disposal.	1 sample per 25 m^2, with a minimum of 1 sample per excavation	5 m of excavation wall, with a minimum of 1 sample per wall	Heavy Metals TRH/BTEX PAH Phenols
ACM Identified within Site Structures			
	Excavation Floors	Excavation Walls	
Ground surface following removal of site structures noted to contain ACM	JBS&G is required to inspect the footprint of site structures known to contain ACM via walking 1 m north/south and then east/west transects and confirm the material as free of visible ACM (and aesthetic impacts).		Visual Inspection by JBS&G only

Footprint of all site structures for hazardous building material impacts	1 sample per 100 m^2, with a minimum of 1 sample per footprint	If excavated greater than 0.2 m bgs a sample every 5 m of excavation wall is required, with a minimum of 1 sample per wall	Visual Inspection by JBS&G + Heavy Metals TRH/BTEX PAH Asbestos (where required)
ACM Identified Below Criteria within Sub-Surface Soils			
Area in which sub-surface ACM is identified is required to be visually inspected	JBS&G is required to inspect the area in which ACM is identified to confirm no visible ACM is within surficial soils (< 0.1 m bgs). This will be undertaken via walking 1 m north/south and then east/west transects and confirm the material as free of visible ACM (and aesthetic impacts).		Visual Inspection by JBS&G only
Validation of Petroleum Infrastructure Removal (ASTs)			
	Excavation Floors	Excavation Walls	
ASTs	Visual confirmation that no staining or odours are present. If present: 1 sample per 25m^2, with a minimum of 1 sample per former AST location	If surface scrape required due to presence of staining or odours, then sampling at the following frequency: 5m of excavation wall, with a minimum of 1 sample per wall	TRH/BTEX PAH VOCs Phenols Lead ASLP heavy metals, PAH and TRH
Materials Importation			
Imported VENM	Minimum of 5 samples per source site/material type up to 10,000 m^3 then 1 sample per 1000 m^3 thereafter		TRH/BTEX PAH Heavy Metals OCP/PCBs Asbestos (NEPM protocol: 500 mL)
Quarry VENM materials (e.g. blue metal, sandstone, shale)	Confirmation that the material is quarried rock (VENM) prior to importation, and visual confirmation.		Source site inspection required
Imported ENM	As per the order/exemption		As per the order/exemption + asbestos (500 mL)
Unexpected Finds			

	Excavation Floors	Excavation Walls	
Unexpected Find	1 per 25m^2	1 per 5m lineal	As appropriate, depending on the location and characteristics of the unexpected find

The nominated sampling densities and analytical program have considered sample density guidance provided in EPA made and endorsed guidelines.

5.2 Soil Sampling Methodology

5.2.1 Validation of Emu-picked Surfaces/Soils

Upon completion of remediation activities, JBS&G undertook a validation inspection of emu-picked surfaces. A competent person inspected the picked surfaces by completing two perpendicular transects at 1 m separation, across the extent of the entire picked area.

The surface of the picked area was photographed during the inspection and records kept for inclusion in the validation report.

5.2.2 Validation of Excavation(s)

Samples were collected by an appropriately trained and experienced environmental scientist / Licensed Asbestos Assessor (LAA) using a hand trowel or from the bucket of mechanical excavation equipment, at the required densities to meet the project DQOs presented in **Section 5.1.**

Prior to collection of each sample, hand tools were thoroughly decontaminated using phosphate free detergent and distilled water as per **Section 5.2.6**.

During the collection of soil samples, features such as seepage, discolouration, staining, odours and other indicators of contamination, including the presence of ACM were noted on the field documentation.

5.2.3 Sampling for Asbestos Assessment

Bulk soil samples (minimum 10L) were collected and weighed in the field. Collected bulk sample were sieved in the field (≤7mm passing) and/or spread on contrasting plastic for inspection and separated fragments retained and weighed in the field. The asbestos concentration as ACM in soil was calculated in accordance with NEPC (2013) and WA DOH (2009[16]), as per the following equation, w/w % =

$$\frac{\text{Weight of ACM x 0.15 (assuming 15\% asbestos content}^{17}\text{) x 100}}{\text{Weight of soil (minimum 10L sample)}}$$

JBS&G note for the purposes of the outcomes of the investigation a result of 0% w/w asbestos in soil was adopted (i.e. no visible ACM) to achieve validation.

Following field quantification and a reported 0.0 % w/w achieved, a separate 500mL soil sample (sub-sample) was collected from the same location as a bulk sample, labelled and sent to the laboratory for asbestos analysis (AF/FA) according to NEPC (2013) protocol.

5.2.4 Sample Handling

Collected samples were immediately transferred to sample containers of appropriate composition (glass jars for chemical analysis, plastic bags for asbestos). Sample labels recorded: job number; sample identification number; and date of sampling.

---

16 *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia*, WA Department of Health, 2009 (WA DOH 2009).

17 Assumed asbestos content of 15% as per WA DOH (2009)

Sample containers were transferred to a chilled ice box for sample preservation (where required) prior to and during shipment to the testing laboratory. A chain-of-custody form was completed and forwarded with the samples to the testing laboratory.

5.2.5 Soil Duplicate and Triplicate Sample Preparation and QA/QC Requirements

Field duplicate and triplicate samples for the characterisation/validation assessment were obtained during sampling using the procedures outlined at a frequency outlined in **Table 5.4**. The primary sample was divided laterally into three samples with minimal disturbance to reduce the potential for loss of volatiles and placed in three clean glass jars and / or plastic bags. All jars were filled completely with no headspace to reduce the potential for loss of volatiles and separately labelled as the primary, duplicate and triplicate samples before being placed in the same chilled esky for laboratory transport.

Trip spike, storage blank and rinsate samples were collected (where required) as per **Table 5.3**.

5.2.6 Soil Sampling Equipment Decontamination

The following procedure was used to clean non-disposable equipment, including the trowel, pick, excavated bucket etc., prior to the collection of each sample:

- Scrubbing with a wire brush to remove gross contamination;
- Pressure spray with Decon 90 detergent and potable water mix;
- Pressure spray rinse with potable water; and
- Air drying.

Rinsate samples were obtained (where required i.e. during sampling for chemical constituents) during the field decontamination procedures at regular intervals during characterisation/validation sampling activities. Each rinsate sample was obtained by rinsing the trowel with laboratory grade demineralised water following the decontamination procedure. The water sample was appropriately preserved and stored with the site samples prior to transport to the laboratory for chemical analysis.

5.2.7 Laboratory Analyses

JBS&G contracted Eurofins MGT Pty Ltd as the primary laboratory for the required analyses. The secondary laboratory was Envirolab Services Pty Ltd (Envirolab). Both laboratories were NATA accredited for the required analyses. In addition, the laboratories were required to meet JBS&G's internal quality assurance/quality control (QA/QC) requirements.

5.3 Validation Criteria

The following is a discussion of validation criteria adopted during remediation works within the site, consistent with the RAP (JBS&G 2024).

5.3.1 Soils Validation Criteria and Rationale

The site is proposed to be utilised for commercial and industrial activities, as such criteria for commercial/ industrial land use scenario were adopted for site validation, specifically:

- HIL – Commercial/Industrial (HIL-D);
- HSL – Commercial/Industrial (HSL-D);
- Aesthetic considerations as per NEPC (2013);
- EIL – Commercial/Industrial setting; and
- Ecological Screening Levels (ESL) – Commercial/Industrial setting.

In addition to the above, a criterion of no visible asbestos (absence/presence) was adopted for the validation of all bonded ACM impacted fill material (to meet the objectives of the remediation, i.e. no ongoing management).

It is noted that the HSL for Benzo(a)pyrene TEQ has been adjusted to 70 mg/kg for aged soils in accordance with Risk-based management and remediation guidance for benzo(a)pyrene (CRC Care 2017[18])

5.4 Statistical Analysis of Data

Where sufficient data sets were available, statistical criteria were applied as outlined in Decision Rule 1 of **Table 5.2**, and generally as follows:

Either:

- all contaminant concentrations were less than the adopted site assessment criteria,

Or:

- The upper 95% confidence limit on the average concentration for each analyte (calculated for samples collected from consistent soil horizons, stratigraphy or material types) was below the adopted criterion;
- No single analyte concentration exceeded 250% of the adopted criterion; and
- The standard deviation of the results was less than 50% of the criterion.

In addition to the numerical criteria, the following observations will also supplement the validation process:

- Soils shall not emit recognisable odours, be discoloured because of contamination or have any significant additional aesthetic concerns with respect to future site users.

5.4.1 Off-site Disposal Criteria

Contaminated soils requiring disposal off-site were assessed in accordance with EPA (2014) *Waste Classification Guidelines Part 1: Classifying Waste* (NSW EPA 2014).

[18] *Risk-based management and remediation guidance for benzo(a)pyrene, CRC CARE Technical Report no. 39*, CRC for Contamination Assessment and Remediation of the Environment, Newcastle, Australia (CRC CARE 2017)

6. Quality Assurance / Quality Control

Detailed discussion of the QAQC assessment of the dataset is included in **Appendix D**.

The field sampling and handling procedures across the site produced QA/QC results which indicate that soil data collected is of an acceptable quality for the validation objectives.

The NATA certified laboratory reports indicate that the project laboratories were achieving levels of performance within their recommended control limits during the period when the samples from this program were analysed.

On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality upon which to draw conclusions regarding the environmental condition of the site.

©JBS&G Australia Pty Ltd

7. Summary of Remedial and Validation Works

7.1 Remedial Works

Remediation works, as outlined in **Section 4.3**, were undertaken at the site from 18 March to 10 April 2024 by Ford Civil Contractors Pty Ltd (Ford) under the supervision of JBS&G. Validation sample locations are shown on the **Figure 3** series.

A photographic log documenting the progress of the works at the site is presented in **Appendix B**.

7.2 Remediation of Bonded ACM Impacted Material

The following methodology was employed for the remediation of surficial bonded ACM impacted material:

- Each area was tyned by an excavator with a toothed bucket, ACM fragments were collected by raking, and hand picking of the spread material by Ford/Dash Group. Collected ACM fragments were disposed off-site to an appropriately licensed waste facility;
- Each area was then tyned again at a 90 degree angle to the first pass before raking and hand picking of the spread material to remove ACM a second time;
- In area 6C, concrete segments with affixed ACM, and grass stockpiled with asbestos entrained within roots were removed off-site as GSW (Special waste – Asbestos);
- In area 1X, the former TP09 was excavated to 0.5 m bgs and spread out to investigate potential for soil ACM impacts;
- Each area was validated (visually and via the sampling/screening methodology provided in **Section 5.2.3**) by JBS&G. Where ACM was visually identified, the pad was subjected to an additional rake, walk/pick by the Ford/Dash Group and re-validated by JBS&G until such time as validation was achieved; and
- Following visual validation, a representative sub-sample was collected (from a 10 L bulk sample as per **Section 5.2.3**) by JBS&G and submitted for laboratory analysis in accordance with **Table 5.4**.

A total area of approximately 7,500 m^2 was remediated and validated in areas 1A, 1B, 1E, 6C and 1X. A number of validation samples indicated the presence of friable asbestos after surface picking (UF1_01, 1E_19, 6C_07, 1X_19), these areas were remediated as described in **Section 7.3**. A single location indicated the presence of ACM (1E_20), and this area was re-picked and an additional validation sample was submitted to confirm removal of residual ACM (1E_20A).

7.3 Excavation of Friable Asbestos Hotspots

The following methodology was employed for the remediation of friable asbestos impacted material identified at the site:

- As outlined in **Section 7.2**, four friable asbestos hotspots were identified to require remediation (UF1_01, 1E_19, 6C_07, 1X_19) and were marked out by JBS&G and appropriate barricades/exclusion zones established;
- Removal/excavation of four *in-situ* friable hotspots (UF1_01, 1E_19, 6C_07, 1X_19) were advanced via a 30 tonne excavator and loaded directly to a waiting trucks for off-site disposal;
- Remedial excavations were advanced to the lateral and vertical extents presented in **Table 7.2** and shown on the **Figure 3** series;

- Following the excavation of impacted materials, the materials at the lateral and vertical extent of the resulting remedial excavations/stockpile footprint were assessed by JBS&G for indicators of contamination; and
- Once the lateral and vertical extents of the excavation were observed to be free of indicators of contamination, validation samples were collected by the JBS&G LAA for laboratory analysis in accordance **Table 5.4.**

7.4 Remediation of Unexpected Finds (UF01)

During remediation of surface asbestos impacts, it was identified that asbestos impacts within fill in the western extent of area 1B extended to a depth of approximately 0.3 m (UF01), with the approximate location of which shown on the **Figure 3** series. Photographs of the material are provided in **Appendix B.** The material was excavated and placed adjacent to Area 1B for remediation. The following methodology was employed for the assessment/remediation of impacted material associated with the unexpected find:

- The material was excavated and segregated by the remedial contractor (Ford/Dash), and spread to a depth of 0.1 m adjacent to area 1B;
- The area was tyned by an excavator with a toothed bucket, ACM fragments were collected by raking and hand picking of the spread material by Ford/Dash Group and collected ACM fragments were disposed off-site to an appropriately licensed waste facility;
- The area was then tyned again at a 90 degree angle to the first pass before raking and hand picking of the spread material to remove ACM a second time;
- The area was validated (visually and via the sampling/screening methodology provided in **Section 5.2.3**) by JBS&G.
- Following visual validation, a representative sub-sample was collected (from a 10 L bulk sample as per **Section 5.2.3**) by JBS&G and submitted for laboratory analysis in accordance with **Table 5.4.**
- Subsequently, the material was identified to have failed validation (UF1_01) due to detection of friable asbestos, and was excavated and disposed off-site as specified in **Section 7.10**;

7.5 Remediation of Unexpected Finds (UF02)

As part of remediation works in Area 1A, an asbestos pipe was identified near the surface as shown on the **Figure 3** series.

The following methodology was employed for the assessment/remediation of impacted material associated with the unexpected find:

- The pipe was exposed by the excavator to determine the total length, which was identified to be approximately 24 m;
- The pipe was removed and placed directly into a truck for disposal off-site as asbestos waste, a small breakage was noted in the central section of the pipe. However, generally the pipe was not damaged during removal;
- The excavation was inspected by JBS&G to ensure all asbestos material had been successfully removed; and
- JBS&G collected 11 samples to validate the removal of the asbestos pipe, including a base sample and 10 wall samples, in accordance with the RAP (2024). Samples submitted for asbestos laboratory analysis (**Table A, Appendix A**) did not identify the presence of asbestos, as either ACM or friable asbestos (AF/FA).

7.6 Remediation of Hydrocarbon Impacts (TP398)

As part of remediation works in Area 6C, hydrocarbon impacted soils were removed at TP398 as shown on the **Figure 3** series.

The following methodology was employed for the remediation of impacted material associated with the hydrocarbon impacts:

- The 30 T excavator advanced the excavation to 0.3 m bgs, into natural clay materials, and excavated a 10 x 10 m area around the TP398 location;
- The excavation was inspected by JBS&G for odours, or staining associated with hydrocarbon impacts; and
- JBS&G collected 8 samples to validate the removal of the hydrocarbon impacted material, including two base samples and 6 wall samples, in accordance with the RAP (2024).

7.7 Site Inspection of Former Structures and ASTs

In accordance with the RAP, areas of former asbestos containing structures were inspected for surface asbestos impacts (Area 1C and Area 1D). Site observations included walking the former footprints in 1m transects, with no surficial asbestos was identified. It was noted that structures containing asbestos were still present in Areas 1A and 1X, which will require an asbestos clearance following demolition.

Former AST's were also inspected as part of the remediation works. Minor staining on the concrete slabs were observed where AST's had been present within Lot 27 DP 255560. It was observed that concrete slabs were in good condition, with no sign of cracking or joining within the staining. Therefore, the former AST's were not considered unlikely to have caused a contamination issue, as surfaces were sealed and in good condition.

7.8 Validation Sampling

All laboratory reports and chain of custody documentation for validation and characterisation sampling are provided in **Appendix C**.

Summary analytical results tables for validation and characterisation of soils are provided in **Table A.**

The lateral extents of all remedial areas and associated validation samples are shown on the **Figure 3** series. Samples were collected at the frequencies nominated in the RAP (JBS&G 2024) as presented in **Table 5.4**. Sample locations were recorded using a hand-held GPS with sub-metre accuracy. Samples were collected via the methodology outlined in **Section 5.2** and asbestos quantification (minimum 10 L sample) was conducted at each location. During the collection of samples, features such as ACM (absence/presence), staining and odours were recorded. It should be noted that no odours or staining or ACM were detected during the collection of final validation samples.

7.8.1 Bonded Asbestos Validation Sampling

The materials treated on-site by Ford were validated in accordance with JBS&G (2024). Upon completion of the remediation of bonded ACM impacted fill material, and surface impacts, no ACM material was observed, and final validation samples were free of ACM and AF/FA impacts. Details of validation sampling is presented in **Table 7.1** below.

Table 7.1 Bonded Asbestos Validation

Sample Type	RAP Sampling Frequency	Approximate Area (m^2)/Volume (m^3)	Sampled Frequency	Primary Sample ID	Analytical Suite
Surface Validation (treated material)					
Area 1A					
Bulk	1/100 m^2	1,400 m^3	16 samples	1A_01-1A_16	Asbestos (NEPM: 500 mL)
Area 1B (Including UF1)					
Bulk	1/100 m^2	900 m^3	17 samples	1B_01-1B_10, 1B2_01-1B2_03, UF1_01, UF1_02, UF1_01A and UF1_02A	Asbestos (NEPM: 500 mL)
Area 1E					
Bulk	1/100 m^2	2200 m^3	23 pad samples	1E_01-1E_21, 1E_19A and 1E_20A	Asbestos (NEPM: 500 mL)
Area 6C					
Bulk	1/100 m^2	1150 m^3	17 pad samples	6C_01-6C_16, 6C_07A	Asbestos (NEPM: 500 mL)
Area 1X					
Bulk	1/100 m^2	2100 m^3	22 pad samples	1X_01-1X_21, 1X_19A	Asbestos (NEPM: 500 mL)
***In-Situ* Excavation Validation**					
TP460 (excavation extent)					
Base of Excavation	1/100 m^2	25 m^2	2 base samples	463_08 to 463_09	Asbestos (NEPM: 500 mL)
Excavation Walls	1 sample per 10 m 1 sample per 1 m depth	5 x 5 m^2	7 wall samples	463_01 to 463_08	Asbestos (NEPM: 500 mL)
TP460 (excavation extent)					
Base of Excavation	1/100 m^2	25 m^2	2 base samples	460_13 to 460_14	Asbestos (NEPM: 500 mL)
Excavation Walls	1 sample per 10 m 1 sample per 1 m depth	5 x 5 m^2	12 wall samples	460_01 to 460_12	Asbestos (NEPM: 500 mL)
UF2 – Asbestos Pipe					
Base of Excavation	1/100 m^2	25 m^2	1 base sample	UF2_B01	Asbestos (NEPM: 500 mL)
Excavation Walls	1 sample per 10 m	24 x 1 m^2	10 wall samples	UF2_EW1-UF2_EW5 and	Asbestos (NEPM: 500 mL)

Sample Type	RAP Sampling Frequency	Approximate Area (m^2)/Volume (m^3)	Sampled Frequency	Primary Sample ID	Analytical Suite
	1 sample per 1 m depth			UF2_WW1-UF2_WW5	

7.8.2 Friable Asbestos Hotspot Validation

Excavations formed by the removal of material identified to contain AF/FA were validated in accordance with JBS&G (2024) and as presented in **Table 7.2** below.

Table 7.2 Friable Asbestos Hotspot Validation

Sample Type	RAP Sampling Frequency	Sampled Frequency	Sample ID	Analytical Suite
1E_19 – Dimensions approximately 10 m x 10 m x 0.1 m				
Base of Excavation	1/100 m^2	1 base sample	1E_19A	Asbestos (NEPM: 500 mL)
Walls of Excavation	NA: walls not evident, or less than 0.2 m in height			
1X_19 – Dimensions approximately 10 m x 10 m x 0.1 m				
Base of Excavation	1/100 m^2	1 base sample	1X_19A	Asbestos (NEPM: 500 mL)
Walls of Excavation	NA: walls not evident, or less than 0.2 m in height			
6C_07 – Dimensions approximately 10 m x 10 m x 0.1 m				
Base of Excavation	1/100 m^2	1 base sample	6C_07A	Asbestos (NEPM: 500 mL)
Walls of Excavation	NA: walls not evident, or less than 0.2 m in height			
UF1_01 – Dimensions approximately 10 m x 10 m x 0.1 m				
Base of Excavation	1/100 m^2	1 base sample	UF1_01A, UF1_02A	Asbestos (NEPM: 500 mL)
Walls of Excavation	NA: walls not evident, or less than 0.2 m in height			

During remedial activities anthropogenic materials were noted within the soil located in the remedial zones (1E, 1B and 1X). The anthropogenic material was noted to be minor in nature and consist of brick, plastic, and tile. It is noted that some general rubbish material was located on the site, particularly around undemolished structures. This is expected to be removed with final demolition of structures. Inclusions in soil were not noted to be significant, and based on the proposed land use of commercial/industrial, are not expected to be an unacceptable aesthetic concern.

7.9 Off-Site Disposal

Waste Classification documentation is provided in **Appendix E.** Off-site disposal dockets and material tracking records are provided in **Appendix F.**

Materials assessed to be unsuitable for the proposed land use were excavated and disposed off-site to facilities licensed to accept such wastes. During remedial activities at the site, contaminated excavated and stockpiled material were disposed off-site by Ford/Dash according to waste classification documentation as outline in **Table 7.3** below. Pre-classified wastes were disposed of in accordance with relevant EPA orders/exemptions and/or as defined in EPA (2014).

Table 7.3 Off-site Disposal Material Tracking

Material ID	Source Location	Approx. Volume (m^3)	Receiving Waste Facility	Date of Disposal	Tonnes (t)	Waste Classification
Friable (AF/FA) Excavations						
UF1_01	Friable asbestos hotspot within surface clearance 1E	20	Brandown Waste and Recycling Landfill, 90 Range Road, Cecil Park, NSW 2178	09.04.2020	74.82 t	General Solid Waste (GSW) / Special Waste (asbestos) non-putrescible (JBS&G 2024b[19])
6C_07	Friable asbestos hotspot within surface clearance 6C	10				
1X_19	Friable asbestos hotspot within surface clearance 1X	10				General Solid Waste (GSW) / Special Waste (asbestos) non-putrescible (JBS&G 2024c[20])
1E_19	Friable asbestos hotspot within surface clearance of UF1	10	Bingo Recycling, Honeycomb Drive, Eastern Creek, NSW 2766	28.03.2024	14.22 t	GSW / Special Waste (asbestos) non-putrescible (JBS&G 2024d[21])
TP398 – Hydrocarbon Impacted Hotspot						
TP398	Hydrocarbon impacted material at DSI Test Pit 398	30	Sydney Recycling Park, 16-23 Clifton Road, Kemps Creek, NSW 2178	22.03.2024	26.94 t	GSW non-putrescible (JBS&G 2024e[22])
TP460 and TP463 - Asbestos Impacted Fill

Note, a register of waste disposal at the site is provided in **Appendix F**.

7.10 Air Monitoring

All air monitoring was completed during remedial works as per the requirements of JBS&G (2024) in accordance with the *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres* [NOHSC: 3003(2005)], with NATA certification applying to all sample collection, handling and analytical procedures.

All reported results were satisfactory and below the minimum action levels for control monitoring as outlined in:

- Work, Health and Safety (2017) Regulation; and
- SafeWork NSW (2019) *How to Safely Remove Asbestos: Code of Practice* (SWNSW 2019[24]).

[24] *How to safely remove Asbestos – Code of Practice, SafeWork NSW 2019* (SWNSW 2019)

8. Analytical Results

8.1 Remediation and Validation Results

Field Observations – Remedial Areas

Remedial activities at the site were undertaken between the 18 March and 10 April 2024. The remedial extents and key site features are shown on the **Figure 3** series, a photographic log depicting the works conducted at the site is presented in **Appendix B.**

Remediated surface materials were identified assesses during remediation, and described as follows:

- 1A – Black/brown/grey gravelly clay, trace tile and timber;
- 1B – Black/brown gravelly clay with minor inclusions of shale, brick, tile, terracotta, and steel;
- 1E – Brown/black/orange gravelly clay, inclusions of sand, roots and organics, trace concrete, tile, brick, timber/particle board and shale;
- 1X – Black/brown/grey gravelly clay with some vegetation and minor timber, plastic; and
- 6C – black/brown/grey gravelly clay with vegetation and minor shale gravels, tile/terracotta, brick, concrete and organics.

It was noted that some household waste including metal, timber and plastic was associated with the structures present around area 1X. These materials were not within the site surface soils. TP09 was excavated to 0.5 m to investigate the potential for ACM impacts below the surface, no ACM was identified within the spread soils.

Area 1C and Area 1D were investigated for surface ACM impacts, with no ACM identified in these areas after walking 1 m transects. The former ASTs previously identified south of Area 1B were investigated, with minor staining observed on the concrete slabs remaining underneath the AST locations. However, the surface was in good condition with no cracks or joins evident. Therefore, it is considered unlikely that a pathway to site soils exists.

Soil Analytical Results – Remediation

All soil results of validation locations are summarised in **Table A** and laboratory reports and chain of custody documentation are included in **Appendix C**.

The characterisation areas and validation sampling locations are shown on the **Figure 3** series**.**

8.1.1.1 Asbestos

During inspection and validation of treated bonded ACM impacted material, final validation samples (10L asbestos quantification) did not report the presence of visible ACM (0% w/w) as per the criteria outlined in **Section 5.3.1**.

A total of 129 primary samples were submitted for asbestos analysis as part of remedial works. Asbestos was reported below the LOR and validation criteria in all samples submitted for analysis, except for (subsequently removed during remediation):

- 1E_19 – AF/FA of 0.0007 %w/w, which is below the adopted site criteria, but above the limit of reporting;
- 6C_07 – AF/FA of 0.13 %w/w, above the adopted health screening criteria;
- 1X_19 – AF/FA of 0.0099 %w/w, which is below the adopted site criteria, but above the limit of reporting;
- UF1_01 – AF/FA of 0.00007 %w/w, which is below the adopted site criteria, but above the limit of reporting;

- 1E_20 – ACM of 0.22 %w/w, above the adopted health screening criteria.

Following further excavation and removal of AF/FA impacted material from these areas, and re-picking of area 1E_20 (**Figure 3** series), all subsequent validation samples (1E_19A, 1E_20A, 6C_07A, 1X_19A, UF1_01A, UF1_02A) reported AF/FA and ACM below the limit of reporting, except:

8.1.1.2 Heavy Metals

A total of 8 primary samples were submitted for heavy metal analysis as part of remedial works to validate the remediation of TP398. Heavy metals were reported below the validation criteria in all samples submitted for analysis, except for:

- 398_06 – Zinc with a concentration of 190 mg/kg above the ecological criteria of 110 mg/kg.

8.1.1.3 TRH/BTEX

A total of 8 primary samples were submitted for TRH/BTEX analysis as part of remedial works to validate the remediation of TP398. All samples were reported below the validation criteria in samples submitted for analysis.

8.1.1.4 PAH

A total of 8 primary samples were submitted for PAH analysis as part of remedial works to validate the remediation of TP398. All samples were reported below the validation criteria in all samples submitted for analysis, with the exception of:

Benzo(a)pyrene was reported above the site ecological screening level of 1.4 mg/kg at the following locations:

- 398_01 – with a concentration of 15 mg/kg;
- 398_02 – with a concentration of 63 mg/kg;
- 398_03 – with a concentration of 13 mg/kg;
- 398_05 – with a concentration of 5.1 mg/kg; and
- 398_06 – with a concentration of 3.2 mg/kg.

It is noted that the elevated concentrations of benzo(a)pyrene are likely sourced from isolated asphaltic inclusions and therefore bound within a matrix. Furthermore, NEPM Schedule B7 (Appendix A2 the derivation of PAHs and Phenols) guidance provides that plants grown on PAH contaminated soil have only limited ability to take in and incorporate anthropogenic PAHs through their roots and into their biomass. With consideration to the proposed end use of the site, JBS&G do not consider the elevated concentration of benzo(a)pyrene within TP398 excavation to represent an unacceptable risk requiring remediation or management.

Benzo(a)pyrene TEQ was reported above the site specific health investigation level of 70 mg/kg at the following locations:

- 398_02 – with a concentration of 100 mg/kg.

8.1.1.5 Phenols

A total of 8 primary samples were submitted for Phenols analysis as part of remedial works to validate the remediation of TP398. All samples were reported below the validation criteria and LOR in all samples submitted for analysis.

8.1.1.6 Herbicides and Fungicides

A total of 8 primary samples were submitted for Dinoseb analysis as part of remedial works to validate the remediation of TP398. All samples were reported below the validation criteria and LOR in all samples submitted for analysis.

9. Assessment of Decision Rules

As discussed in **Section 8**, the data set for the site is considered suitable to make conclusions on the suitability of the site for its proposed use. Based on the decisions to determine suitability of the site for proposed use are discussed below.

9.1 Are contaminant concentrations in remedial excavations above the adopted site criteria?

No contaminant concentrations in final validation samples were above the adopted site criteria for asbestos.

A number of samples exceeded the ecological screening level for benzo(a)pyrene, however it is noted that the elevated concentrations of benzo(a)pyrene are likely sourced from isolated asphaltic inclusions and therefore bound within a matrix. Waste classification sampling (JBS&G 2024e) included TCLP leachate analysis, which indicated all samples were below the LOR for b(a)p in leachate. Furthermore, NEPM Schedule B7 (Appendix A2 the derivation of PAHs and Phenols) guidance provides that plants grown on PAH contaminated soil have only limited ability to take in and incorporate anthropogenic PAHs through their roots and into their biomass. With consideration to the proposed end use of the site, JBS&G do not consider the elevated concentration of benzo(a)pyrene within TP398 excavation to represent an unacceptable risk requiring remediation or management.

A single exceedance of benzo(a)pyrene TEQ above the adopted site criteria (70 mg/kg) was reported at 398_02 (100 mg/kg). Statistical analysis was undertaken on all of the samples taken from the excavation. The results are attached as **Appendix H**, with the results indicating that the Standard Deviation (33.47 mg/kg) is less than 50% of the criteria, and the 95% UCL of 91.82 mg/kg is below the site criteria.

The answer to the decision is no.

9.2 Are there any aesthetic issues remaining following remediation works?

Based on the absence of identifiable odours or staining, lack of significant deleterious soil inclusions noted in the remedial areas, JBS&G does not consider there are aesthetic issues at the site likely to preclude a commercial/industrial land use scenario.

The answer to the decision is no.

9.3 Are there any regulatory compliance issues associated with site remediation activities?

A qualitative review of relevant approvals, materials importation and disposal has been completed in preparation of this validation assessment. A brief discussion is presented below.

Environment Planning and Assessment Act 1979/SEPP (R&H) (2021)

The remediation works within a portion of the site zoned 'Western Sydney Employment Area 2009' were classified as Category 2 Remediation Works as per the meaning provided in SEPP (Resilience and Hazards) (2021).

Prior to works, notification of remediation was provided to Penrith Council on 5 February 2024, satisfying the minimum 30-day notification requirement.

Environment Planning and Assessment Regulation 2000 – Schedule 3 Designated Development

Remediation works did not trigger application of the regulation.

Protection of the Environment Operations Act 1997

The remediation/validation activities were not required to be licensed under the POEO Act. No individual work stages was found to be greater than 3 ha in area or triggered application of the *Act*, and hence do not trigger licensing requirements.

Protection of the Environment Operations (Waste) Regulation 2014

Waste was stored whilst on site in an environmentally safe manner as per the Principal Contractor's management plans and the RAP (JBS&G 2024).

Waste Classification Guidelines (EPA 2014)

All material was classified in accordance with EPA (2014) and disposed to facilities lawfully able to accept it.

WorkSafe/WorkCover

Prior to works, consent was issued by Worksafe/WorkCover to undertake asbestos removal works.

All air monitoring was completed in accordance with the *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres* [NOHSC: 3003(2005)], with NATA certification applying to all sample collection, handling and analytical procedures.

All reported results were satisfactory and below the minimum action levels for control monitoring as outlined in:

- Work, Health and Safety (2011) Regulation; and
- WorkCover Authority of NSW (2011) *Code of Practice – How to Safely Remove Asbestos*.

Overall Regulatory Compliance

Regulatory requirements associated with the remediation works have been met during this project and as such, it is considered activities have been compliant.

The answer to the decision is **no**.

9.4 Is the site considered suitable for the proposed use without the requirement for ongoing management?

Based on the successful validation of the site in accordance with NEPC (2013), JBS&G considers that the site is suitable for the proposed commercial/ industrial land use (NEPC 2013) without the requirement for ongoing management (i.e. environmental management plan (EMP) or similar instrument) to address identified contamination.

The answer to the decision is **yes**.

10. Conclusions

Based on the results of the remediation and validation of the site described herein, and subject to the limitation described in **Section 11**, JBS&G considers that the site has been remediated and is suitable for the proposed commercial/industrial land use, without the requirement for ongoing management.

It is recommended that the unexpected finds protocol presented in the RAP (2024) is utilised throughout earthworks.

11. Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties. The report has been prepared specifically for the client for the purposes of the commission, and no warranties, express or implied, are offered to any third parties and no liability will be accepted for use or interpretation of this report by any third party.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose. This report should not be amended in any way without prior approval by JBS&G, or reproduced other than in full including all attachments as originally provided to the client by JBS&G.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements or agreed scope of work.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Env Stds Comments
#21:Commercial/industrial D includes premises such as shops, offices, factories and industrial sites.
#22:Only applies where the FA and AF are able to be quantified by gravimetric procedures (refer Section 4.10). This screening level is not applicable to free fibres.

Data Comments
#1 AF:Chrysotile asbestos detected in compressed fibre cement material.Approximate raw weight of AF = 0.045g*Estimated asbestos content in AF = 0.0045g*Total estimated asbestos concentration in AF = 0.00070% w/w*No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.No trace asbestos detected.
#2 FA:Chrysotile asbestos detected in weathered fibre cement material.Approximate raw weight of FA = 0.019gEstimated asbestos content in FA = 0.0056g*Total estimated asbestos concentration in FA = 0.00099% w/w*No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.No trace asbestos detected.
#3 AF:Chrysotile asbestos detected in fibre cement fragments.Approximate raw weight of AF = 0.0048g*Estimated asbestos content in AF = 0.00048g*Total estimated asbestos concentration in AF = 0.000066% w/w*No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.
#4 ACM:Chrysotile and amosite asbestos detected in compressed fibre cement material.Approximate raw weight of ACM = 4.3gTotal estimated asbestos content in ACM = 0.86g*Total estimated asbestos concentration in ACM = 0.22% w/w*Organic fibre detected.No trace asbestos detected.
#5 AF:Chrysotile asbestos detected in the form of loose fibre bundles.Approximate raw weight of AF = 0.94g*Estimated asbestos content in AF = 0.90g*Total estimated asbestos concentration in AF = 0.13% w/w*Organic fibre detected.No trace asbestos detected.
#6 No asbestos detected at the reporting limit of 0.001% w/w.*Synthetic mineral fibre detected.Organic fibre detected.No trace asbestos detected.
#7 AF:Chrysotile asbestos detected in compressed fibre cement material.No asbestos detected at the reporting limit of 0.001% w/w.*
#8 FA:Chrysotile asbestos detected in weathered fibre cement material.No asbestos detected at the reporting limit of 0.001% w/w.*

Env Stds Comments

#1:Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#2:Trigger Value adopted from Chromium (VI)
#3:Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered where appropriate.
#4:Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#5:Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A(1)) & summing
#6:Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (should meet relevant HSL)
#7:Derived soil HSL exceeds soil saturation concentraiton. To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#8:Derived soil HSL exceeds soil saturation concentraiton. To obtain F2 subtract naphthalene from the >C10-C16 fraction
#9:Derived soil HSL exceeds soil saturation concentraiton
#10:Aged values apply to arsenic contamination present in soil > 2 years. Refer Schedule B5c for < 2 years.
#11:Trigger Value taken for Chromium (III), Clay Content of 1%
#12:Trigger Value taken for pH 4.5
#13:Aged values apply to lead contamination present in soil > 2 years. Refer Schedule B5c for < 2 years.
#14:Trigger Value taken for CEC 5
#15:Trigger Value taken for pH 4 and CEC 5
#16:ESLs are of low reliability.
#17:Moderate reliability. To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#18:Moderate reliability. To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#19:ESLs are of low reliability. Revised as per NEPC errata 6 Feb 2014
#20:Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2
#21:Commercial/industrial D includes premises such as shops, offices, factories and industrial sites.
#22:Only applies where the FA and AF are able to be quantified by gravimetric procedures (refer Section 4.10). This screening level is not applicable to free fibres.

Env Stds Comments
#1:Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#2:Trigger Value adopted from Chromium (VI)
#3:Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered where appropriate.
#4:Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#5:Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A(1)) & summing
#6:Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (should meet relevant HSL) #7:Derived soil HSL exceeds soil saturation concentraiton. To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#8:Derived soil HSL exceeds soil saturation concentraiton. To obtain F2 subtract naphthalene from the >C10-C16 fraction
#9:Derived soil HSL exceeds soil saturation concentraiton
#10:Aged values apply to arsenic contamination present in soil > 2 years. Refer Schedule B5c for < 2 years.
#11:Trigger Value taken for Chromium (III), Clay Content of 1%
#12:Trigger Value taken for pH 4.5
#13:Aged values apply to lead contamination present in soil > 2 years. Refer Schedule B5c for < 2 years.
#14:Trigger Value taken for CEC 5
#15:Trigger Value taken for pH 4 and CEC 5
#16:ESLs are of low reliability.
#17:Moderate reliability. To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#18:Moderate reliability. To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#19:ESLs are of low reliability. Revised as per NEPC errata 6 Feb 2014
#20:Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2
#21:Commercial/industrial D includes premises such as shops, offices, factories and industrial sites.
#22:Only applies where the FA and AF are able to be quantified by gravimetric procedures (refer Section 4.10). This screening level is not applicable to free fibres.

CERTIFICATE OF ANALYSIS 347244

Client Details

Client	JBS & G (NSW & WA) Pty Ltd
Attention	M Chapman, S Knott
Address	Level 1, 50 Margaret St, Sydney, NSW, 2000

Sample Details

Your Reference	**66105 - Aldington_03**
Number of Samples	2 Soil
Date samples received	22/03/2024
Date completed instructions received	22/03/2024

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details

Date results requested by	26/03/2024
Date of Issue	25/03/2024

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Asbestos ID - soils NEPM - ASB-001			
Our Reference		347244-1	347244-2
Your Reference	UNITS	QA01	QA02
Date Sampled		21/03/2024	21/03/2024
Type of sample		Soil	Soil
Date analysed	-	25/03/2024	25/03/2024
Sample mass tested	g	810.19	919.83
Sample Description	-	Brown coarse-grained soil & rocks	Brown coarse-grained soil & rocks
Asbestos ID in soil (AS4964) >0.1g/kg	-	No asbestos detected at reporting limit of 0.1g/kg Organic fibres detected	No asbestos detected at reporting limit of 0.1g/kg Organic fibres detected
Trace Analysis	-	No asbestos detected	No asbestos detected
Total Asbestos[#1]	g/kg	<0.1	<0.1
Asbestos ID in soil <0.1g/kg*	-	No visible asbestos detected	No visible asbestos detected
ACM >7mm Estimation*	g	–	–
FA and AF Estimation*	g	–	–
ACM >7mm Estimation*	%(w/w)	<0.01	<0.01
FA and AF Estimation*#2	%(w/w)	<0.001	<0.001

Method ID	Methodology Summary
ASB-001	Asbestos ID - Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.
ASB-001	Asbestos ID - Identification of asbestos in soil samples using Polarised Light Microscopy and Dispersion Staining Techniques. Minimum 500mL soil sample was analysed as recommended by "National Environment Protection (Assessment of site contamination) Measure, Schedule B1 and "The Guidelines from the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia - May 2009" with a reporting limit of 0.1g/kg (0.01% w/w) as per Australian Standard AS4964-2004. Results reported denoted with * are outside our scope of NATA accreditation. NOTE#1 Total Asbestos g/kg was analysed and reported as per Australian Standard AS4964 (This is the sum of ACM >7mm, <7mm and FA/AF relative to the sample mass tested) NOTE#2 The screening level of 0.001% w/w asbestos in soil for FA and AF only applies where the FA and AF are able to be quantified by gravimetric procedures. This screening level is not applicable to free fibres. Estimation = Estimated asbestos weight Results reported with "--" is equivalent to no visible asbestos identified using Polarised Light microscopy and Dispersion Staining Techniques.

CERTIFICATE OF ANALYSIS 348513

Client Details

Client	JBS & G (NSW & WA) Pty Ltd
Attention	C Kauffman
Address	Level 1, 50 Margaret St, Sydney, NSW, 2000

Sample Details

Your Reference	**66105 Aldington-94**
Number of Samples	1 Soil
Date samples received	10/04/2024
Date completed instructions received	10/04/2024

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details

Date results requested by	11/04/2024
Date of Issue	11/04/2024

NATA Accreditation Number 2901. This document shall not be reproduced except in full.

Accredited for compliance with ISO/IEC 17025 - Testing. **Tests not covered by NATA are denoted with ***

Asbestos Approved By
Analysed by Asbestos Approved Analyst: Nyovan Moonean
Authorised by Asbestos Approved Signatory: Nyovan Moonean

Results Approved By
Nyovan Moonean, Asbestos Approved Identifier/Counter

Authorised By
Nancy Zhang, Laboratory Manager

Asbestos ID - soils NEPM - ASB-001		
Our Reference		348513-1
Your Reference	UNITS	QA240409
Date Sampled		09/04/2024
Type of sample		Soil
Date analysed	-	11/04/2024
Sample mass tested	g	262.21
Sample Description	-	Brown coarse-grained soil,rocks & debris
Asbestos ID in soil (AS4964) >0.1g/kg	-	No asbestos detected at reporting limit of 0.1g/kg Organic fibres detected
Trace Analysis	-	No asbestos detected
Total Asbestos[#1]	g/kg	<0.1
Asbestos ID in soil <0.1g/kg*	-	No visible asbestos detected
ACM >7mm Estimation*	g	–
FA and AF Estimation*	g	–
ACM >7mm Estimation*	%(w/w)	<0.01
FA and AF Estimation*#2	%(w/w)	<0.001

Method ID	Methodology Summary
ASB-001	Asbestos ID - Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.
ASB-001	Asbestos ID - Identification of asbestos in soil samples using Polarised Light Microscopy and Dispersion Staining Techniques. Minimum 500mL soil sample was analysed as recommended by "National Environment Protection (Assessment of site contamination) Measure, Schedule B1 and "The Guidelines from the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia - May 2009" with a reporting limit of 0.1g/kg (0.01% w/w) as per Australian Standard AS4964-2004. Results reported denoted with * are outside our scope of NATA accreditation. NOTE#1 Total Asbestos g/kg was analysed and reported as per Australian Standard AS4964 (This is the sum of ACM >7mm, <7mm and FA/AF relative to the sample mass tested) NOTE#2 The screening level of 0.001% w/w asbestos in soil for FA and AF only applies where the FA and AF are able to be quantified by gravimetric procedures. This screening level is not applicable to free fibres. Estimation = Estimated asbestos weight Results reported with "--" is equivalent to no visible asbestos identified using Polarised Light microscopy and Dispersion Staining Techniques.

Result Definitions

NT	Not tested
NA	Test not required
INS	Insufficient sample for this test
PQL	Practical Quantitation Limit
<	Less than
>	Greater than
RPD	Relative Percent Difference
LCS	Laboratory Control Sample
NS	Not specified
NEPM	National Environmental Protection Measure
NR	Not Reported

Report Comments

Asbestos-ID in soil: NEPM
This report is consistent with the reporting recommendations in the National Environment Protection (Assessment of Site Contamination) Measure, Schedule B1, May 2013. This is reported outside our scope of NATA accreditation.

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Massimo Chapman
Project name:	ALDINGTON_01
Project ID:	66105
Turnaround time:	5 Day
Date/Time received	Mar 19, 2024 4:40 PM
Eurofins reference	1079912

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 8.3 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Please confirm TAT. Asbestos bag for sample "463A_03" was mislabeled as "468A_03", logged as per coc.

Attention:	Massimo Chapman
Report	1079912-AID
Project Name	ALDINGTON_01
Project ID	66105
Received Date	Mar 19, 2024
Date Reported	Mar 26, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ma0047785, 24-Ma0047786, 24-Ma0047789, 24-Ma0047793: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Mar 23, 2024	14 Days

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Samuel Knott
Project name:	ALDINGTON-02
Project ID:	66105
Turnaround time:	3 Day
Date/Time received	Mar 20, 2024 6:38 PM
Eurofins reference	1080081

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Samuel Knott
Report	1080081-AID
Project Name	ALDINGTON-02
Project ID	66105
Received Date	Mar 20, 2024
Date Reported	Mar 25, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Test Counts						21

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ma0049140, 24-Ma0049143, 24-Ma0049148, 24-Ma0049152: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 23.3 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✗	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Attention:	Samuel Knott
Report	1080742-AID
Project Name	ALDINGTON-03
Project ID	66105
Received Date	Mar 22, 2024
Date Reported	Mar 26, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON-03
Project ID 66105
Date Sampled Mar 21, 2024
Report 1080742-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1A-01	24-Ma0054727	Mar 21, 2024	Approximate Sample 701g Sample consisted of: Brown coarse-grained soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-02	24-Ma0054728	Mar 21, 2024	Approximate Sample 667g Sample consisted of: Brown fine-grained clayey soil, cement, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-03	24-Ma0054729	Mar 21, 2024	Approximate Sample 540g Sample consisted of: Brown fine-grained clayey soil, cement, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-04	24-Ma0054730	Mar 21, 2024	Approximate Sample 566g Sample consisted of: Brown coarse-grained soil, organic debris, cement, brick and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-05	24-Ma0054731	Mar 21, 2024	Approximate Sample 900g Sample consisted of: Brown coarse grained sandy clayey soil, bitumen and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-06	24-Ma0054732	Mar 21, 2024	Approximate Sample 550g Sample consisted of: Brown fine-grained clayey soil, cement, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-07	24-Ma0054733	Mar 21, 2024	Approximate Sample 720g Sample consisted of: Brown fine-grained clayey soil, cement, brick, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-08	24-Ma0054734	Mar 21, 2024	Approximate Sample 620g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1A-09	24-Ma0054735	Mar 21, 2024	Approximate Sample 500g Sample consisted of: Brown fine-grained clayey soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-10	24-Ma0054736	Mar 21, 2024	Approximate Sample 731g Sample consisted of: Brown coarse grained sandy clayey soil, bitumen and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-11	24-Ma0054737	Mar 21, 2024	Approximate Sample 500g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-12	24-Ma0054738	Mar 21, 2024	Approximate Sample 622g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-13	24-Ma0054739	Mar 21, 2024	Approximate Sample 726g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-14	24-Ma0054740	Mar 21, 2024	Approximate Sample 706g Sample consisted of: Brown fine-grained clayey soil, bitumen, cement and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-15	24-Ma0054741	Mar 21, 2024	Approximate Sample 725g Sample consisted of: Brown coarse-grained sandy soil, cement and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1A-16	24-Ma0054742	Mar 21, 2024	Approximate Sample 501g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-01	24-Ma0054743	Mar 21, 2024	Approximate Sample 520g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-02	24-Ma0054744	Mar 21, 2024	Approximate Sample 500g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-03	24-Ma0054745	Mar 21, 2024	Approximate Sample 501g Sample consisted of: Brown fine-grained clayey soil, plant residue, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-04	24-Ma0054746	Mar 21, 2024	Approximate Sample 520g Sample consisted of: Brown coarse grained sandy clayey soil, plaster and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-05	24-Ma0054747	Mar 21, 2024	Approximate Sample 722g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1B-06	24-Ma0054748	Mar 21, 2024	Approximate Sample 610g Sample consisted of: Brown fine-grained clayey soil, cement and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-07	24-Ma0054749	Mar 21, 2024	Approximate Sample 700g Sample consisted of: Brown coarse-grained soil, coal, debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-08	24-Ma0054750	Mar 21, 2024	Approximate Sample 780g Sample consisted of: Brown coarse-grained soil, plaster, coal, corroded metal and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-09	24-Ma0054751	Mar 21, 2024	Approximate Sample 821g Sample consisted of: Brown coarse-grained soil, coal, plaster, brick, cement and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B-10	24-Ma0054752	Mar 21, 2024	Approximate Sample 786g Sample consisted of: Brown coarse-grained soil, plaster, bitumen, coal and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
QC01	24-Ma0054753	Mar 21, 2024	Approximate Sample 752g Sample consisted of: Brown coarse-grained soil, glass, cement and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
QC02	24-Ma0054754	Mar 21, 2024	Approximate Sample 987g Sample consisted of: Brown coarse-grained soil, coal, cement, brick and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	No
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Asbestos Counter/Identifier:

Laxman Dias	Senior Analyst-Asbestos

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
N/A	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Massimo Chapman - mchapman@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Massimo Chapman
Report	1081006-AID
Project Name	ALDINGTON_04
Project ID	66105
Received Date	Mar 22, 2024
Date Reported	Mar 27, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON_04
Project ID 66105
Date Sampled Mar 22, 2024
Report 1081006-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
IX_01	24-Ma0056361	Mar 22, 2024	Approximate Sample 617g Sample consisted of: Brown fine-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_02	24-Ma0056362	Mar 22, 2024	Approximate Sample 402g / >500ml Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_03	24-Ma0056363	Mar 22, 2024	Approximate Sample 756g Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Synthetic mineral fibre detected. Organic fibre detected. No trace asbestos detected.
IX_04	24-Ma0056364	Mar 22, 2024	Approximate Sample 652g Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_05	24-Ma0056365	Mar 22, 2024	Approximate Sample 732g Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_06	24-Ma0056366	Mar 22, 2024	Approximate Sample 700g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_07	24-Ma0056367	Mar 22, 2024	Approximate Sample 522g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_08	24-Ma0056368	Mar 22, 2024	Approximate Sample 494g / >500ml Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
IX_09	24-Ma0056369	Mar 22, 2024	Approximate Sample 570g Sample consisted of: Brown fine-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_10	24-Ma0056370	Mar 22, 2024	Approximate Sample 518g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_11	24-Ma0056371	Mar 22, 2024	Approximate Sample 450g / >500ml Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_12	24-Ma0056372	Mar 22, 2024	Approximate Sample 420g / >500ml Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_13	24-Ma0056373	Mar 22, 2024	Approximate Sample 311g / >500ml Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_14	24-Ma0056374	Mar 22, 2024	Approximate Sample 487g / >500ml Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_15	24-Ma0056375	Mar 22, 2024	Approximate Sample 559g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_16	24-Ma0056376	Mar 22, 2024	Approximate Sample 524g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_17	24-Ma0056377	Mar 22, 2024	Approximate Sample 346g / >500ml Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_18	24-Ma0056378	Mar 22, 2024	Approximate Sample 483g / >500ml Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_19	24-Ma0056379	Mar 22, 2024	Approximate Sample 568g Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	FA: Chrysotile asbestos detected in weathered fibre cement material. Approximate raw weight of FA = 0.019g Estimated asbestos content in FA = 0.0056g* Total estimated asbestos concentration in FA = 0.00099% w/w* No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
IX_20	24-Ma0056380	Mar 22, 2024	Approximate Sample 598g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IX_21	24-Ma0056381	Mar 22, 2024	Approximate Sample 599g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP09-E	24-Ma0056382	Mar 22, 2024	Approximate Sample 760g Sample consisted of: Brown fine-grained clayey sandy soil, sand stone, bitumen like material and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP09-S	24-Ma0056383	Mar 22, 2024	Approximate Sample 501g Sample consisted of: Brown coarse-grained clayey sandy soil, sand stone and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP09-W	24-Ma0056384	Mar 22, 2024	Approximate Sample 621g Sample consisted of: Brown coarse-grained clayey sandy soil, sand stone and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP09-N	24-Ma0056385	Mar 22, 2024	Approximate Sample 595g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP09-B	24-Ma0056386	Mar 22, 2024	Approximate Sample 618g Sample consisted of: Brown coarse-grained clayey sandy soil, sand stone and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_01	24-Ma0056387	Mar 22, 2024	Approximate Sample 765g Sample consisted of: Black fine-grained clayey sandy soil, bitumen like material and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_02	24-Ma0056388	Mar 22, 2024	Approximate Sample 567g Sample consisted of: Black fine-grained clayey sandy soil, organic debris, bitumen like material and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_03	24-Ma0056389	Mar 22, 2024	Approximate Sample 599g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_04	24-Ma0056390	Mar 22, 2024	Approximate Sample 544g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_05	24-Ma0056391	Mar 22, 2024	Approximate Sample 529g Sample consisted of: Grey coarse-grained clayey sandy soil, sand stone, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_06	24-Ma0056392	Mar 22, 2024	Approximate Sample 542g Sample consisted of: Brown fine-grained clayey sandy soil, plant matter and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
6C_07	24-Ma0056393	Mar 22, 2024	Approximate Sample 681g Sample consisted of: Red-Brown coarse-grained clayey soil and rocks	AF: Chrysotile asbestos detected in the form of loose fibre bundles. Approximate raw weight of AF = 0.94g* Estimated asbestos content in AF = 0.90g* Total estimated asbestos concentration in AF = 0.13% w/w* Organic fibre detected. No trace asbestos detected.
6C_08	24-Ma0056394	Mar 22, 2024	Approximate Sample 825g Sample consisted of: Brown fine-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_09	24-Ma0056395	Mar 22, 2024	Approximate Sample 604g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_10	24-Ma0056396	Mar 22, 2024	Approximate Sample 831g Sample consisted of: Black fine-grained clayey sandy soil, bitumen like material and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_11	24-Ma0056397	Mar 22, 2024	Approximate Sample 540g Sample consisted of: Brown fine-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_12	24-Ma0056398	Mar 22, 2024	Approximate Sample 630g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_13	24-Ma0056399	Mar 22, 2024	Approximate Sample 720g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_14	24-Ma0056400	Mar 22, 2024	Approximate Sample 849g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_15	24-Ma0056401	Mar 22, 2024	Approximate Sample 487g / >500ml Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_16	24-Ma0056402	Mar 22, 2024	Approximate Sample 500g Sample consisted of: Brown fine-grained sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
QC03	24-Ma0056403	Mar 22, 2024	Approximate Sample 592g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
QC04	24-Ma0056404	Mar 22, 2024	Approximate Sample 843g Sample consisted of: Black fine-grained clayey sandy soil, bitumen like material and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 25.3 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

Attention:	Samuel Knott
Report	1081385-AID
Project Name	ALDINGTON ROAD
Project ID	66105
Received Date	Mar 25, 2024
Date Reported	Mar 26, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON ROAD
Project ID 66105
Date Sampled Mar 25, 2024
Report 1081385-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1B2 _01	24-Ma0060222	Mar 25, 2024	Approximate Sample 506g Sample consisted of: Red-brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B2 _02	24-Ma0060223	Mar 25, 2024	Approximate Sample 577g Sample consisted of: Red-brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1B2 _03	24-Ma0060224	Mar 25, 2024	Approximate Sample 549g Sample consisted of: Red-brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

3	1B2 _03	Mar 25, 2024		Soil	S24-Ma0060224	X
Test Counts						3

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Attention:	Samuel Knott
Report	1081697-AID
Project Name	ALDINGTON_UF2
Project ID	66105
Received Date	Mar 26, 2024
Date Reported	Mar 28, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON_UF2
Project ID 66105
Date Sampled Mar 26, 2024
Report 1081697-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
UF2_B01	24-Ma0062347	Mar 26, 2024	Approximate Sample 544g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2_EW1	24-Ma0062348	Mar 26, 2024	Approximate Sample 526g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2_EW2	24-Ma0062349	Mar 26, 2024	Approximate Sample 437g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2_EW3	24-Ma0062350	Mar 26, 2024	Approximate Sample 507g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2_WW1	24-Ma0062351	Mar 26, 2024	Approximate Sample 525g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2_WW2	24-Ma0062352	Mar 26, 2024	Approximate Sample 478g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2_WW3	24-Ma0062353	Mar 26, 2024	Approximate Sample 553g Sample consisted of: Red- brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Test Counts						7

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ma0062349 and 24-Ma0062352: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Attention:	Samuel Knott
Report	1081847-AID
Project Name	ALDINGTON-263
Project ID	66105
Received Date	Mar 26, 2024
Date Reported	Mar 27, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON-263
Project ID 66105
Date Sampled Mar 26, 2024
Report 1081847-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
UF2-EW4	24-Ma0063222	Mar 26, 2024	Approximate Sample 657g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2-EW5	24-Ma0063223	Mar 26, 2024	Approximate Sample 576g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2-WW4	24-Ma0063224	Mar 26, 2024	Approximate Sample 573g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF2-WW5	24-Ma0063225	Mar 26, 2024	Approximate Sample 525g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IE-20A	24-Ma0063226	Mar 26, 2024	Approximate Sample 566g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
IE-19A	24-Ma0063227	Mar 26, 2024	Approximate Sample 491g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
QC260324	24-Ma0063228	Mar 26, 2024	Approximate Sample 647g Sample consisted of: Brown fine-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
UF1-01	24-Ma0063229	Mar 26, 2024	Approximate Sample 725.5g Sample consisted of: Brown fine-grained clayey soil, cement and rocks	AF: Chrysotile asbestos detected in fibre cement fragments. Approximate raw weight of AF = 0.0048g* Estimated asbestos content in AF = 0.00048g* Total estimated asbestos concentration in AF = 0.000066% w/w* No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected.
UF1-02	24-Ma0063230	Mar 26, 2024	Approximate Sample 520g Sample consisted of: Brown fine-grained clayey soil, plaster material and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ma0063227, Sample received was less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Attention:	Samuel Knott
Report	1085660-AID
Project Name	ALDINGTON-94
Project ID	66105
Received Date	Apr 09, 2024
Date Reported	Apr 10, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON-94
Project ID 66105
Date Sampled Apr 09, 2024
Report 1085660-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
UF1_01A	24-Ap0020329	Apr 09, 2024	Approximate Sample 575g Sample consisted of: Brown fine-grained clayey soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
UF1_02A	24-Ap0020330	Apr 09, 2024	Approximate Sample 520g Sample consisted of: Brown fine-grained clayey soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
6C_07A	24-Ap0020331	Apr 09, 2024	Approximate Sample 471g Sample consisted of: Brown fine-grained clayey soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
QC240409	24-Ap0020332	Apr 09, 2024	Approximate Sample 394g Sample consisted of: Brown fine-grained clayey soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1X_19A	24-Ap0020333	Apr 09, 2024	Approximate Sample 477g Sample consisted of: Brown fine-grained clayey soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ap0020331 to 24-Ap0020333: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Measurement uncertainty of test data is available on request or please click here.

Eurofins shall not be liable for loss, cost, damages or expenses incurred by the client, or any other person or company, resulting from the use of any information or interpretation given in this report. In no case shall Eurofins be liable for consequential damages including, but not limited to, lost profits, damages for failure to meet deadlines and lost production arising from this report. This document shall not be reproduced except in full and relates only to the items tested. Unless indicated otherwise, the tests were performed on the samples as received.

Appendix D QA/QC Assessment

QA/QC Results

The QA/QC result for soil samples collected are summarised in **Table D.1** and discussed below. Detailed QA/QC results are included following the discussion of DQI exceedances below.

Table D.1: QA/QC Results Summary

Data Quality Indicator	Results	DQO met?
Precision		
Blind duplicates (intra laboratory)	0-50% RPDs Intra laboratory samples were analysed at a rate just below the target 1 in 20 samples.	Partial [1]
Blind duplicates (inter laboratory)	0-50% RPDs Inter laboratory were analysed at a rate just below the target 1 in 20 samples.	Partial [1]
Laboratory duplicates	2-18% RPD Laboratory samples were analysed at a rate greater than 1 in 20 samples.	Yes
Accuracy		
Laboratory control samples (LCS)	70-130% recovery Laboratory control samples were completed at a suitable density with respect to laboratory batch size and sample analyses.	Yes
Surrogate spikes	64-68% Surrogate spikes were completed for all organic sample analyses	Partial [1]
Matrix spikes	70-130% recovery Matrix spikes were completed at a suitable density with respect to laboratory batch size and sample analyses.	Yes
Representativeness		
Samples extracted and analysed within holding times	All primary and duplicate samples were extracted within appropriate holding times.	Yes
Sampling appropriate for media and analytes	Samples were collected using appropriate methodology with regard to the sample media (soil) and analytes (volatile, semi-volatile and low volatility organics and inorganics)	Yes
Trip spike	70-130% One completed per sampling event and associated laboratory batch	Yes
Trip blank	<LOR One completed per sampling event and associated laboratory batch	Yes
Rinsate blank	Not required where no re-usable equipment was used	Yes
Laboratory Blank	<LOR One completed per sampling event and associated laboratory batch	Yes

©JBS&G Australia Pty Ltd

Data Quality Indicator	Results	DQO met?
Standard operating procedures used for sample collection and handling	Standard operating procedures used as listed in JBS&G (2024) employed for all sampling events and samples collected	Yes
Comparability		
Standard analytical methods used for all analyses	Standard analytical methods used as shown in **Appendix C**	Yes
Consistent field conditions, field staff and laboratories	Sampling was conducted by the same field staff member. Standard operating procedures were implemented throughout the works. Field conditions remained the same throughout the works.	Yes
Limits of reporting appropriate and consistent	Limits of reporting were consistent and appropriate	Yes
Completeness		
Soil description and COCs completed and appropriate	All field documentation and COCs were completed appropriately.	Yes
Appropriate documentation	All field documentation was appropriately completed.	Yes
Satisfactory frequency and result for QC samples	The QC results are considered adequate for the purposes of the investigation	Yes
Data from critical samples	Samples were analysed at locations designed to address the requirements of the RAP such that a suitable validation data set could be established. All critical samples were analysed for appropriate contaminants of concern and the QA/QC assessment confirmed the reliability of this data.	Yes
Sensitivity		
Analytical methods and limits of recovery appropriate for media and adopted site assessment criteria	Analytical methods and limits of recovery were considered appropriate for media and adopted site validation criteria for all soil analytes.	Yes

Notes: 1. See discussion below for notes

Precision

Soil Blind Duplicates (intra laboratory)

The rate of blind duplicate sampling and analysis for asbestos was 6 blind duplicate samples per 129 primary samples, which equates to approximately 1 blind duplicate per 21 primary samples, marginally outside the 1/20 requirement. A slightly reduced frequency for asbestos analysis is considered not to affect the precision of the data set, noting the large sample size given that all analytical data RPDs for all asbestos samples were 0% with no reported asbestos at or below the laboratory LOR in any blind duplicate sample.

The rate of blind duplicate sampling and analysis for TRH, PAH, OCP, PCB and heavy metals was below the nominated frequency. However, chemical analytical data RPDs were all within the DQI for laboratory duplicates.

Soil Split Duplicates (inter laboratory)

The rate of split duplicate sampling and analysis for asbestos was 6 split duplicate samples per 129 primary samples, which equates to approximately 1 blind duplicate per 21 primary samples, marginally outside the 1/20 requirement. A slightly reduced frequency for asbestos analysis is considered not to affect the precision of the data set, noting the large sample size given that all analytical data RPDs for all asbestos samples were 0% with no reported asbestos at or below the laboratory LOR in any split duplicate sample.

©JBS&G Australia Pty Ltd

The rate of split duplicate sampling and analysis for TRH, PAH, OCP, PCB and heavy metals was below the nominated frequency. However, chemical analytical data RPDs were all within the DQI for laboratory duplicates.

Laboratory Duplicates

The laboratory completed a total of 1 soil laboratory duplicate sample, within the JBS&G acceptance criteria of 1 in 20 samples. Laboratory duplicates analysed reported RPDs within the JBS&G DQI acceptance range of 0%-50%.

Accuracy

Laboratory Control Samples

A total of 7 soil and 1 water laboratory control samples (LCS) were tested, meeting the DQIs. All LCS were reported as having recoveries within the JBS&G acceptable range of 70-130%.

Surrogate Spikes

Surrogate spikes were conducted in conjunction with organic contaminant analysis of all samples. All surrogate spikes reported recoveries within the JBS&G acceptable range of 70%-130% with the exception of the following:

Lab Report Number	Sample Code	Field ID	Compound	Recovery %
Soil				
1079912	S24-Ma0047766	398_02	4-Bromofluorobenzene (surr.)	64
1079912	S24-Ma0047768	398_04	2-Fluorobiphenyl (surr.)	65
1079912	S24-Ma0047771	398_07	4-Bromofluorobenzene (surr.)	68

The surrogate spike recoveries outside of the target range are not considered to affect the overall reliability of the data set as concentrations in characterisation samples were close to or below the laboratory's LOR and/or within the laboratories NATA accredited limits (50%-150%).

Matrix Spikes

All matrix spikes reported recoveries within the JBS&G acceptable range of 70% – 130%.

Sampling appropriate for media and analytes

All sampling works completed during the investigation were conducted in accordance with JBS&G standard operating procedures as outlined in the Sampling, Analysis, and Quality Plan prepared for the assessment. Sample locations were undertaken for the purposes of visual inspection and/or olfactory assessment of fill/soil conditions and the collection of samples was considered appropriate for identified COPC.

All samples were collected wearing a new pair of disposable nitrile gloves.

Holding Times

Copies of Sample Receipt Notes (SRNs) are included in relevant sections of the report (**Appendix C**) and sample extraction/analysis dates were reported in each laboratory report. All soil analyses were undertaken within appropriate holding times for the respective analytes.

Trip Spike

A trip spike was submitted with characterisation samples which were submitted for chemical constituents collected during the assessment. All trip spike recoveries were generally within the JBS&G acceptable limit of 70%-130%.

Storage Blank

©JBS&G Australia Pty Ltd

A storage blank sample was carried during characterisation soil sampling events for chemical constituents and was submitted with the lab batch, meeting the overall nominated frequency thresholds. There were no reported concentrations of BTEX compounds above the laboratory LOR, achieving the nominated DQIs.

Rinsate Blank

A rinsate sample was not required as the sampling events for chemical constituents did not involve the use of re-usable equipment.

Laboratory Blank

One Laboratory blank was completed per sampling event (for chemical constituents) and analytes were all below the laboratory limit of reporting LOR.

Experienced JBS&G personnel undertook all sampling in accordance with standard JBS&G sampling methods.

The laboratory LORs are consistent and are considered appropriate.

Comparability

Eurofins, the primary laboratory, and Envirolab, the secondary laboratory were NATA accredited for all analytical methods used. The laboratories used similar analytical methods and the analytical data was considered to be comparable between the laboratories as indicated by the results of inter-laboratory duplicate analyses. Where different LORs were adopted by the laboratories, the primary laboratory typically had a lower LOR than the secondary laboratory, and as such, consideration of the data set was not impacted.

Furthermore, the samples collected for assessment purposes are considered comparable as all samples were collected by experienced JBS&G personnel in accordance with standard JBS&G sampling methods.

Completeness

Documentation

All laboratory and field documentation is complete and correct. Chain of custody documentation is provided with laboratory reports in **Appendix C.**

Frequency for QC Samples

QC sample frequency DQOs was just below the target for asbestos analyses, and laboratory duplicates were achieved for chemical analysis and therefore the data set is complete and reliable.

Assessment of QA/QC

The field sampling and handling procedures produced QA/QC results which indicate that the collected soil analytical data are of an acceptable quality and suitable for use which respect to characterisation of the assessment area.

The NATA certified laboratory results sheets indicate that the project laboratory was generally achieving levels of performance within its recommended control limits during the period when the samples for this project were analysed.

On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality in order to achieve the objectives of the validation assessment.

JBS&G 66105/ 158427
L003 - In-Situ Waste Classification, Asbestos Impacted Material TP460, TP463 Rev A.

19 March 2024

Monica Ngo
Frasers Property Industrial Pty Ltd

In-Situ Waste Classification, Asbestos Impacted Material at TP460 and TP463, Edge South Development, Aldington Road, Kemps Creek (Rev A)

Dear Monica,

JBS&G Australia Pty Ltd (JBS&G) was engaged by Frasers Property Industrial Pty Ltd (FPI, the client) to provide a waste classification for off-site disposal of material associated with the excavation and removal of ACM impacted fill material within a portion of Lot 25 designated as area 1f/3c, within the eastern section of the Edge South Development, 199 Aldington Road, Kemps Creek, NSW (the site). Asbestos in the form of ACM was detected in two test pits (TP460 and TP463). The location of the site and material (to which this waste classification pertains) are shown on **Figures 1** and **2** respectively (**Attachment 2**).

Details of the site, material encountered, and waste classification are provided below. The limitations included in **Attachment 1** apply to the advice provided herein.

1. Site and Assessment Area Legal Identifiers and Owner

Site Lot/DP and Address	Lot 33/ DP 258949 155 to 167 Aldington Road, Kemps Creek, NSW, 2178 Lot 28/ DP 255560 169 to 181 Aldington Road, Kemps Creek, NSW, 2178 Lot 27/ DP 255560 183 to 197 Aldington Road, Kemps Creek, NSW, 2178 Lot 26/ DP 255560 199 Aldington Road, Kemps Creek, NSW, 2178 Lot 25/ DP 255560 201 to 217 Aldington Road, Kemps Creek, NSW, 2178 Lot 24/DP 255560 219 to 233 Aldington Road, Kemps Creek, NSW 2178 Lot 10/DP 253503 235 to 251 Aldington Road, Kemps Creek, NSW 2178
Site (waste) Occupant	Frasers Property Industrial Pty Ltd
Local Government Authority	Penrith City Council
Site Area (total)	63.6
Investigation Area	Eastern section of the site as shown in **Figure 2**, being approximately 3,300 m^2 in area.

2. Consultant Preparing Waste Classification

Name	JBS&G Australia Pty Ltd
Australian Business Number (ABN)	62 100 220 479
Address	Level 1, 50 Margaret Street, Sydney, NSW 2000.
Person(s) Providing Waste Classification	Samuel Knott

3. Desktop Review

Site Setting	The portion of the site in which the materials are located was observed to comprise agricultural uses of grazing and horticulture, as well as being

	previously occupied by high voltage transmission lines which are no longer present. The site and surrounding areas largely comprise a mixture of agricultural and rural residential properties, as well as a construction site opposite 219-233 Aldington Road.
Production History of Materials	Materials the subject of this waste classification comprise in-situ fill (of unknown origin) which is proposed to be excavated to remove identified asbestos, as shown on **Figure 2** (**Attachment 2**). This advice specifically relates to material identified in TP460 and TP463, within the area marked in green and purple stripes (1f/3c) on **Figure 2**, where asbestos containing material (ACM) was identified during site investigation activities as discussed herein.
Acid Sulfate Soil (ASS)	Review of data using the SEED[1] tool, indicates the area occupied by the site is within an area not assessed for the presence of Acid Sulfate Soils (ASS). Such sites are identified by default, as areas where land management activities are not likely to be affected by ASS materials.
Potential Contaminating Activities?	Potentially contaminating activities identified during the site assessment include the previous importation and placement of fill materials across the site to establish current site levels, (poor) demolition of previous structures on site, potential impacts associated with former agricultural land uses (i.e. residences, sheds and roading), and stockpiling of wastes associated with residences and agricultural practices.

4. Material Characterisation and Sampling Rationale

Area/GPS Coordinates	See **Figure 1** and **2** (**Attachment 2**) for approximate location of the Assessment Area and sampling locations.
Estimated volume (m3)	Approximately 150 m^3 within the 1f/3c area, as shown in **Figure 2**.
Sampling Method	A total of 16 sample locations (TP449 to TP464 and BH43) were completed across the Assessment Area 1f/3c as part of assessment works undertaken during April 2021, as documented in JBS&G (2021[2]). Test pits were advanced utilising an excavator and/or backhoe and soil samples were collected directly from the bucket at regular intervals from the surface soils (<0.1 m), then at a minimum of every metre interval to maximum depth of 4.7 m bgs. At one location, a borehole was manually advanced via the use of hand tools (hand auger/shovel) and samples were collected at regular intervals from the surface soils (<0.1 m) to a maximum depth of 1.2 m bgs. Representative samples were collected via a gloved hand using a fresh pair of disposable nitrile gloves at each sample location and placed into laboratory supplied jars and bags. During sample collection material was inspected for any potential indicators of contamination including staining, odours or asbestos containing material (ACM). All samples were immediately placed into a chilled esky prior to delivery to the laboratory under appropriate chain of custody (COC) procedures.
Material Identification	Review of JBS&G field observations and the borehole logs has identified the in-situ fill material within the Assessment Area was generally characterised as a heterogenous brown – dark grey, silty sandy clay or clayey silt with inclusions of concrete, building & demolition waste, potential ACM fragments, trace igneous gravels and rootlets. No odours or discolouration/staining were observed throughout the fill material, including odours or features (i.e. jarosite, sulfidic ores, shell material, and/or staining) which may indicate the presence of ASS.

1 https://www.seed.nsw.gov.au/ accessed 12 April 2021

2 *Frasers Property Industrial Constructions Pty Ltd Detailed Site Investigation, Aldington Road Estate 155-167, 169-181, 183-197, 199 and 201-217, Aldington Road, Kemps Creek, NSW,* dated 11 August 2021, reference: 60482/137852 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2021)

Visible Signs of Contamination?	No
Visible ACM?	Yes
Visible Putrescible Material?	No
Number of Samples and Sample IDs	The JBS&G sampling activities included a total of 8 primary soil samples from 16 sampling locations submitted for laboratory analysis for chemical contaminants of potential concern (COPC). All 16 locations were assessed for asbestos. The analytical summary tables are presented as **Tables A**, and **B** (**Attachment 4**), with laboratory reports provided in **Attachment 5.**
Rational for Sampling Design	JBS&G undertook sampling in general accordance with the guidance for systematic grid-based sampling provided in EPA (2022[3]) *Sampling design part 1 – application, Contaminated Land Guidelines*, whereby a minimum of 11 approximately evenly spaced sampling locations are required to characterise an area of up to 0.4 ha. Samples were selected for analysis based on the anticipated depth of material potentially requiring off-site disposal, and where distinct lithologies were encountered. A total of 8 samples were analysed from the Assessment Area, and all locations (16) were quantified for asbestos. This is considered appropriate to characterise the fill material consistent with the requirements of EPA (2022), and provides a basis for assessment of materials in relation to EPA (2014[4]). On this basis, the samples collected herein are considered to have appropriately characterised the material such that decisions may be made regarding a waste classification as per requirements.
QA/QC Assessment	A trip spike and blank were sent with the samples to ensure there was no loss of volatile organic compounds (VOCs) during transport, where analysis for VOCs was undertaken. The field sampling and handling procedures produced quality assurance (QA) and quality control (QC) results which indicate that the collected soil analytical data are of an acceptable quality and suitable for use as part of the waste classification assessment. The NATA certified laboratory results sheets indicate that the project laboratory was generally achieving levels of performance within its recommended control limits during the period when the samples for this project were analysed. On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality in order to achieve the objectives of the current assessment.
Toxicity Characteristic Leaching Procedure (TCLP) Samples	No
Sampling Date	JBS&G sampling event(s): 8 April 2021, 9 April 2021

5. Laboratory Analysis

Laboratory	Primary Laboratory: Eurofins
All laboratory methods NATA certified?	Yes

[3] *Contaminated Land Guidelines, Sampling design part 1 – application*, NSW Environment Protection Authority, August 2022 (EPA 2022)

[4] *Waste Classification Guidelines Part 1: Classifying Waste,* NSW EPA (2014).

Contaminants of Concern	Total recoverable hydrocarbons (TRH), Total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene and xylenes (BTEX), benzo(a)pyrene, polycyclic aromatic hydrocarbons (PAH), Herbicides & Fungicides, heavy metals (As, Cd, Cr, Pb, Hg, Ni), Asbestos and phenols.
Laboratory Report Attached?	Yes (**Attachment 5**)
Additional Data Sources?	No
Is the material covered by a General Immobilisation Approval?	No
Discussion of Results	A review of the laboratory analysis results has identified that contaminant concentrations in the Assessment Area were reported as consistently low, and below the contaminant threshold (CT1) for general solid waste (GSW) in the *NSW EPA (2014) Waste Classification Guidelines – Part 1: Classifying Waste*. However, asbestos in the form of ACM was observed at two location (TP460 2.0-3.0 and TP463 0.8-1.8), with laboratory analysis confirming Chrysotile in TP463 0.8-1.8. Detailed laboratory results are provided in **Attachment 5**.

6. Waste Classification

Waste Classification	**Special Waste (Asbestos) mixed with General Solid Waste (GSW) non-putrescible** This waste classification only applies to the materials at sample location TP460 and TP463.
Does 'Special Waste' apply?	Yes – Asbestos Waste The waste classification described herein only applies asbestos impacted materials observed at TP460 and TP463.
Is the Material Classified as 'Hazardous Waste'?	No
Classification Comments	Should the material requiring off-site disposal be inconsistent with those described herein, additional assessment may be required, and JBS&G should be contacted to reassess the material prior to disposal. Additionally, it is recommended that JBS&G be present onsite during removal and disposal of asbestos contaminated fill materials described herein to ensure appropriate removal of impacted materials.
Disposal Comments	Waste must be transported by an appropriately licensed transporter and disposed to a facility that is licensed to receive that class of waste. Waste must be managed in accordance with relevant guidelines and regulations during loading, transport, unloading and disposal.

Notes

1. The estimated volume of waste is an indicative estimate only based on either client-supplied data or field observations including estimated elevation, extent and/or depths. For material characterised in-situ, a bulking factor may be applied.
2. Material observations including those relating to visible ACM and putrescible materials were made prior to material leaving the source site.
3. Wastes that are generally classified as putrescible include: green waste, agricultural, forestry and crop materials, and natural fibrous organic and vegetative materials, as per EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
4. Materials have been classified in accordance with EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
5. The disposal Facility or Facilities must be appropriately licensed under Schedule 1, Section 39; "Waste Disposal (Application to Land)", of the *Protection of the Environment Operations (POEO) Act 1997*. Disposal of 'Asbestos Waste', as defined under the Act and associated Waste Guidelines, is required to be managed in accordance with the *Protection of the Environment Operations (Waste) Regulation 2014* in terms of loading, transport, unloading and disposal. The *POEO Act 1997* states that if waste is transported to a facility not lawfully authorised as a waste facility for that waste, the owner, transporter and receiver of the waste are each guilty of an offence. The owner of waste includes, in relation to waste that has been transported, the person who was the owner of the waste immediately before it was transported. There are special considerations for transport and management including disposal of asbestos waste under the POEO (Waste) Regulation, including tracking and reporting of asbestos waste using NSW EPA Integrated Waste Tracking Solution (IWTS).

Should you require clarification, please contact Sam Knott on 02 8245 0300 or by email sknott@jbsg.com.au.

Attachment 1 – Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties. The report has been prepared specifically for the client for the purposes of the commission, and no warranties, express or implied, are offered to any third parties and no liability will be accepted for use or interpretation of this report by any third party.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose. This report should not be amended in any way without prior approval by JBS&G, or reproduced other than in full including all attachments as originally provided to the client by JBS&G.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements or agreed scope of work.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 9:02 AM
Eurofins reference	786610

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.1 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples BH369 0.5-0.6 not received, switched from hold to cancelled. Samples TP495 0.0-0.4, BH351 0.1-0.2, BH335 0.0-0.2, BH348 0.0-0.2, BH350 0.0-0.2, BH335 0.0-0.2, BH386 0.0-0.1, BH344 0.0 - 0.2, BH348 0.4-0.5, BH334 0.4-0.5, BH335 0.4-0.5, BH349 0.4-0.5, BH350 0.4-0.5, BH351 0.4-0.5 and BH355 0.4-0.5 appeared multiple times on the COC, samples logged with all analysis. PFAS analysis cancelled due to incorrect containers. Samples BHX (jar), BH380 0.0-0.1 (bag), BH362 (bag) and a blank bag received not on COC, logged on hold.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Attention:	Ryan Lill
Report	786610-AID
Project Name	KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 12, 2021
Date Reported	Apr 20, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Project Name KEMPS CREEK DSI
Project ID 60482
Date Sampled Apr 08, 2021
Report 786610-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
TP450 2-2.5	21-Ap17395	Apr 08, 2021	Approximate Sample 404g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP451 1-2	21-Ap17396	Apr 08, 2021	Approximate Sample 522g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP457 2-2.5	21-Ap17397	Apr 08, 2021	Approximate Sample 405g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP452 1-2	21-Ap17398	Apr 08, 2021	Approximate Sample 435g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP460 2-2.6	21-Ap17399	Apr 08, 2021	Approximate Sample 525g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP449 0.3-0.9	21-Ap17400	Apr 08, 2021	Approximate Sample 478g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP461 1-2	21-Ap17401	Apr 08, 2021	Approximate Sample 470g Sample consisted of: Brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP454 0.7-1.2	21-Ap17402	Apr 08, 2021	Approximate Sample 442g Sample consisted of: Brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
TP456 2.8-3	21-Ap17403	Apr 08, 2021	Approximate Sample 418g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP445 1-1.8	21-Ap17411	Apr 08, 2021	Approximate Sample 513g Sample consisted of: Brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP459 1.4-2.4	21-Ap17415	Apr 08, 2021	Approximate Sample 522g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Ap17395, Ap17397, Ap17398, Ap17400 to Ap17403: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Nickel	5	mg/kg	11
Zinc	5	mg/kg	97
% Moisture	1	%	18

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B4			
Polycyclic Aromatic Hydrocarbons	Sydney	Apr 18, 2021	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Metals M8	Sydney	Apr 19, 2021	180 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
% Moisture	Sydney	Apr 13, 2021	14 Days
- Method: LTM-GEN-7080 Moisture			
Acid Herbicides	Melbourne	Apr 16, 2021	14 Days
- Method: LTM-ORG-2180 Phenoxy Acid Herbicides			
Organochlorine Pesticides	Sydney	Apr 18, 2021	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	Apr 18, 2021	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
G01	The LORs have been raised due to matrix interference
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

eurofins | Environment Testing

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram | **mg/L:** milligrams per litre | **ug/L:** micrograms per litre

ppm: Parts per million | **ppb:** Parts per billion | **%:** Percentage

org/100mL: Organisms per 100 millilitres | **NTU:** Nephelometric Turbidity Units | **MPN/100mL:** Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
BTEX							
Benzene	mg/L	< 0.001			0.001	Pass	
Toluene	mg/L	< 0.001			0.001	Pass	
Ethylbenzene	mg/L	< 0.001			0.001	Pass

o-Xylene	mg/L	< 0.001			0.001	Pass	
Xylenes - Total*	mg/L	< 0.003			0.003	Pass	
LCS - % Recovery							
BTEX							
Benzene	%	91			70-130	Pass	
Toluene	%	94			70-130	Pass	
Ethylbenzene	%	93			70-130	Pass	
m&p-Xylenes	%	93			70-130	Pass	
o-Xylene	%	92			70-130	Pass	
Xylenes - Total*	%	92			70-130	Pass	

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Waste Classification (TP398), Aldington Road Kemps Creek NSW

Dear Monica,

JBS&G Australia Pty Ltd (JBS&G) was engaged by Frasers Property Industrial Pty Ltd (Frasers, the client) to provide a waste classification for off-site disposal of material associated with the excavation and removal of fill material at historical test-pit location 'TP398' located in the western portion of the site designated as 'Area 6c' within the Edge South Development Site, Aldington Road Kemps Creek NSW. The location of the site and material (to which this waste classification pertains) are shown in **Figures 1** and **2** respectively (**Attachment 2**).

A Detailed Site Investigation (DSI, JBS&G 2021[1]) and subsequent Remediation Action Plan (RAP, JBS&G 2024[2]) was prepared for the site which outlined a number of remedial areas including 'Area 6c' identified to comprise contamination requiring remediation and/or management. Specific to 'Area 6c', elevated hydrocarbon concentrations above land use criteria were identified within historical test-pit location 'TP398' at a depth between the surface and 0.25 m below ground surface (bgs) requiring removal.

The materials were excavated and stockpiled. JBS&G collected soil samples for laboratory analysis. Soil samples were analysed for contaminants of potential concern (COPCs) including total recoverable hydrocarbons (TRH), benzene, toluene, ethylbenzene, and xylenes (BTEX), polycyclic aromatic hydrocarbons (PAHs), PCBs, organochlorine pesticides (OCPs), heavy metals (As, Cd, Cr, Pb, Hg, Ni) and asbestos.

Details of the site, material encountered, and waste classification are provided below. The limitations included in **Attachment 1** apply to the advice provided herein.

1. Site and Assessment Area Legal Identifiers and Owner

Site Lot/DP	Lot 33/ DP 258949 155 to 167 Aldington Road, Kemps Creek, NSW, 2178 Lot 28/ DP 255560 169 to 181 Aldington Road, Kemps Creek, NSW, 2178 Lot 27/ DP 255560 183 to 197 Aldington Road, Kemps Creek, NSW, 2178 Lot 26/ DP 255560 199 Aldington Road, Kemps Creek, NSW, 2178 Lot 25/ DP 255560 201 to 217 Aldington Road, Kemps Creek, NSW, 2178 Lot 24/DP 255560 219 to 233 Aldington Road, Kemps Creek, NSW 2178 Lot 10/DP 253503 235 to 251 Aldington Road, Kemps Creek, NSW 2178
Site (waste) Occupant	Frasers Property Industrial Pty Ltd
Local Government Authority	Penrith Council

[1] *Frasers Property Industrial Constructions Pty Ltd, Detailed Site Investigation, Aldington Road Estate, 155-167, 169-181, 183-197, 199 and 201-217, Aldington Road, Kemps Creek, NSW*, dated 11 August 2021, reference: 60482/137852 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2021)

[2] *Frasers Property Industrial Pty Ltd, Remediation Action Plan, Aldington Road Estate, Edge South Development, Aldington Road, Kemps Creek*, dated 5 February 2024, reference: 65376|157278 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2024)

Site Area (total)	63.6 ha (636,000 m^3)
Investigation Area	Material from historic location TP398 as shown in **Figure 2.**

2. Consultant Preparing Waste Classification

Name	JBS&G Australia Pty Ltd
Australian Business Number (ABN)	62 100 220 479
Address	Level 1, 50 Margaret Street, Sydney, NSW 2000.
Person(s) Providing Waste Classification	Samuel Knott / Massimo Chapman

3. Desktop Review

Site Setting	The portion of the site in which the materials are located was observed to comprise agricultural uses of grazing and horticulture. The site and surrounding areas largely comprise a mixture of agricultural and rural residential properties, as well as a construction site opposite 219-233 Aldington Road.
Production History of Materials	Materials subject to this waste classification comprise stockpiled fill material (of unknown origin) which was excavated from TP398 and surrounding across an area of 30 m^2 and to a depth of 0.5 m (**Figure 2, Attachment 2**). This advice specifically relates to material identified within the area marked on **Figure 2** (**Attachment 2**), where hydrocarbon contaminated material was previously identified. Photographs of the material described herein are provided in the Photographic Log (**Attachment 3**).
Acid Sulfate Soil (ASS)	Review of data using the SEED[3] tool, indicates the area occupied by the site is within an area not assessed for the presence of Acid Sulfate Soils (ASS). Such sites are identified by default, as areas where land management activities are not likely to be affected by ASS materials. Review of the geographical and topographical location of the assessment area, in addition to the geological conditions identified at the site has indicated that the likelihood of ASS within the study area is low.
Potential Contaminating Activities?	Potentially contaminating activities identified within the DSI (JBS&G 2021) and/or otherwise include historical rural residential and agricultural grazing activities, potential maintenance of crops via the use of pesticides, and potentially hazardous building materials within site structures.

4. Material Characterisation and Sampling Rationale

Area/GPS Coordinates	See **Figure 1** and **2** (**Attachment 2**) for approximate location of the historical test-pit location TP398, and stockpiled materials.
Estimated volume (m3)	Approximately 30 m^2 was excavated and stockpiled adjacent to historical test-pit location TP398.
Sampling Method	A total of 3 samples were collected. At each location, soil samples were collected at least 0.3 m from the surface of the stockpile and are considered representative of the excavated materials. Representative samples were collected via a gloved hand using a fresh pair of disposable nitrile gloves at each sample location and placed into laboratory supplied jars and bags. During sample collection material was inspected for any potential indicators of contamination including staining, odours or asbestos containing material (ACM).

[3] https://www.seed.nsw.gov.au/ accessed 14 March 2024

	All samples were immediately placed into a chilled esky prior to delivery to the laboratory under appropriate chain of custody (COC) procedures.
Material Identification	Material was characterised as a heterogenous brown, gravelly sand, with inclusions of slag and ash and glass. No odours or discolouration/staining were observed throughout the fill material. Photographs of the materials are provided in **Attachment 3**.
Visible Signs of Contamination?	No
Visible ACM?	No
Visible Putrescible Material?	No
Number of Samples and Sample IDs	The JBS&G sampling activities included a total of 3 primary soil samples submitted for laboratory analysis for chemical contaminants of potential concern (COPC). The analytical summary tables are presented as **Tables A** and **B** (**Attachment 4**) with JBS&G laboratory reports provided in **Attachment 5.** Historic data from JBS&G (2021) has been included as **Table C (Attachment 4)**.
Rational for Sampling Design	JBS&G undertook sampling in general accordance with the guidance for stockpile sampling provided in EPA (2022[4]) *Sampling design part 1 – application, Contaminated Land Guidelines*, whereby a minimum of 3 sampling locations are required to characterise up to 75 m^3 of material. On this basis, the samples collected herein are considered to have appropriately characterised the material such that decisions may be made regarding a waste classification as per requirements.
QA/QC Assessment	The field sampling and handling procedures produced quality assurance (QA) and quality control (QC) results which indicate that the collected soil analytical data are of an acceptable quality and suitable for use as part of the waste classification assessment. The NATA certified laboratory results sheets indicate that the project laboratory was generally achieving levels of performance within its recommended control limits during the period when the samples for this project were analysed. On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality in order to achieve the objectives of the current assessment.
Toxicity Characteristic Leaching Procedure (TCLP) Samples	Yes, as presented in **Table B** (**Attachment 4**)
Sampling Date	JBS&G sampling event(s): 14 March 2024

5. Laboratory Analysis

Laboratory	Primary Laboratory: Eurofins
All laboratory methods NATA certified?	Yes
Contaminants of Concern	Total recoverable hydrocarbons (TRH), benzene, toluene, ethylbenzene and xylenes (BTEX), benzo(a)pyrene, polycyclic aromatic hydrocarbons (PAH), polychlorinated biphenyls (PCB), organochlorine pesticides (OCP), heavy metals (As, Cd, Cr, Pb, Hg, Ni), Asbestos, VOCs (Volatile Organic Compounds), and Toxicity Characteristic Leaching Procedure (TCLP) for B(a)P.
Laboratory Report Attached?	Yes (**Attachment 5**)

[4] *Contaminated Land Guidelines, Sampling design part 1 – application*, NSW Environment Protection Authority, August 2022 (EPA 2022)

Additional Data Sources?	As discussed above, previous investigations undertaken by JBS&G (2021) identified fill materials within TP398 to a depth of approximately 0.25 m. Fill material was reported as black (stained) silty gravel, with some inclusions of road based gravels. Fill was underlain by reddish brown clay. Historical results have been included as part of the discussion of results below.
Is the material covered by a General Immobilisation Approval?	Yes, *1999/05 – Ash, ash contaminated natural excavated materials or coal contaminated natural excavated materials.* Ash was noted in the material during excavation, and TCLP results are consistent with the limit of the General Immobilisation Approval.
Discussion of Results	For the purposes of this classification, a total of 3 relevant samples were analysed for COPCs, with the results of historic investigations incorporated into the current assessment. Review of the laboratory analysis results has identified that contaminant concentrations were reported to be below the contaminant threshold (CT1) for general solid waste (GSW) in the *NSW EPA (2014) Waste Classification Guidelines – Part 1: Classifying Waste* with the exception of: • Benzo(a)pyrene [B(a)P]- concentrations ranged from 29 to 170 mg/kg, with all 3 results in excess of the CT2 criteria. All samples were reported as exceeding the SCC1 and SCC2 criteria. TCLP preparation and analysis of leachate samples for B(a)P was undertaken to characterise the leachable concentration of B(a)P, as per EPA (2014). All samples reported results below the laboratory limit of reporting and/or the TCLP1 leachate criteria for B(a)P. It is noted that TCLP analysis was not conducted on the historic sample at TP398. However, the concentrations of COPC (in particular B(a)P) are considered consistent with the results of this waste assessment. Therefore, the classification can be made using the current TCLP data set. All other contaminant concentrations were less than the relevant CT1/SCC1 criteria. Detailed laboratory results are provided in **Attachment 5**.

6. Waste Classification

Waste Classification	**General Solid Waste (GSW) non-putrescible** This waste classification only applies to the materials stockpiled from the excavation of TP398 shown in **Figure 2**, **Attachment 2**.
Does 'Special Waste' apply?	No
Is the Material Classified as 'Hazardous Waste'?	No
Classification Comments	The classification applies to the material identified in the relevant TP398 excavation area shown on **Figure 2**. The waste classification documented herein has been undertaken in accordance with the *Waste Classification Guidelines, Part 1: Classifying Waste (NSW EPA 2014)* and *1999/05 – Ash, ash contaminated natural excavated materials or coal contaminated natural excavated material* general immobilisation order.
Disposal Comments	Waste must be transported by an appropriately licensed transporter and disposed to a facility that is licensed to receive that class of waste, including waste classified under the general immobilisation order *1999/05 – Ash, ash contaminated natural excavated materials or coal contaminated natural excavated materials.* Waste must be managed in accordance with relevant guidelines and regulations during loading, transport, unloading and disposal.

Notes

1. The estimated volume of waste is an indicative estimate only based on either client-supplied data or field observations including estimated elevation, extent and/or depths. For material characterised in-situ, a bulking factor may be applied.
2. Material observations including those relating to visible ACM and putrescible materials were made prior to material leaving the source site.
3. Wastes that are generally classified as putrescible include: green waste, agricultural, forestry and crop materials, and natural fibrous organic and vegetative materials, as per EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
4. Materials have been classified in accordance with EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
5. The disposal Facility or Facilities must be appropriately licensed under Schedule 1, Section 39; "Waste Disposal (Application to Land)", of the *Protection of the Environment Operations (POEO) Act 1997*. Disposal of 'Asbestos Waste', as defined under the Act and associated Waste Guidelines, is required to be managed in accordance with the *Protection of the Environment Operations (Waste) Regulation 2014* in terms of loading, transport, unloading and disposal. The *POEO Act 1997* states that if waste is transported to a facility not lawfully authorised as a waste facility for that waste, the owner, transporter and receiver of the waste are each guilty of an offence. The owner of waste includes, in relation to waste that has been transported, the person who was the owner of the waste immediately before it was transported. There are special considerations for transport and management including disposal of asbestos waste under the POEO (Waste) Regulation, including tracking and reporting of asbestos waste using NSW EPA Integrated Waste Tracking Solution (IWTS).

Should you require clarification, please contact Sam Knott on 02 8245 0300 or by email sknott@jbsg.com.au.

Attachment 1 – Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties. The report has been prepared specifically for the client for the purposes of the commission, and no warranties, express or implied, are offered to any third parties and no liability will be accepted for use or interpretation of this report by any third party.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose. This report should not be amended in any way without prior approval by JBS&G, or reproduced other than in full including all attachments as originally provided to the client by JBS&G.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements or agreed scope of work.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information

Turnaround time:	1 Day
Date/Time received	Mar 14, 2024 6:25 PM
Eurofins reference	1078200

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 7.4 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

please ensure small sized asbetsos bags are used when only ID analysis is required - only approx 50g is required.
Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Samuel Knott
Report	1078200-AID
Project Name	ALDINGTON ROAD
Project ID	66105
Received Date	Mar 14, 2024
Date Reported	Mar 15, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON ROAD
Project ID 66105
Date Sampled Mar 14, 2024
Report 1078200-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
398-01	24-Ma0034053	Mar 14, 2024	Approximate Sample 889g Sample consisted of: Brown fine-grained clayey soil, bitumen, organic debris, metal, glass and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
398-02	24-Ma0034054	Mar 14, 2024	Approximate Sample 840g Sample consisted of: Brown fine-grained clayey soil, bitumen, organic debris and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.
398-03	24-Ma0034055	Mar 14, 2024	Approximate Sample 813g Sample consisted of: Brown fine-grained clayey soil, bitumen, organic debris and rocks	No asbestos detected at the reporting limit of 0.01% w/w. Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit	**Colour:** Pt-Co Units	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 70 – 130%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
G01	The LORs have been raised due to matrix interference
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 7.4 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony forming unit	**Colour:** Pt-Co Units	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 70 – 130%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test			Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank									
Polycyclic Aromatic Hydrocarbons									
Benzo(a)pyrene			mg/L	< 0.001			0.001	Pass

JBS&G 66105/ 158,645
L004 - In-Situ Waste Classification, Asbestos Impacted Material 1E-19 Rev A.

26 March 2024

Monica Ngo
Frasers Property Industrial Pty Ltd

In-Situ Waste Classification, Asbestos Impacted Material 1E-19, Edge South Development, Aldington Road, Kemps Creek (Rev A)

Dear Monica,

JBS&G Australia Pty Ltd (JBS&G) was engaged by Frasers Property Industrial Pty Ltd (FPI, the client) to provide a waste classification for off-site disposal of material associated with the excavation and removal of asbestos fines (AF) impacted fill material within a portion of Lot 25 designated as area 1e/4f, within the eastern section of the Edge South Development, 199 Aldington Road, Kemps Creek, NSW (the site). Remedial extent validation samples were collected across area 1e/4f, with asbestos detected in the form of AF at sample location 1E-19. The waste classification documented herein, was prepared using historical data collected from area 1e/4f as part of assessment works undertaken during April 2021, as documented in JBS&G (2021[1]). The location of the site and material (to which this waste classification pertains) are shown on **Figures 1** and **2** respectively (**Attachment 2**).

Details of the site, material encountered, and waste classification are provided below. The limitations included in **Attachment 1** apply to the advice provided herein.

1. Site and Assessment Area Legal Identifiers and Owner

Site Lot/DP and Address	Lot 33/ DP 258949 155 to 167 Aldington Road, Kemps Creek, NSW, 2178 Lot 28/ DP 255560 169 to 181 Aldington Road, Kemps Creek, NSW, 2178 Lot 27/ DP 255560 183 to 197 Aldington Road, Kemps Creek, NSW, 2178 Lot 26/ DP 255560 199 Aldington Road, Kemps Creek, NSW, 2178 Lot 25/ DP 255560 201 to 217 Aldington Road, Kemps Creek, NSW, 2178 Lot 24/DP 255560 219 to 233 Aldington Road, Kemps Creek, NSW 2178 Lot 10/DP 253503 235 to 251 Aldington Road, Kemps Creek, NSW 2178
Site (waste) Occupant	Frasers Property Industrial Pty Ltd
Local Government Authority	Penrith City Council
Site Area (total)	63.6
Investigation Area	Eastern section of the site as shown in **Figure 2**, being approximately 1,720 m^2 in area.

[1] *Frasers Property Industrial Constructions Pty Ltd Detailed Site Investigation, Aldington Road Estate 155-167, 169-181, 183-197, 199 and 201-217, Aldington Road, Kemps Creek, NSW,* dated 11 August 2021, reference: 60482/137852 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2021)

2. Consultant Preparing Waste Classification

Name	JBS&G Australia Pty Ltd
Australian Business Number (ABN)	62 100 220 479
Address	Level 1, 50 Margaret Street, Sydney, NSW 2000.
Person(s) Providing Waste Classification	Jordan Rides

3. Desktop Review

Site Setting	The portion of the site in which the materials are located was observed to comprise residential and shed structures associated with the agricultural use of the site. The site and surrounding areas largely comprise a mixture of agricultural and rural residential properties, as well as a construction site opposite 219-233 Aldington Road.
Production History of Materials	Materials the subject of this waste classification comprise in-situ fill (of unknown origin) which is to be excavated to remove identified asbestos fines, as shown on **Figure 2** (**Attachment 2**). This advice specifically relates to material within the 1e/4f remedial extent, within the area marked in blue and green stripes on **Figure 2**.
Acid Sulfate Soil (ASS)	Review of data using the SEED[2] tool, indicates the area occupied by the site is within an area not assessed for the presence of Acid Sulfate Soils (ASS). Such sites are identified by default, as areas where land management activities are not likely to be affected by ASS materials.
Potential Contaminating Activities?	Potentially contaminating activities identified during the site assessment include the previous importation and placement of fill materials across the site to establish current site levels, (poor) demolition of previous structures on site, potential impacts associated with former agricultural land uses (i.e. residences, sheds and roading), and stockpiling of wastes associated with residences and agricultural practices.

4. Material Characterisation and Sampling Rationale

Area/GPS Coordinates	See **Figure 1** and **2** (**Attachment 2**) for approximate location of the Assessment Area and sampling locations.
Estimated volume (m3)	Approximately 12 m^3 represented by 1E-19 within the 1e/4f area, as shown in **Figure 2**.
Sampling Method	A total of 15 sample locations (BH434 to BH443, BH446, BH447, TP445, TP448 and TP458) were completed across the Assessment Area 1e/4f as part of assessment works undertaken during April 2021, as documented in JBS&G (2021[3]). Boreholes were advanced utilising a track mounted drill-rig with solid flight auger attachments and soil samples were collected directly from the augers at regular intervals from the surface soils (<0.1m), then at a minimum of every metre interval to a maximum depth of 0.7 metres below ground surface (m bgs). Test pits were advanced utilising an excavator and/or backhoe and soil samples were collected directly from the bucket at regular intervals from the surface soils (<0.1 m), then at a minimum of every metre interval to maximum depth of 1.4 m bgs.

[2] https://www.seed.nsw.gov.au/ accessed 12 April 2021

[3] *Frasers Property Industrial Constructions Pty Ltd Detailed Site Investigation, Aldington Road Estate 155-167, 169-181, 183-197, 199 and 201-217, Aldington Road, Kemps Creek, NSW,* dated 11 August 2021, reference: 60482/137852 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2021)

	Representative samples were collected via a gloved hand using a fresh pair of disposable nitrile gloves at each sample location and placed into laboratory supplied jars and bags. During sample collection material was inspected for any potential indicators of contamination including staining, odours or asbestos containing material (ACM). All samples were immediately placed into a chilled esky prior to delivery to the laboratory under appropriate chain of custody (COC) procedures.
Material Identification	Review of JBS&G field observations and the borehole and test pit logs has identified the in-situ fill material within the Assessment Area was generally characterised as a heterogenous dark brown – brown, clayey silt with inclusions of trace plastic. No odours or discolouration/staining were observed throughout the fill material, including odours or features (i.e. jarosite, sulfidic ores, shell material, and/or staining) which may indicate the presence of ASS.
Visible Signs of Contamination?	No
Visible ACM?	Yes
Visible Putrescible Material?	No
Number of Samples and Sample IDs	The JBS&G sampling activities included a total of 17 primary soil samples from 15 sampling locations. Samples were submitted for laboratory analysis for chemical contaminants of potential concern (COPC) and asbestos. The analytical summary tables are presented as **Tables A**, and **B** (**Attachment 3**), with laboratory reports provided in **Attachment 4.**
Rational for Sampling Design	JBS&G undertook sampling in general accordance with the guidance for systematic grid-based sampling provided in EPA (2022[4]) *Sampling design part 1 – application, Contaminated Land Guidelines*, whereby a minimum of 8 approximately evenly spaced sampling locations are required to characterise an area of up to 0.2 ha. Samples were selected for analysis based on the anticipated depth of material potentially requiring off-site disposal, and where distinct lithologies were encountered. A total of 9 samples were analysed for chemical COPCs from the Assessment Area, and fourteen of the locations were quantified for asbestos. This is considered appropriate to characterise the fill material consistent with the requirements of EPA (2022), and provides a basis for assessment of materials in relation to EPA (2014[5]). On this basis, the samples collected herein are considered to have appropriately characterised the material such that decisions may be made regarding a waste classification as per requirements.
QA/QC Assessment	A trip spike and blank were sent with the samples to ensure there was no loss of volatile organic compounds (VOCs) during transport, where analysis for VOCs was undertaken. The field sampling and handling procedures produced quality assurance (QA) and quality control (QC) results which indicate that the collected soil analytical data are of an acceptable quality and suitable for use as part of the waste classification assessment. The NATA certified laboratory results sheets indicate that the project laboratory was generally achieving levels of performance within its recommended control limits during the period when the samples for this project were analysed.

[4] *Contaminated Land Guidelines, Sampling design part 1 – application*, NSW Environment Protection Authority, August 2022 (EPA 2022)

[5] *Waste Classification Guidelines Part 1: Classifying Waste,* NSW EPA (2014).

	On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality in order to achieve the objectives of the current assessment.
Toxicity Characteristic Leaching Procedure (TCLP) Samples	No
Sampling Date	JBS&G sampling event(s): 8 April 2021, 9 April 2021, 20 March 2024

5. Laboratory Analysis

Laboratory	Primary Laboratory: Eurofins
All laboratory methods NATA certified?	Yes
Contaminants of Concern	Total recoverable hydrocarbons (TRH), Total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene and xylenes (BTEX), benzo(a)pyrene, polycyclic aromatic hydrocarbons (PAH), Herbicides & Fungicides, heavy metals (As, Cd, Cr, Pb, Hg, Ni), Asbestos and phenols.
Laboratory Report Attached?	Yes (**Attachment 4**)
Additional Data Sources?	No
Is the material covered by a General Immobilisation Approval?	No
Discussion of Results	A review of the laboratory analysis results has identified that contaminant concentrations in the Assessment Area were reported as consistently low, and below the contaminant threshold (CT1) for general solid waste (GSW) in the *NSW EPA (2014) Waste Classification Guidelines – Part 1: Classifying Waste*. However, asbestos in the form of chrysotile AF was identified by the laboratory in sample 1E-19. Detailed laboratory results are provided in **Attachment 4**.

6. Waste Classification

Waste Classification	**Special Waste (Asbestos) mixed with General Solid Waste (GSW) non-putrescible** This waste classification only applies to the materials represented by validation sample 1E-19.
Does 'Special Waste' apply?	Yes – Asbestos Waste The waste classification described herein only applies to asbestos impacted materials observed at 1E-19.
Is the Material Classified as 'Hazardous Waste'?	No
Classification Comments	Should the material requiring off-site disposal be inconsistent with those described herein, additional assessment may be required, and JBS&G should be contacted to reassess the material prior to disposal. Additionally, it is recommended that JBS&G be present onsite during removal and disposal of asbestos contaminated fill materials described herein to ensure appropriate removal of impacted materials.
Disposal Comments	Waste must be transported by an appropriately licensed transporter and disposed to a facility that is licensed to receive that class of waste. Waste must be managed in accordance with relevant guidelines and regulations during loading, transport, unloading and disposal.

Notes

1. The estimated volume of waste is an indicative estimate only based on either client-supplied data or field observations including estimated elevation, extent and/or depths. For material characterised in-situ, a bulking factor may be applied.
2. Material observations including those relating to visible ACM and putrescible materials were made prior to material leaving the source site.
3. Wastes that are generally classified as putrescible include: green waste, agricultural, forestry and crop materials, and natural fibrous organic and vegetative materials, as per EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
4. Materials have been classified in accordance with EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
5. The disposal Facility or Facilities must be appropriately licensed under Schedule 1, Section 39; "Waste Disposal (Application to Land)", of the *Protection of the Environment Operations (POEO) Act 1997*. Disposal of 'Asbestos Waste', as defined under the Act and associated Waste Guidelines, is required to be managed in accordance with the *Protection of the Environment Operations (Waste) Regulation 2014* in terms of loading, transport, unloading and disposal. The *POEO Act 1997* states that if waste is transported to a facility not lawfully authorised as a waste facility for that waste, the owner, transporter and receiver of the waste are each guilty of an offence. The owner of waste includes, in relation to waste that has been transported, the person who was the owner of the waste immediately before it was transported. There are special considerations for transport and management including disposal of asbestos waste under the POEO (Waste) Regulation, including tracking and reporting of asbestos waste using NSW EPA Integrated Waste Tracking Solution (IWTS).

Should you require clarification, please contact Jordan Rides on 02 8245 0300 or by email jrides@jbsg.com.au.

Attachment 1 – Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties. The report has been prepared specifically for the client for the purposes of the commission, and no warranties, express or implied, are offered to any third parties and no liability will be accepted for use or interpretation of this report by any third party.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose. This report should not be amended in any way without prior approval by JBS&G, or reproduced other than in full including all attachments as originally provided to the client by JBS&G.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements or agreed scope of work.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 6:38 PM
Eurofins reference	786604

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.5 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Sample ID BH273 0-0.2 (bag) received as BH293 0-0.2, TP400 0-0.3 received as TP400 0-0.2 (bag) & TP400 0-0.1 (jar), labelled as per COC. TP401 0-0.3, TS/TB, TP212 1-1.1 not received, analysis cancelled. BH439_0.0-0.15 and BH439_0.2-0.4, jars not received, analysis cancelled. Sample ID TP200_0.4-0.5 (jar), TP213_0.3-0.4(jar), BH221_0.3-0.4-0.5 (jar), TP200_0.0-0.4AQ (bag), TP213_0.0-0.1 (jar+bag), TP214_0.0-0.2 (bag), BH221_0.0-0.1 (jar+bag), TP463_0.8-1.8 (bag), TP463_2.8-3.8AQ (bag) & TP464_0.0-1.0AQ (bag) received, not on COC, logged on hold. Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Ryan Lill
Report	786604-AID
Project Name	KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 12, 2021
Date Reported	Apr 21, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Ap17180 to Ap17187, Ap17190,Ap17191, Ap17203 to Ap20357, Ap20360 o Ap20370: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N/A	Not applicable

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Organochlorine Pesticides	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	Apr 17, 2021	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Acid Herbicides	Melbourne	Apr 16, 2021	14 Days
- Method: LTM-ORG-2180 Phenoxy Acid Herbicides			
% Clay	Brisbane	Apr 19, 2021	14 Days
- Method: LTM-GEN-7040			
pH (1:5 Aqueous extract at 25°C as rec.)	Sydney	Apr 17, 2021	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
% Moisture	Sydney	Apr 14, 2021	14 Days
- Method: LTM-GEN-7080 Moisture			
Conductivity (1:5 aqueous extract at 25°C as rec.)	Sydney	Apr 17, 2021	7 Days
- Method: LTM-INO-4030 Conductivity			
Cation Exchange Capacity	Melbourne	Apr 20, 2021	180 Days
- Method: LTM-MET-3060 Cation Exchange Capacity by bases & Exchangeable Sodium Percentage			
Polycyclic Aromatic Hydrocarbons	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Metals M8	Sydney	Apr 17, 2021	180 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	ADDITIONAL KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	3 Day
Date/Time received	Apr 21, 2021 6:05 PM
Eurofins reference	789056

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.5 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Attention:	Ryan Lill
Report	789056-AID
Project Name	ADDITIONAL KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 21, 2021
Date Reported	Apr 26, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Project Name ADDITIONAL KEMPS CREEK DSI
Project ID 60482
Date Sampled Apr 09, 2021
Report 789056-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
TP458_0-0.9	21-Ap35665	Apr 09, 2021	Approximate Sample 403g Sample consisted of: Brown coarse-grained soil, bitumen, plaster and rocks	No asbestos detected at the reporting limit of 0.001% w/w. Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Sample received was less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Samuel Knott
Project name:	ALDINGTON-02
Project ID:	66105
Turnaround time:	3 Day
Date/Time received	Mar 20, 2024 6:38 PM
Eurofins reference	1080081

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Andrew Black on phone : (+61) 2 9900 8490 or by email: AndrewBlack@eurofins.com

Results will be delivered electronically via email to Samuel Knott - sknott@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Samuel Knott
Report	1080081-AID
Project Name	ALDINGTON-02
Project ID	66105
Received Date	Mar 20, 2024
Date Reported	Mar 25, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

1E - 12	24-Ma0049144	Mar 20, 2024	Approximate Sample 617g Sample consisted of: Red-brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 13	24-Ma0049145	Mar 20, 2024	Approximate Sample 605g Sample consisted of: Red-brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 14	24-Ma0049146	Mar 20, 2024	Approximate Sample 874g Sample consisted of: Brown fine-grained sandy soil, charcoal, corroded metal, bitumen like material, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 15	24-Ma0049147	Mar 20, 2024	Approximate Sample 684g Sample consisted of: Brown fine-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 16	24-Ma0049148	Mar 20, 2024	Approximate Sample 368g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 17	24-Ma0049149	Mar 20, 2024	Approximate Sample 534g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 18	24-Ma0049150	Mar 20, 2024	Approximate Sample 803g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 19	24-Ma0049151	Mar 20, 2024	Approximate Sample 640g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	AF: Chrysotile asbestos detected in compressed fibre cement material. Approximate raw weight of AF = 0.045g* Estimated asbestos content in AF = 0.0045g* Total estimated asbestos concentration in AF = 0.00070% w/w* No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1E - 20	24-Ma0049152	Mar 20, 2024	Approximate Sample 399g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	ACM: Chrysotile and amosite asbestos detected in compressed fibre cement material. Approximate raw weight of ACM = 4.3g Total estimated asbestos content in ACM = 0.86g* Total estimated asbestos concentration in ACM = 0.22% w/w* Organic fibre detected. No trace asbestos detected.
1E - 21	24-Ma0049153	Mar 20, 2024	Approximate Sample 533g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Test Counts						21

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ma0049140, 24-Ma0049143, 24-Ma0049148, 24-Ma0049152: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 6:38 PM
Eurofins reference	786604

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.5 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Sample ID BH273 0-0.2 (bag) received as BH293 0-0.2, TP400 0-0.3 received as TP400 0-0.2 (bag) & TP400 0-0.1 (jar), labelled as per COC. TP401 0-0.3, TS/TB, TP212 1-1.1 not received, analysis cancelled. BH439_0.0-0.15 and BH439_0.2-0.4, jars not received, analysis cancelled. Sample ID TP200_0.4-0.5 (jar), TP213_0.3-0.4(jar), BH221_0.3-0.4-0.5 (jar), TP200_0.0-0.4AQ (bag), TP213_0.0-0.1 (jar+bag), TP214_0.0-0.2 (bag), BH221_0.0-0.1 (jar+bag), TP463_0.8-1.8 (bag), TP463_2.8-3.8AQ (bag) & TP464_0.0-1.0AQ (bag) received, not on COC, logged on hold. Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Ryan Lill
Report	786604-AID
Project Name	KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 12, 2021
Date Reported	Apr 21, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Ap17180 to Ap17187, Ap17190,Ap17191, Ap17203 to Ap20357, Ap20360 o Ap20370: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N/A	Not applicable

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Organochlorine Pesticides	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	Apr 17, 2021	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Acid Herbicides	Melbourne	Apr 16, 2021	14 Days
- Method: LTM-ORG-2180 Phenoxy Acid Herbicides			
% Clay	Brisbane	Apr 19, 2021	14 Days
- Method: LTM-GEN-7040			
pH (1:5 Aqueous extract at 25°C as rec.)	Sydney	Apr 17, 2021	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
% Moisture	Sydney	Apr 14, 2021	14 Days
- Method: LTM-GEN-7080 Moisture			
Conductivity (1:5 aqueous extract at 25°C as rec.)	Sydney	Apr 17, 2021	7 Days
- Method: LTM-INO-4030 Conductivity			
Cation Exchange Capacity	Melbourne	Apr 20, 2021	180 Days
- Method: LTM-MET-3060 Cation Exchange Capacity by bases & Exchangeable Sodium Percentage			
Polycyclic Aromatic Hydrocarbons	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Metals M8	Sydney	Apr 17, 2021	180 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
BTEX	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Phenols (Halogenated)	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Phenols (non-Halogenated)	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.5 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Attention:	Ryan Lill
Report	789056-AID
Project Name	ADDITIONAL KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 21, 2021
Date Reported	Apr 26, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Project Name ADDITIONAL KEMPS CREEK DSI
Project ID 60482
Date Sampled Apr 09, 2021
Report 789056-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
TP458_0-0.9	21-Ap35665	Apr 09, 2021	Approximate Sample 403g Sample consisted of: Brown coarse-grained soil, bitumen, plaster and rocks	No asbestos detected at the reporting limit of 0.001% w/w. Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Asbestos - LTM-ASB-8020	Sydney	Apr 21, 2021	Indefinite

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Sample received was less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Attention:	Samuel Knott
Report	1080081-AID
Project Name	ALDINGTON-02
Project ID	66105
Received Date	Mar 20, 2024
Date Reported	Mar 25, 2024

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ALDINGTON-02

Date Sampled Mar 20, 2024
Report 1080081-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1E - 1	24-Ma0049133	Mar 20, 2024	Approximate Sample 635g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 2	24-Ma0049134	Mar 20, 2024	Approximate Sample 632g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 3	24-Ma0049135	Mar 20, 2024	Approximate Sample 706g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 4	24-Ma0049136	Mar 20, 2024	Approximate Sample 638g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 5	24-Ma0049137	Mar 20, 2024	Approximate Sample 580g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 6	24-Ma0049138	Mar 20, 2024	Approximate Sample 693g Sample consisted of: Brown coarse-grained clayey sandy soil, cement, bitumen like material, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 7	24-Ma0049139	Mar 20, 2024	Approximate Sample 627g Sample consisted of: Brown coarse-grained clayey sandy soil, cement, bitumen like material, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 8	24-Ma0049140	Mar 20, 2024	Approximate Sample 466g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1E - 9	24-Ma0049141	Mar 20, 2024	Approximate Sample 603g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 10	24-Ma0049142	Mar 20, 2024	Approximate Sample 627g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 11	24-Ma0049143	Mar 20, 2024	Approximate Sample 477g Sample consisted of: Brown fine-grained clayey sandy soil, charcoal, organic debris, and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 12	24-Ma0049144	Mar 20, 2024	Approximate Sample 617g Sample consisted of: Red-brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 13	24-Ma0049145	Mar 20, 2024	Approximate Sample 605g Sample consisted of: Red-brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 14	24-Ma0049146	Mar 20, 2024	Approximate Sample 874g Sample consisted of: Brown fine-grained sandy soil, charcoal, corroded metal, bitumen like material, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 15	24-Ma0049147	Mar 20, 2024	Approximate Sample 684g Sample consisted of: Brown fine-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 16	24-Ma0049148	Mar 20, 2024	Approximate Sample 368g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 17	24-Ma0049149	Mar 20, 2024	Approximate Sample 534g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 18	24-Ma0049150	Mar 20, 2024	Approximate Sample 803g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
1E - 19	24-Ma0049151	Mar 20, 2024	Approximate Sample 640g Sample consisted of: Brown coarse-grained clayey sandy soil, organic debris and rocks	AF: Chrysotile asbestos detected in compressed fibre cement material. Approximate raw weight of AF = 0.045g* Estimated asbestos content in AF = 0.0045g* Total estimated asbestos concentration in AF = 0.00070% w/w* No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
1E - 20	24-Ma0049152	Mar 20, 2024	Approximate Sample 399g Sample consisted of: Brown fine-grained clayey sandy soil, organic debris and rocks	ACM: Chrysotile and amosite asbestos detected in compressed fibre cement material. Approximate raw weight of ACM = 4.3g Total estimated asbestos content in ACM = 0.86g* Total estimated asbestos concentration in ACM = 0.22% w/w* Organic fibre detected. No trace asbestos detected.
1E - 21	24-Ma0049153	Mar 20, 2024	Approximate Sample 533g Sample consisted of: Brown coarse-grained clayey sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with the colour **blue** indicates data provided by customer that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to the most recent version of the 'Sample Preservation and Container Guide' for holding times (QS3001).
If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported. Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w:	Percentage weight-for-weight basis, e.g. of asbestos in asbestos-containing finds in soil samples (**% w/w**)
F/fld	Airborne fibre filter loading as Fibres (**N**) per Fields counted (**n**)
F/mL	Airborne fibre reported concentration as Fibres per millilitre of air drawn over the sampler membrane (**C**)
g, kg	Mass, e.g. of whole sample (**M**) or asbestos-containing find within the sample (**m**)
g/kg	Concentration in grams per kilogram
L, mL	Volume, e.g. of air as measured in AFM (**V** = **r** x **t**)
L/min	Airborne fibre sampling Flowrate as litres per minute of air drawn over the sampler membrane (**r**)
min	Time (**t**), e.g. of air sample collection period

Calculations

Airborne Fibre Concentration: $C = \left(\frac{A}{a}\right) \times \left(\frac{N}{n}\right) \times \left(\frac{1}{r}\right) \times \left(\frac{1}{t}\right) = K \times \left(\frac{N}{n}\right) \times \left(\frac{1}{V}\right)$

Asbestos Content (as asbestos): $\%\, w/w = \frac{(m \times P_A)}{M}$

Weighted Average (of asbestos): $\%_{WA} = \sum \frac{(m \times P_A)_x}{x}$

Terms

%asbestos	Estimated percentage of asbestos in a given matrix may be derived from knowledge or experience of the material, informed by HSG264 *Appendix 2*, else assumed to be 15% in accordance with WA DOH *Appendix 2* (**P_A**). This estimate is not NATA-accredited.
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded (non-friable) condition. For the purposes of the NEPM and WA DOH, ACM corresponds to material larger than 7 mm x 7 mm.
AF	Asbestos Fines. Asbestos contamination within a soil sample, as defined by WA DOH. Includes loose fibre bundles and small pieces of friable and non-friable material such as asbestos cement fragments mixed with soil. Considered under the NEPM as equivalent to “non-bonded / friable”.
AFM	Airborne Fibre Monitoring, e.g., by the MFM.
Amosite	Amosite Asbestos Detected. Amosite may also refer to Fibrous Grunerite or Brown Asbestos. Identified in accordance with AS 4964-2004.
AS	Australian Standard.
Asbestos Content (as asbestos)	Total %w/w asbestos content in asbestos-containing finds in a soil sample (**% w/w**).
Chrysotile	Chrysotile Asbestos Detected. Chrysotile may also refer to Fibrous Serpentine or White Asbestos. Identified in accordance with AS 4964-2004.
COC	Chain of Custody.
Crocidolite	Crocidolite Asbestos Detected. Crocidolite may also refer to Fibrous Riebeckite or Blue Asbestos. Identified in accordance with AS 4964-2004.
Dry	Sample is dried by heating prior to analysis.
DS	Dispersion Staining. Technique required for Unequivocal Identification of asbestos fibres by PLM.
FA	Fibrous Asbestos. Asbestos containing material that is wholly or in part friable, including materials with higher asbestos content with a propensity to become friable with handling, and any material that was previously non-friable and in a severely degraded condition. For the purposes of the NEPM and WA DOH, FA generally corresponds to material larger than 7 mm x 7 mm, although FA may be more difficult to visibly distinguish and may be assessed as AF.
Fibre Count	Total of all fibres (whether asbestos or not) meeting the counting criteria set out in the NOHSC:3003
Fibre ID	Fibre Identification. Unequivocal identification of asbestos fibres according to AS 4964-2004. Includes Chrysotile, Amosite (Grunerite) or Crocidolite asbestos.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
HSG248	UK HSE HSG248, *Asbestos: The Analysts Guide*, 2nd Edition (2021).
HSG264	UK HSE HSG264, *Asbestos: The Survey Guide* (2012).
ISO (also ISO/IEC)	International Organization for Standardization / International Electrotechnical Commission.
K Factor	Microscope constant (**K**) as derived from the effective filter area of the given AFM membrane used for collecting the sample (**A**) and the projected eyepiece graticule area of the specific microscope used for the analysis (**a**).
LOR	Limit of Reporting.
MFM (also NOHSC:3003)	Membrane Filter Method. As described by the Australian Government National Occupational Health and Safety Commission, *Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres*, 2nd Edition [NOHSC:3003(2005)].
NEPM (also ASC NEPM)	National Environment Protection (Assessment of Site Contamination) Measure, (2013, as amended).
Organic	Organic Fibres Detected. Organic may refer to Natural or Man-Made Polymeric Fibres. Identified in accordance with AS 4964-2004.
PCM	Phase Contrast Microscopy. As used for Fibre Counting according to the MFM.
PLM	Polarised Light Microscopy. As used for Fibre Identification and Trace Analysis according to AS 4964-2004.
Sampling	Unless otherwise stated Eurofins are not responsible for sampling equipment or the sampling process.
SMF	Synthetic Mineral Fibre Detected. SMF may also refer to Man Made Vitreous Fibres. Identified in accordance with AS 4964-2004.
SRA	Sample Receipt Advice.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres (particularly asbestos) in a given sample matrix.
UK HSE HSG	United Kingdom, Health and Safety Executive, Health and Safety Guidance, publication.
UMF	Unidentified Mineral Fibre Detected. Fibrous minerals that are detected but have not been unequivocally identified by PLM with DS according the AS 4964-2004. May include (but not limited to) Actinolite, Anthophyllite or Tremolite asbestos.
WA DOH	Reference document for the NEPM. Government of Western Australia, *Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia* (updated 2021), including Appendix Four: *Laboratory analysis*
Weighted Average	Combined average %w/w asbestos content of all asbestos-containing finds in the given aliquot or total soil sample (**$\%_{WA}$**).

Comments

24-Ma0049140, 24-Ma0049143, 24-Ma0049148, 24-Ma0049152: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Asbestos Counter/Identifier:

Sayeed Abu	Senior Analyst-Asbestos

Authorised by:

Chamath JHM Annakkage	Senior Analyst-Asbestos

L005 - In-Situ Waste Classification Asbestos Impacted Material UF1_01

2 April 2024

Ahmad Ghalayini
Frasers Property Industrial Pty Ltd

In-Situ Waste Classification, Asbestos Impacted Material 1B and 6C, Edge South Development, Aldington Road, Kemps Creek (Rev A)

Dear Ahmad,

JBS&G Australia Pty Ltd (JBS&G) was engaged by Frasers Property Industrial Pty Ltd (FPI, the client) to provide a waste classification for off-site disposal of material associated with the excavation and removal of asbestos fines (AF) and fibrous asbestos (FA) impacted fill material within portions of the Edge South Development, 199 Aldington Road, Kemps Creek, NSW (the site). Validation samples were collected across the remedial extent of areas 1B and 6C (as UF1), with asbestos detected in the form of AF/FA at sample location UF1_01 and 6C_07. The waste classification documented herein, was prepared using historical data collected from the site as part of assessment works undertaken during April 2021, as documented in JBS&G (2021[1]). The location of the site and material (to which this waste classification pertains) are shown on **Figures 1** and **2** respectively (**Attachment 2**).

Details of the site, material encountered, and waste classification are provided below. The limitations included in **Attachment 1** apply to the advice provided herein.

1. Site and Assessment Area Legal Identifiers and Owner

Site Lot/DP and Address	Lot 33/ DP 258949 155 to 167 Aldington Road, Kemps Creek, NSW, 2178 Lot 28/ DP 255560 169 to 181 Aldington Road, Kemps Creek, NSW, 2178 Lot 27/ DP 255560 183 to 197 Aldington Road, Kemps Creek, NSW, 2178 Lot 26/ DP 255560 199 Aldington Road, Kemps Creek, NSW, 2178 Lot 25/ DP 255560 201 to 217 Aldington Road, Kemps Creek, NSW, 2178 Lot 24/DP 255560 219 to 233 Aldington Road, Kemps Creek, NSW 2178 Lot 10/DP 253503 235 to 251 Aldington Road, Kemps Creek, NSW 2178
Site (waste) Occupant	Frasers Property Industrial Pty Ltd
Local Government Authority	Penrith City Council
Site Area (total)	63.6
Investigation Area	Areas 1B and 6C of the site as shown in **Figure 2**, where asbestos has been identified.

[1] *Frasers Property Industrial Constructions Pty Ltd Detailed Site Investigation, Aldington Road Estate 155-167, 169-181, 183-197, 199 and 201-217, Aldington Road, Kemps Creek, NSW,* dated 11 August 2021, reference: 60482/137852 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2021)

2. Consultant Preparing Waste Classification

Name	JBS&G Australia Pty Ltd
Australian Business Number (ABN)	62 100 220 479
Address	Level 1, 50 Margaret Street, Sydney, NSW 2000.
Person(s) Providing Waste Classification	Sam Knott

3. Desktop Review

Site Setting	The portion of the site in which the materials are located was observed to comprise residential and shed structures associated with the agricultural use of the site. The site and surrounding areas largely comprise a mixture of agricultural and rural residential properties, as well as a construction site opposite 219-233 Aldington Road.
Production History of Materials	Materials the subject of this waste classification comprise in-situ fill (of unknown origin) which is to be excavated to remove identified asbestos fines, as shown on **Figure 2** (**Attachment 2**). This advice specifically relates to material within the 1B and 6C remedial extents identified to have AF/FA impacts, remedial areas are marked on **Figure 2**.
Acid Sulfate Soil (ASS)	Review of data using the SEED[2] tool, indicates the area occupied by the site is within an area not assessed for the presence of Acid Sulfate Soils (ASS). Such sites are identified by default, as areas where land management activities are not likely to be affected by ASS materials.
Potential Contaminating Activities?	Potentially contaminating activities identified during the site assessment include the previous importation and placement of fill materials across the site to establish current site levels, (poor) demolition of previous structures on site, potential impacts associated with former agricultural land uses (i.e. residences, sheds and roads), and stockpiling of wastes associated with residences and agricultural practices.

4. Material Characterisation and Sampling Rationale

Area/GPS Coordinates	See **Figure 1** and **2** (**Attachment 2**) for approximate location of the Assessment Area and sampling locations.
Estimated volume (m3)	Approximately 30 m^3 represented by UF1_01 and 6C_07 within the 1B and 6C areas, as shown in **Figure 2**.
Sampling Method	A total of 438 sample locations were completed as part of assessment works undertaken during April 2021, as documented in JBS&G (2021[3]). Boreholes were manually advanced via the use of hand tools (hand auger/shovel) and samples were collected at regular intervals from the surface soils (<0.1 m) to a maximum depth of 1.2 m bgs. Test pits were advanced utilising an excavator and/or backhoe and soil samples were collected directly from the bucket at regular intervals from the surface soils (<0.1 m), 0.3 m, 0.5 m then at every metre interval to maximum depth of 4.7 m bgs Representative samples were collected via a gloved hand using a fresh pair of disposable nitrile gloves at each sample location and placed into laboratory supplied jars and bags. During sample collection material was inspected for any potential indicators of contamination including staining, odours or asbestos containing material (ACM).

[2] https://www.seed.nsw.gov.au/ accessed 12 April 2021

[3] *Frasers Property Industrial Constructions Pty Ltd Detailed Site Investigation, Aldington Road Estate 155-167, 169-181, 183-197, 199 and 201-217, Aldington Road, Kemps Creek, NSW,* dated 11 August 2021, reference: 60482/137852 (Rev 2), JBS&G Australia Pty Ltd (JBS&G 2021)

	All samples were immediately placed into a chilled esky prior to delivery to the laboratory under appropriate chain of custody (COC) procedures.
Material Identification	Review of JBS&G field observations and the borehole and test pit logs has identified the site contains fill of varying description at a number of locations. The material classified in this assessment consists of the following: • Area 1B - Gravelly clayey silt, brown, dry, heterogeneous, low plasticity, firm with little (10-20%) inclusions of concrete, tile and plastic. • Area 6C - Clayey silt/silty clay (Reworked Natural), brown, damp, heterogeneous, low plasticity, soft with trace inclusions of rootlets. No odours or discolouration/staining were observed throughout the fill material, including odours or features (i.e. jarosite, sulfidic ores, shell material, and/or staining) which may indicate the presence of ASS.
Visible Signs of Contamination?	No
Visible ACM?	Yes
Visible Putrescible Material?	No
Number of Samples and Sample IDs	The JBS&G sampling activities included a total of 324 primary soil samples from 438 sampling locations across the site. Samples were submitted for laboratory analysis for chemical contaminants of potential concern (COPC) and asbestos. The analytical summary tables are presented as **Tables A**, and **B** (**Attachment 3**), with laboratory reports provided in **Attachment 4.**
Rational for Sampling Design	JBS&G undertook sampling in general accordance with the guidance for systematic grid-based sampling provided in EPA (2022[4]) *Sampling design part 1 – application, Contaminated Land Guidelines*, the site was stratified in accordance with the guidelines, generally samples were grid based with targeted locations completed in areas of concern. Samples were selected for analysis based on the anticipated depth of material potentially requiring off-site disposal, and where distinct lithologies were encountered. On this basis, the samples collected herein are considered to have appropriately characterised the material such that decisions may be made regarding a waste classification as per requirements.
QA/QC Assessment	A trip spike and blank were sent with the samples to ensure there was no loss of volatile organic compounds (VOCs) during transport, where analysis for VOCs was undertaken. The field sampling and handling procedures produced quality assurance (QA) and quality control (QC) results which indicate that the collected soil analytical data are of an acceptable quality and suitable for use as part of the waste classification assessment. The NATA certified laboratory results sheets indicate that the project laboratory was generally achieving levels of performance within its recommended control limits during the period when the samples for this project were analysed. On the basis of the results of the field and laboratory QA/QC program, the soil data is of an acceptable quality in order to achieve the objectives of the current assessment.
Toxicity Characteristic Leaching Procedure (TCLP) Samples	No

[4] *Contaminated Land Guidelines, Sampling design part 1 – application*, NSW Environment Protection Authority, August 2022 (EPA 2022)

Sampling Date	JBS&G sampling event(s): 8, 9, 12, 13, 14 and 15 April 2021; and 21 and 22 March 2024

5. Laboratory Analysis

Laboratory	Primary Laboratory: Eurofins Secondary Laboratory: Envirolab
All laboratory methods NATA certified?	Yes
Contaminants of Concern	Total recoverable hydrocarbons (TRH), Total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene and xylenes (BTEX), benzo(a)pyrene, polycyclic aromatic hydrocarbons (PAH), Herbicides & Fungicides, heavy metals (As, Cd, Cr, Pb, Hg, Ni), Asbestos and phenols.
Laboratory Report Attached?	Yes (**Attachment 4**)
Additional Data Sources?	95% UCL calculations (**Attachment 6**)
Is the material covered by a General Immobilisation Approval?	No
Discussion of Results	A review of the laboratory analysis results has identified that contaminant concentrations across the site were reported as consistently low (except B(a)P, see below), and below the contaminant threshold (CT1) for general solid waste (GSW) in the *NSW EPA (2014) Waste Classification Guidelines – Part 1: Classifying Waste*. However, asbestos in the form of chrysotile AF/FA was identified by the laboratory in sample UF1_01 and 6C_07. It is noted that Nickel concentrations exceeded the CT1 criteria of 40 mg/kg in 3 samples, not in excess of 250% above the CT1 criteria. The 95% UCL assessment demonstrated that Nickel results were below the CT1 criteria at 14.98 mg/kg (95% UCL). Further, one sample reported Chromium at 110 mg/kg in exceedance of the CT1 criteria (100 mg/kg). The 95% UCL assessment of Chromium results showed that the results are below the CT1 criteria (23.36 mg/kg). It is noted that in 6C a benzo(a)pyrene result of 17 mg/kg was reported as part of JBS&G (2021) at TP395_0.3-0.4, and a result of 210 mg/kg at TP398 (subject to a separate waste classification and removed). This material type was reported as different from the remainder of the 6C area (Sandy Gravelly Silt, dry, heterogeneous, low plasticity, soft with inclusions of concrete blocks). As such, this material type is not included as part of this classification. Detailed laboratory results are provided in **Attachment 4,** 95% UCL concentrations in **Attachment 6**.

6. Waste Classification

Waste Classification	**Special Waste (Asbestos) mixed with General Solid Waste (GSW) non-putrescible** This waste classification only applies to the materials represented by validation sample UF1_01 and 6C_07.
Does 'Special Waste' apply?	Yes – Asbestos Waste The waste classification described herein only applies to asbestos impacted materials observed at UF1_01 and 6C_07.

Is the Material Classified as 'Hazardous Waste'?	No
Classification Comments	Should the material requiring off-site disposal be inconsistent with those described herein, additional assessment may be required, and JBS&G should be contacted to reassess the material prior to disposal. Additionally, it is recommended that JBS&G be present onsite during removal and disposal of asbestos contaminated fill materials described herein to ensure appropriate removal of impacted materials.
Disposal Comments	Waste must be transported by an appropriately licensed transporter and disposed to a facility that is licensed to receive that class of waste. Waste must be managed in accordance with relevant guidelines and regulations during loading, transport, unloading and disposal.

Notes

1. The estimated volume of waste is an indicative estimate only based on either client-supplied data or field observations including estimated elevation, extent and/or depths. For material characterised in-situ, a bulking factor may be applied.
2. Material observations including those relating to visible ACM and putrescible materials were made prior to material leaving the source site.
3. Wastes that are generally classified as putrescible include: green waste, agricultural, forestry and crop materials, and natural fibrous organic and vegetative materials, as per EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
4. Materials have been classified in accordance with EPA (2014) *Waste Classification Guidelines, Part 1: Classifying Waste*.
5. The disposal Facility or Facilities must be appropriately licensed under Schedule 1, Section 39; "Waste Disposal (Application to Land)", of the *Protection of the Environment Operations (POEO) Act 1997*. Disposal of 'Asbestos Waste', as defined under the Act and associated Waste Guidelines, is required to be managed in accordance with the *Protection of the Environment Operations (Waste) Regulation 2014* in terms of loading, transport, unloading and disposal. The *POEO Act 1997* states that if waste is transported to a facility not lawfully authorised as a waste facility for that waste, the owner, transporter and receiver of the waste are each guilty of an offence. The owner of waste includes, in relation to waste that has been transported, the person who was the owner of the waste immediately before it was transported. There are special considerations for transport and management including disposal of asbestos waste under the POEO (Waste) Regulation, including tracking and reporting of asbestos waste using NSW EPA Integrated Waste Tracking Solution (IWTS).

Attachment 1 – Limitations

This report has been prepared for use by the client who has commissioned the works in accordance with the project brief only, and has been based in part on information obtained from the client and other parties. The report has been prepared specifically for the client for the purposes of the commission, and no warranties, express or implied, are offered to any third parties and no liability will be accepted for use or interpretation of this report by any third party.

The advice herein relates only to this project and all results conclusions and recommendations made should be reviewed by a competent person with experience in environmental investigations, before being used for any other purpose. This report should not be amended in any way without prior approval by JBS&G, or reproduced other than in full including all attachments as originally provided to the client by JBS&G.

Sampling and chemical analysis of environmental media is based on appropriate guidance documents made and approved by the relevant regulatory authorities. Conclusions arising from the review and assessment of environmental data are based on the sampling and analysis considered appropriate based on the regulatory requirements or agreed scope of work.

Limited sampling and laboratory analyses were undertaken as part of the investigations undertaken, as described herein. Conditions between sampling locations and media may vary, and this should be considered when extrapolating between sampling points. Chemical analytes are based on the information detailed in the site history. Further chemicals or categories of chemicals may exist at the site, which were not identified in the site history and which may not be expected at the site.

Changes to the conditions may occur subsequent to the investigations described herein, through natural processes or through the intentional or accidental addition of contaminants. The conclusions and recommendations reached in this report are based on the information obtained at the time of the investigations.

This report does not provide a complete assessment of the environmental status of the site, and it is limited to the scope defined herein. Should information become available regarding conditions at the site including previously unknown sources of contamination, JBS&G reserves the right to review the report in the context of the additional information.

Env Stds Comments
#1:Trigger value adopted from Chromium VI
#2:Approximate range of petroleum hydrocarbon fractions: petrol C6–C9, kerosene C10–C18, diesel C12–C18, and lubricating oils above C18. Refer to NSW Waste Criteria Nov 2014 p.12 footnote 7
#3:There may be a need for the laboratory to concentrate the sample to achieve the TCLP limit value for benzo(a)pyrene with confidence. Refer to NSW Waste Criteria Nov 2014 p.11 footnote 2
#4:Polychlorinated biphenyls must be managed in accordance with the EPA's polychlorinated biphenyl (PCB) chemical control order 1997. Refer to NSW Waste Criteria Nov 2014 p.12 footnote 8
#5:Refer to NSW Waste Criteria Nov 2014 p.17 footnote 13
#6:Calculated from Hazardous Waste: Identification and Listing (USEPA 2012a). Refer to NSW Waste Criteria Nov 2014 p.16 footnote 3, 4
#7:Refer to NSW Waste Criteria Nov 2014 p.17 footnote 12, EPA Chemical Control Order 1997, clause 4.13

Data Comments
#1 AF:Chrysotile asbestos detected in compressed fibre cement fragment.Approximate raw weight of AF = 0.00030g*Estimated asbestos content in AF = 0.000060g*Total estimated asbestos concentration in AF = 0.0000078% w/w*No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.
#2 ACM:Chrysotile asbestos detected in fibre cement fragments.Approximate raw weight of ACM = 4.8gTotal estimated asbestos content in ACM = 0.24g*Total estimated asbestos concentration in ACM = 0.036% w/w*Organic fibre detected.No trace asbestos detected.
#3 AF:Chrysotile asbestos detected in compressed fibre cement fragment.No asbestos detected at the reporting limit of 0.001% w/w.*
#4 No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.No trace asbestos detected.
#5 No asbestos detected at the reporting limit of 0.001% w/w.Organic fibre detected.No trace asbestos detected.
#6 No asbestos detected at the reporting limit of 0.01% w/w.Organic fibre detected.No trace asbestos detected.
#7 ACM:Chrysotile asbestos detected in fibre cement fragments.
#8 No respirable fibres detected.
#9 Chrysotile asbestos detected.
#10 Organic fibres detected.
#11 60x40x5
#12 Nil

Env Stds Comments
#1:Trigger value adopted from Chromium VI
#2:Approximate range of petroleum hydrocarbon fractions: petrol C6–C9, kerosene C10–C18, diesel C12–C18, and lubricating oils above C18. Refer to NSW W
#3:There may be a need for the laboratory to concentrate the sample to achieve the TCLP limit value for benzo(a)pyrene with confidence. Refer to NSW Waste
#4:Polychlorinated biphenyls must be managed in accordance with the EPA's polychlorinated biphenyl (PCB) chemical control order 1997. Refer to NSW Waste
#5:Refer to NSW Waste Criteria Nov 2014 p.17 footnote 13
#6:Calculated from Hazardous Waste: Identification and Listing (USEPA 2012a). Refer to NSW Waste Criteria Nov 2014 p.16 footnote 3, 4
#7:Refer to NSW Waste Criteria Nov 2014 p.17 footnote 12, EPA Chemical Control Order 1997, clause 4.13

Data Comments
#1 AF:Chrysotile asbestos detected in compressed fibre cement fragment.Approximate raw weight of AF = 0.00030g*Estimated asbestos content in AF = 0.00
#2 ACM:Chrysotile asbestos detected in fibre cement fragments.Approximate raw weight of ACM = 4.8gTotal estimated asbestos content in ACM = 0.24g*Tot
#3 AF:Chrysotile asbestos detected in compressed fibre cement fragment.No asbestos detected at the reporting limit of 0.001% w/w.*
#4 No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.No trace asbestos detected.
#5 No asbestos detected at the reporting limit of 0.001% w/w.Organic fibre detected.No trace asbestos detected.
#6 No asbestos detected at the reporting limit of 0.01% w/w.Organic fibre detected.No trace asbestos detected.
#7 ACM:Chrysotile asbestos detected in fibre cement fragments.
#8 No respirable fibres detected.
#9 Chrysotile asbestos detected.
#10 Organic fibres detected.
#11 60x40x5
#12 Nil

Env Stds Comments
#1:Trigger value adopted from Chromium VI
#2:Approximate range of petroleum hydrocarbon fractions: petrol C6–C9, kerosene C10–C18, diesel C12–C18, and lubricating oils above C18. Refer to NSW W
#3:There may be a need for the laboratory to concentrate the sample to achieve the TCLP limit value for benzo(a)pyrene with confidence. Refer to NSW Waste
#4:Polychlorinated biphenyls must be managed in accordance with the EPA's polychlorinated biphenyl (PCB) chemical control order 1997. Refer to NSW Waste
#5:Refer to NSW Waste Criteria Nov 2014 p.17 footnote 13
#6:Calculated from Hazardous Waste: Identification and Listing (USEPA 2012a). Refer to NSW Waste Criteria Nov 2014 p.16 footnote 3, 4
#7:Refer to NSW Waste Criteria Nov 2014 p.17 footnote 12, EPA Chemical Control Order 1997, clause 4.13

Data Comments
#1 AF:Chrysotile asbestos detected in compressed fibre cement fragment.Approximate raw weight of AF = 0.00030g*Estimated asbestos content in AF = 0.00
#2 ACM:Chrysotile asbestos detected in fibre cement fragments.Approximate raw weight of ACM = 4.8gTotal estimated asbestos content in ACM = 0.24g*Tot
#3 AF:Chrysotile asbestos detected in compressed fibre cement fragment.No asbestos detected at the reporting limit of 0.001% w/w.*
#4 No asbestos detected at the reporting limit of 0.001% w/w.*Organic fibre detected.No trace asbestos detected.
#5 No asbestos detected at the reporting limit of 0.001% w/w.Organic fibre detected.No trace asbestos detected.
#6 No asbestos detected at the reporting limit of 0.01% w/w.Organic fibre detected.No trace asbestos detected.
#7 ACM:Chrysotile asbestos detected in fibre cement fragments.
#8 No respirable fibres detected.
#9 Chrysotile asbestos detected.
#10 Organic fibres detected.

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 4:48 PM
Eurofins reference	786563

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 7.6 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Xylenes - Total*	0.003	mg/L	< 0.003
4-Bromofluorobenzene (surr.)	1	%	91

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins Suite B7 (PAH trace level)			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Apr 14, 2021	7 Days

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
ug/L: micrograms per litre
ppm: Parts per million
ppb: Parts per billion
%: Percentage
org/100mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference.
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 4:48 PM
Eurofins reference	786577

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 7.6 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Global Leader - Results you can trust

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram | **mg/L:** milligrams per litre | **ug/L:** micrograms per litre

ppm: Parts per million | **ppb:** Parts per billion | **%:** Percentage

org/100mL: Organisms per 100 millilitres | **NTU:** Nephelometric Turbidity Units | **MPN/100mL:** Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 4:48 PM
Eurofins reference	786579

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 12.7 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Sample RIN120421 received as extra and logged on hold.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Global Leader - Results you can trust

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 6:38 PM
Eurofins reference	786604

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.5 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Sample ID BH273 0-0.2 (bag) received as BH293 0-0.2, TP400 0-0.3 received as TP400 0-0.2 (bag) & TP400 0-0.1 (jar), labelled as per COC. TP401 0-0.3, TS/TB, TP212 1-1.1 not received, analysis cancelled. BH439_0.0-0.15 and BH439_0.2-0.4, jars not received, analysis cancelled. Sample ID TP200_0.4-0.5 (jar), TP213_0.3-0.4(jar), BH221_0.3-0.4-0.5 (jar), TP200_0.0-0.4AQ (bag), TP213_0.0-0.1 (jar+bag), TP214_0.0-0.2 (bag), BH221_0.0-0.1 (jar+bag), TP463_0.8-1.8 (bag), TP463_2.8-3.8AQ (bag) & TP464_0.0-1.0AQ (bag) received, not on COC, logged on hold. Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Global Leader - Results you can trust

Attention:	Ryan Lill
Report	786604-AID
Project Name	KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 12, 2021
Date Reported	Apr 21, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
5. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Ap17180 to Ap17187, Ap17190,Ap17191, Ap17203 to Ap20357, Ap20360 o Ap20370: Samples received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N/A	Not applicable

Asbestos Counter/Identifier:

Chamath JHM Annakkage	Senior Analyst-Asbestos (NSW)

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Organochlorine Pesticides	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Polychlorinated Biphenyls	Sydney	Apr 17, 2021	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Acid Herbicides	Melbourne	Apr 16, 2021	14 Days
- Method: LTM-ORG-2180 Phenoxy Acid Herbicides			
% Clay	Brisbane	Apr 19, 2021	14 Days
- Method: LTM-GEN-7040			
pH (1:5 Aqueous extract at 25°C as rec.)	Sydney	Apr 17, 2021	7 Days
- Method: LTM-GEN-7090 pH in soil by ISE			
% Moisture	Sydney	Apr 14, 2021	14 Days
- Method: LTM-GEN-7080 Moisture			
Conductivity (1:5 aqueous extract at 25°C as rec.)	Sydney	Apr 17, 2021	7 Days
- Method: LTM-INO-4030 Conductivity			
Cation Exchange Capacity	Melbourne	Apr 20, 2021	180 Days
- Method: LTM-MET-3060 Cation Exchange Capacity by bases & Exchangeable Sodium Percentage			
Polycyclic Aromatic Hydrocarbons	Sydney	Apr 17, 2021	14 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Metals M8	Sydney	Apr 17, 2021	180 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Apr 17, 2021	14 Days

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer, that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.3
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 20-130% Phenols & 50-150% PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.3 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs

Authorised by:

Ursula Long	Analytical Services Manager
Andrew Sullivan	Senior Analyst-Organic (NSW)
Charl Du Preez	Senior Analyst-Inorganic (NSW)
Emily Rosenberg	Senior Analyst-Metal (VIC)

Sample Receipt Advice

Company name:	JBS & G Australia (NSW) P/L
Contact name:	Ryan Lill
Project name:	KEMPS CREEK DSI
Project ID:	60482
Turnaround time:	5 Day
Date/Time received	Apr 12, 2021 9:02 AM
Eurofins reference	786610

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of a random sample selected from the batch as recorded by Eurofins Sample Receipt : 1.1 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples BH369 0.5-0.6 not received, switched from hold to cancelled. Samples TP495 0.0-0.4, BH351 0.1-0.2, BH335 0.0-0.2, BH348 0.0-0.2, BH350 0.0-0.2, BH335 0.0-0.2, BH386 0.0-0.1, BH344 0.0 - 0.2, BH348 0.4-0.5, BH334 0.4-0.5, BH335 0.4-0.5, BH349 0.4-0.5, BH350 0.4-0.5, BH351 0.4-0.5 and BH355 0.4-0.5 appeared multiple times on the COC, samples logged with all analysis. PFAS analysis cancelled due to incorrect containers. Samples BHX (jar), BH380 0.0-0.1 (bag), BH362 (bag) and a blank bag received not on COC, logged on hold.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Ursula Long on phone : or by email: UrsulaLong@eurofins.com

Results will be delivered electronically via email to Ryan Lill - rlill@jbsg.com.au.

Attention:	Ryan Lill
Report	786610-AID
Project Name	KEMPS CREEK DSI
Project ID	60482
Received Date	Apr 12, 2021
Date Reported	Apr 20, 2021

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Accredited for compliance with ISO/IEC 17025–Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection and proficiency testing scheme providers reports.

Project Name KEMPS CREEK DSI
Project ID 60482
Date Sampled Apr 08, 2021
Report 786610-AID

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
TP450 2-2.5	21-Ap17395	Apr 08, 2021	Approximate Sample 404g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP451 1-2	21-Ap17396	Apr 08, 2021	Approximate Sample 522g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP457 2-2.5	21-Ap17397	Apr 08, 2021	Approximate Sample 405g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP452 1-2	21-Ap17398	Apr 08, 2021	Approximate Sample 435g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP460 2-2.6	21-Ap17399	Apr 08, 2021	Approximate Sample 525g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP449 0.3-0.9	21-Ap17400	Apr 08, 2021	Approximate Sample 478g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP461 1-2	21-Ap17401	Apr 08, 2021	Approximate Sample 470g Sample consisted of: Brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP454 0.7-1.2	21-Ap17402	Apr 08, 2021	Approximate Sample 442g Sample consisted of: Brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Client Sample ID	Eurofins Sample No.	Date Sampled	Sample Description	Result
TP456 2.8-3	21-Ap17403	Apr 08, 2021	Approximate Sample 418g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP445 1-1.8	21-Ap17411	Apr 08, 2021	Approximate Sample 513g Sample consisted of: Brown coarse-grained clayey soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.
TP459 1.4-2.4	21-Ap17415	Apr 08, 2021	Approximate Sample 522g Sample consisted of: Brown coarse-grained clayey-sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No trace asbestos detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.
