Report on Detailed Site (Contamination) Investigation Stage 1 of 2040 Masterplan: Adaptive Reuse of Wilkinson House 215 Forbes St, Darlinghurst

1. Introduction

This report presents the results of a detailed site (contamination) investigation (DSI) undertaken by Douglas Partners Pty Ltd (DP) for Stage 1 (Wilkinson House) of the 2040 Masterplan at Sydney Church of England Girls Grammar School (SCEGGS) Darlinghurst. The school is located at 215 Forbes Street, Darlinghurst (school property) with Stage 1 of the masterplan involving the adaptive reuse of Wilkinson House (the site). The site location is shown on Drawing 1, Appendix B.

The DSI was initially undertaken in August 2019¹ with the understanding that Stage 1 involved the demolition and redevelopment of Wilkinson House comprising two to three storeys and with the new ground floor level to be approximately 0.8 m below the existing ground floor level (RL 29.5 m AHD). Since this investigation was reported, the Stage 1 plans have progressed, and the proposed development plans have been updated. The updated proposed development plans include retaining the façade and foyer of the existing Wilkinson House and complete redevelopment of the internal areas of the building, including expanding the extent of the current basement's footprint. It is understood that the building will be used as an educational space primarily for learning spaces with some offices as previously intended. Wilkinson House is located within the secondary school and will be used for secondary school purposes. As such, this update to the DSI has been provided to reflect the changes to the proposed development. The updated proposed development plans are included in the smart design studio architectural drawings in Appendix B.

The update to the DSI was commissioned in an email dated 11 October 2021 by Warwick Smith of Sandrick Pty Ltd on behalf of SCEGGS Darlinghurst Limited and was undertaken in general accordance with DP's proposal SYD180462.P.003 dated 16 September 2021.

DP has previously undertaken a preliminary site investigation (PSI) for the 2040 Masterplan, which addressed the whole school property. This was reported in DP report titled, 'Report on Preliminary Site (Contamination) Investigation, 2040 Masterplan, SCEGGS Darlinghurst', DP ref: 86514.00, October 2018 (DP, 2018a).

DP (2018a) recommended a DSI for each stage of the development as design plans became available. DP understands that since the initial DSI was issued for the Wilkinson House redevelopment, the Stage 1 development plans have progressed and a SEARs has been issued for the development. Therefore, the updated DSI is required to address the Part 19 of the SEARs.

¹ DP (2019), Report on Detailed Site (Contamination) Investigation, Stage 1 (Wilkinson House) of 2040 Masterplan, 215 Forbes Street, Darlinghurst, Prepared for SCEGGS Darlinghurst Limited. DP ref: 86514.02.R.001.rev0 DSI, dated 6 August 2019.

The primary objective of the DSI was to assess the suitability of the site for the proposed development and to further identify contamination (or potential contamination) issues that require management as part of the proposed development. The DSI also presents a preliminary waste classification assessment to assist in project planning for the disposal of surplus soils created as a result of the proposed development.

DP (2018a) included a desktop study and review of the site history documents regarding the school property. Section 5 and Section 6 below provide a summary of the relevant information concerning Wilkinson House. The relevant test results from DP (2018a) (SS1 and SS2) have also been included in this report.

2. Scope of Works

The scope of works for this DSI was as follows:

- Review previous reports, including DP (2018a) and extract relevant information with respect to Stage 1;
- Site walkover to identify accessible sampling locations and site features;
- Drill/ excavate five sample locations using hand tools to practical refusal on bedrock or within the fill to a maximum depth of 0.4 m. Sample locations were based on site access;
- Collect disturbed soil and/or bedrock samples from all sampling locations. This included a
 combination of surface samples (0 to 0.2 m), fill samples (0.3 m to 0.4 m) and bed rock samples,
 depending on subsurface conditions and access;
- Analyse selected soil samples (plus QA / QC analysis) at a NATA accredited laboratory for various combinations of the following contaminants of potential concern and parameters:
 - o Metals (As, Cd, Cr, Cu, Pb, Hg, Ni, Zn);
 - o Total recoverable hydrocarbons (TRH);
 - o Monocyclic aromatic hydrocarbons (benzene, toluene, ethylbenzene and xylene BTEX);
 - o Polycyclic aromatic hydrocarbons (PAH);
 - o Organochlorine pesticides (OCP);
 - Organophosphate pesticides (OPP);
 - o Polychlorinated biphenyls (PCB);
 - o Total phenols;
 - o Asbestos;
 - o Australian standard leaching procedure (ASLP) for metals and PAH; and
 - o Toxicity characteristic leaching procedure (TCLP) for selected metals and PAH to inform waste classification.
- Field sampling and laboratory analysis with reference to standard environmental protocols, including 10% replicates, trip spikes and trip blanks and appropriate chain of custody procedures and in-house laboratory QA / QC testing; and

Provision of this DSI report prepared with reference to NSW EPA endorsed guidance which
assesses the site's suitability for the proposed development. A preliminary in situ waste
classification is provided to assist project planning.

3. Site Identification and Location

SCEGGS is located in an intensely developed residential and commercial area of Darlinghurst about 1 km from the Sydney Central Business District. Overall, the school occupies an irregular shaped area and is currently occupied by many school buildings which range in age from relatively recent to in excess of 50 years old. The school itself is located on the corner of Forbes Street and St Peters Street, with a site address of 215 Forbes Street. The school is intersected by St Peters Street, with the old church on the northern side of the street repurposed into a multipurpose hall space and performing arts buildings.

The site, Wilkinson House, which forms part of the school property, is a multi-storey brick building built *circa*. 1920, located at the north-eastern end of the campus.

Table 1: Site Identification

Item	Description	
Site Address	215 Forbes Street, Darlinghurst	
Legal Description	(Part of) Lot 100, D.P. 1151279	
Approximate Area	410 m²	
Zoning	Zone R1 General Residential	
Local Council Area	City of Sydney	

The site is shown on Drawing 1, Appendix B, and site photographs are also provided in Appendix C.

4. Review of Previous Reports

DP has undertaken a number of previous investigations across the school property including:

- DP, 'Report on Geotechnical Investigation for Proposed Sports Hall, SCEGGS at Forbes Street, Darlinghurst', DP ref: 20080, July 1994 (DP, 1994);
- DP, 'Report on Preliminary Waste Classification Assessment for Proposed Science and Technology Building, Sydney Church of England Girls Grammar School Darlinghurst', DP ref: 45427, April 2008 (DP, 2008a);
- DP, 'Report on Geotechnical Investigation, Proposed Science and Technology Building Sydney Church of England Girls Grammar School Darlinghurst', DP ref: 45427, April 2008 (DP, 2008b);
- DP, 'Report on Pavement Investigation, SCEGGS Darlinghurst, St Peters Street Darlinghurst', DP ref: 45427.04, November 2012 (DP, 2012);

- DP, 'Report on Preliminary Site (Contamination) Investigation, 2040 Masterplan, SCEGGS Darlinghurst', DP ref: 86514.00, October 2018 (DP, 2018a); and
- DP, 'Report on Preliminary Geotechnical Assessment, SCEGGS Darlinghurst', DP ref: 86514.01, October 2018 (DP, 2018b).

4.1 DP (1994) - Geotechnical Investigation for Sports Building

In June 1994 DP carried out a geotechnical investigation for the sports building which is located immediately to the south of the proposed sports hall, and adjacent to the south of Wilkinson House. This investigation comprised six bores drilled to depths of up to 8.5 m below the existing surface level to obtain detailed information on the soil and rock stratigraphy. The results of the investigation were provided in a Report for Tierney & Partners, Consulting Engineers for the sports building design.

The investigation indicated that sandstone bedrock was generally located less than 0.5 m below surface level. Fill was identified above the sandstone in five of the bores and comprised brown sand, sandy clay and sandstone rubble to a maximum depth of 2 m.

The investigation also comprised mapping of the sandstone cliff-face which was eventually excavated for the sports complex.

4.2 DP (2008a) - Waste Classification Investigation for Science & Technology Building

In April 2008 DP undertook a preliminary waste classification assessment for the proposed Science and Technology building, located on St Peters Street (bordering Wilkinson House to the west).

The investigation involved a review of the site history, including a title deeds search, historical aerial photographs and a WorkCover (now known as SafeWork) Dangerous Goods search for the area of the proposed new development within the school.

The title deeds search, and historical aerial photographs indicated that the northern part of the school, on St Peters Street was previously used for industrial purposes, including a metal and moulding manufacturing business during the 1950s. By the 1970s the site was owned by SCEGGS and used for the school. The WorkCover search found no records relating to the site.

Additionally, an intrusive investigation comprising five test bores to a depth of 3 m or prior refusal was undertaken. The intrusive investigation indicated 1 m of fill overlying weathered sandstone. The fill comprised light grey brown sand with some gravel, as well as crushed sandstone to a maximum depth of 0.95 m. No free groundwater was observed during the investigation.

Samples were collected from the five bores and were tested against the waste classification criteria. High concentrations of TRH, total PAH and benzo (a) pyrene (B(a)P) were recorded. Slag was observed in one of the bores and may have been the cause of the high concentrations of total PAH and B(a)P. Moreover, TCLP results recorded generally low leachate concentrations for the analysed samples. The fill was generally classified as solid waste under the NSW EPA *Environmental Guidelines: Assessment Classification and Management of Liquid and Non-Liquid Wastes (1999)*.

It is noted that the science and technology building has now been constructed which DP understands included the excavation and disposal off-site of all fill and excavation into the bedrock.

4.3 DP (2008b) - Geotechnical Investigation for Science and Technology Building

A geotechnical investigation was undertaken in conjunction with DP (2008a) to provide advice on the subsurface conditions of the site west of the Wilkinson Building.

The investigation reported the following observations about the subsurface soil and groundwater conditions:

A profile comprising about 1 m of filling overlying weathered sandstone and then medium and high strength sandstone from depths of 0.35 m to 1.0 m. The medium and high strength sandstone had some moderately weathered zones in the upper 2 m as indicated by some core loss and clay filled joints. Below depths of about 3 m, however, sandstone was generally medium and high strength fresh unbroken rock with few defects.

The results indicate relatively uniform conditions with approximately 1 m of filling and weathered material overlying medium or high strength bedrock. The bedrock surface appears to be dipping generally in a north-westerly direction, following the natural surface contours. The overall level difference diagonally across the proposed development site of the surface of the medium or high strength rock appears to be of the order of 4 m from the previously drilled Bore 5 to Bore 102 in the north-western corner of the site.

No free groundwater was observed during the current investigation phase, and this is consistent with observations made during the previous investigation in 1994. It is expected, however, that after periods of heavy rainfall some seepage will occur along the bedrock surface. The permanent water table within the intact bedrock is expected to be at many tens of metres below the current site level with groundwater flow along bedding planes and through vertical joints being extremely low.

4.4 DP (2012) - Pavement Investigation for St Peters Street, Darlinghurst

DP (2012) reported a geotechnical investigation to assess pavement and subgrade conditions of St Peters Street, Darlinghurst. The investigation involved the drilling of four bores.

The subsurface conditions observed during drilling were summarised as follows:

- Asphaltic concrete 50 110 mm thick.
- Filling (Roadbase) well compacted gravelly sand (igneous gravel) to depths of 0.1 m 0.2 m.
- Filling slightly gravelly, sand filling (crushed sandstone) with some clay to depths of 0.4 m -1.0 m. DCP tests indicate that the filling is moderately to well compacted.
- Sandstone low to medium strength, medium to coarse grained sandstone intersected at depths of 0.4 m to 0.8 m in all bores.

The investigation did not report on groundwater.

4.5 DP (2018a) - PSI for 2040 Masterplan

A preliminary site investigation was undertaken for the 2040 Masterplan and was reported in DP (2018a). DP (2018a) involved a desktop study reviewing the site history documents regarding the whole school property, as well as a limited intrusive investigation.

In summary, the desktop study and site walkover found that:

The site appears to have undergone significant change as it transitioned from mixed use residential housing and commercial / industrial uses to the school during the 1900s. Since SCEGGS bought and moved into Barham House in 1901, the school expanded purchasing surrounding properties. Over time, the school has demolished many of the old buildings and constructed a range of new educational facilities and in the process removed filling from the footprints of these new buildings and excavated into the natural bedrock. These changes were evident in the historical aerial photographs and historical title deeds. The surrounding land use appears to have progressively changed from some residential with commercial and industrial and to a higher density residential land use, with some small commercial businesses still present.

DP (2018a) limited intrusive investigation included six boreholes and two surface samples. It should be noted that as the investigation was regarding the whole school property, including both the primary and secondary schools, a conservative approach was adopted when selecting the site assessment criteria. Therefore, a generic primary school land use was applied (i.e., generic land use category 'A' from Schedule B1, National Environment Protection Council, National Environment Protection Measure 1999, as amended (NEPC, 2013)) even though the school property is predominately used for secondary school purposes. Moreover, given the assessment included landscaped and other areas with potential ecological value, consideration was also given to the ecological screening criteria outlined in NEPC (2013). The results of the investigation were summarised as follows:

Based on the scope of the works undertaken and results presented in this PSI, it is considered that there appears to be a low risk of widespread gross contamination of the site. The main risk appears to be primarily associated with the lead (SS1) and to a lesser extent zinc, TRH and PAH (with respect to terrestrial ecology) present in the filling at the site, in particular within areas that have not been recently developed. It is noted that both of these contaminants are non-volatile and hence a vapour intrusion pathway into site buildings is not of concern. The sampling, which has been undertaken in the areas of the three new proposed buildings (identified herein), observed relatively shallow filling whilst the laboratory analysis indicates the contaminants have generally low leachability characteristics with the exception of lead in sample SS1.

With respect to sample SS1, this was collected from the surface in a dry area with limited fill (as indicated by the exposed sandstone bedrock) within the basement of the Wilkinson Building. This suggests the potential source of the lead contamination (i.e., the fill) and its potential to leachate into the groundwater is likely to be limited due to the groundwater being at depth. Moreover, it is recommended that the lead contamination identified at SS1 is managed by restricting direct exposure to the area, which should be feasible given its location in a restricted access basement. Such management could be incorporated into the hazardous building materials register noted below.

DP (2018a) recommended that a detailed site investigation (DSI) be undertaken for each of the future developments at the school, allowing for additional coverage of soils within the development footprints. This would allow the soils to be assessed for their suitability to remain on site. Given the likely depth to groundwater table (within the bedrock) and the shallow fill, investigation of groundwater was not considered likely to be required, however, would be informed by further assessment of the soils.

In addition to a DSI, DP (2018a) also recommended a waste classification of soils requiring offsite disposal, an unexpected finds protocol and a hazardous building materials survey prior to or following demolition of the existing structures (as appropriate).

4.6 DP (2018b) - Geotechnical Investigation for 2040 Masterplan

The DP (2018b) geotechnical assessment included a desktop study of available information gathered from previous geotechnical investigations carried out on the site by DP for various other developments (as discussed above in this Section), as well as a site walkover.

The report provided comments based on previous investigations and current site observations. DP (2018b) recommended additional geotechnical investigations following the finalisation of design details for the developments in the 2040 Masterplan.

5. Environmental Setting

As DP (2018a) included a detailed desktop study and review of the site history documents regarding the school property, this information has been reviewed in Sections 5 and 6 below with respect the site (Wilkinson House). A summary of the relevant information is provided below.

5.1 Topography

Based on the Lotsearch Report (Enviro Professional Report Ref: LS003975 EP, dated 13 August 2018, p. 135, Appendix D) the site is located in undulating country with a general slope to the north towards Woolloomooloo Bay.

Furthermore, based on the Lotsearch Report the site topography is characteristic of the regional topography. The ground surface level across the site ranges from approximately reduced level (RL) 34 m relative to Australian Height Datum (AHD) at the south-eastern corner to RL 30 m AHD at the north-western side of the site.

5.2 Site Geology

The Lotsearch Report (pp. 148-149, Appendix D) indicates that the site is underlain by Triassic Hawkesbury Sandstone. This geological formation usually comprises of medium to coarse grained quartz sandstone with minor shale and laminite lenses. Previous investigations on the site confirm the geological mapping with Hawkesbury Sandstone at shallow depths below the surface.

Within the 1 km buffer search zone reported by the Lotsearch Report, there were a number of other geological formations identified. The nearest surrounding geological units include man made fill to the north of the site, quaternary aged medium to fine grained marine sand with podosols to the east and Triassic aged Ashfield Shale from the Wianamatta Group to the south of the site.

The Lotsearch Report (pp. 151- 152, Appendix D) indicates that the site is underlain by the erosional Gymea Soil Landscape which is comprised of undulating to rolling rises and low hills on Hawkesbury Sandstone, with a local relief of 20-80 m, slopes of 10-25% and rock outcrops of less than 25%.

5.3 Acid Sulphate Soils (ASS)

Reference to the Lotsearch Report (pp.157-158, Appendix D) indicates that the site is mapped as having a low probability of ASS occurring. The area 50 m to the north of the site (which is located down-gradient and at a lower RL AHD) is classified as extremely low probability (1-5%) of ASS occurring.

The onsite ASS Plan Class, as reported in the Lotsearch Report (p.155- 156, Appendix D), is Class 5, which means that works within 500 metres of adjacent Class 1- 4 land that is below 5 m AHD and works by which the water table is likely to be lowered below 1 m AHD on adjacent Class 1-4 land, present an environmental risk. The nearest soil class is Soil Class 2, 217 m to the north, which would only present an environmental risk if the proposed works lowered water table in that area below 1 m AHD. However, the permanent water table within the intact bedrock is expected to be at many tens of metres below the current site level.

Based on the mapped and previously observed geology, the site (and proposed development levels for the new building) being above 25 m AHD and the mapping, ASS were not considered to be of concern for the site and hence have not been considered further.

5.4 Groundwater and Surface Water

Reference to the Lotsearch Report (pp. 137-143, Appendix D) indicates that there are nine registered groundwater bores within 500 m of the school property, the closest being a monitoring bore 34 m southwest of the school. Work summaries for the available bores and the locations are included in the Lotsearch Report (pp. 144-147, Appendix D).

No water bearing zones were identified in the borehole logs from previous DP investigations (DP (1994), DP (2008a), DP (2008b), and DP (2012)).

There are no water bodies or water courses present on site. The closest surface receptor to the site is Sydney Harbour, located approximately 720 m to the north of the site.

Based on local topography observed from the elevation contours in the Lotsearch (p. 135, Appendix D), groundwater is anticipated to flow north into Sydney Harbour. Of note, however, and as mentioned in Section 4, no free groundwater was observed during previous investigations. DP (2008b) suggested that it was expected that after periods of heavy rainfall some seepage will occur along the bedrock surface. The permanent water table within the intact bedrock is expected to be at many tens of metres below the current site level.

The site is located on aquifers described as porous, extensive and highly productive aquifers and does not fall within the Botany Groundwater Management Zones (p.136, Lotsearch, Appendix D).

6. Site History

This section provides a summary of the relevant information concerning Wilkinson House, extracted from DP (2018a), in particular an update of the title deeds and historical aerial photographs.

6.1 Title Deeds

A historic title deed search was conducted by InfoTrack Pty Ltd and was used to obtain ownership and occupancy information including company names and the occupations of individuals for a selected spread of lots within the school boundary. A full copy of the title deeds is reported in DP (2018a) and a summary of the title deeds relevant to Wilkinson House is included in Table 2 below.

The title information can assist in the identification of previous land uses by the company names or the site owners and can therefore assist in establishing whether there were potentially contaminating activities occurring at the site. Notwithstanding, it should be noted that whilst titles can assist, they are not conclusive of land use and need to be used in conjunction with other site information (e.g., aerial photographs) to gain a better understanding of the likely land use.

A full copy of the search, including information on easements and leases is included in Appendix D.

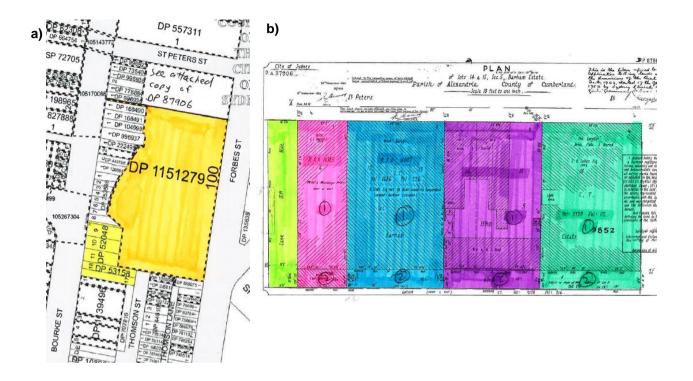

Figure 1: a) Breakdown of lots within 165 - 215 Forbes Street, Darlinghurst, b) Historical breakdown of lots at the northern end of Lot 100, D.P. 1151279, previously known as D.P. 87906. The site is likely to have been located within the turquoise and possibly purple coloured lots within the east of D.P. 87906.

6.2 Historical Aerial Photography

The history of the site's land use and development has been reviewed by reference to historical aerial photographs included in the Lotsearch Report (pp. 110-120, Appendix D).

A review of the 1943 aerial image found that the site consisted of Wilkinson House with the same roofline and foot print as at present. The site remained unchanged when compared between the 1943 and 2019 aerial images. Table 3 below summarises the changes observed in the aerial photographs for the surrounding school property and area.

Table 3: Aerial Photograph Review

Year	Surrounding School Property	Surrounding Land Use
1943	The northern side of St Peters Street consisted of a large church building and some smaller buildings next to it. On the main school site (the southern side St Peters Street), the site consisted of some large buildings (possible industrial/commercial) along St Peters Street with the main school building with a few trees in the centre of the site. The far southern end of the school consisted of townhouses, likely residential.	The surrounding areas consisted of townhouses to the west and south, larger buildings and a large vacant lot to the east of the site, and medium rise, possibly commercial buildings to the north of the site.

Year	Surrounding School Property	Surrounding Land Use
1951	The school appeared to remain mostly unchanged when compared to the 1943 image, with the exception of some renovations that occurred on the building at the northern end of the main school property.	The surrounding area remained mostly unchanged when compared to the 1943 image.
1955	The school remained mostly unchanged when compared to the 1951 image, with the exception of the removal of some trees and the addition of a new building along the western boundary of the school and cleared area on the eastern boundary of the school (possibly used as a tennis court).	The surrounding land appeared to remain mostly unchanged when compared to the 1951 image.
1961	The school appeared to remain mostly unchanged when compared to the 1955 image, with the exception of the addition of a tennis court on the previously cleared area on the eastern boundary of the school.	The surrounding land appeared to remain mostly unchanged when compared to the 1955 image.
1965	The school appeared to remain mostly unchanged when compared to the 1961 image.	The surrounding land appeared to remain mostly unchanged when compared to the 1961 image.
1970	Some areas of the school had undergone significant changes particularly on the western boundary of the school. Three new multistorey buildings were added to the site, whilst the residential townhouses at the southern end of the school had been demolished.	The surrounding land appeared to remain mostly unchanged when compared to the 1965 image.
1982	There appeared to be no significant changes to the school since the 1970 photograph, with the exception of some minor renovations and the addition of an outdoor swimming pool at the northern end of the school.	There appeared to be no significant changes to surrounding areas the site when compared to the 1970 photograph, with the exception of a new high rise building north-west of the school.
1991	There appeared to be no significant changes to the school since the 1982 photograph.	There was no apparent significant change to surrounding areas when compared to the 1982 photograph, with the exception of the demolition of houses and construction of a road west of the school and the removal of the large warehouse to the east, replaced by further high rise buildings.
2000	There appeared to be no significant changes to the school since the 1991 photograph, with the exception of the removal of the swimming pool and addition of a tennis court the middle of school.	There appeared to be some changes to surrounding areas of the school when compared with the 1991 photograph, including the demolition of a previous high rise building and construction of a new high rise building adjacent to the school to the east, as well as further construction to the road to the west of the school.

Year	Surrounding School Property	Surrounding Land Use
2009	The southern end of the school had undergone significant change with the demolition of the previous buildings and construction of an extensive new building occupying the southern portion of the school (currently known as the Junior School).	There appeared to be no significant changes to surrounding areas the school since when compared to the 2000 photograph.
2015	The northern end of the main precinct of the school, bordering on St Peters Street and west of Wilkinson House had undergone some change with the construction of a new building. The rest of the school remained mostly unchanged.	There appeared to be no significant changes to surrounding areas of the school when compared with the 2009 photograph.
2016	There appeared to be no significant changes to the school since the 2015 photograph.	There appeared to be no significant changes to surrounding areas of the school when compared with the 2016 photograph.

6.3 Site Walkover

A walkover of the site was undertaken by an environmental scientist from DP on 23 July 2019. Observations of the site and surrounding areas, in particular with respect to the potential for contamination, are summarised below with photographs provided in Appendix C. An additional site walkover was undertaken by DP on 12 October 2021as part of the update to the DSI. The site remained unchanged from the observations reported in the DSI in 2019.

Wilkinson House forms part of the Secondary School of SCEGGS Darlinghurst. The site consists of a two to three storey brick building (Photograph 1), which currently contains the year 12 common room (Photograph 2), offices, classrooms, meeting spaces (Photograph 3) and a couple of kitchenette facilities. The northern half of the building has a lower ground level which follows the topography of the site. The building was relatively well maintained.

Sandstone bedrock was observed in the service cupboards and access areas in the north-eastern areas of the site (see locations SS1 and SS2 on Drawing 1, Appendix B and Photograph 4 in Appendix C). The building floor was a suspended beam and board construction thereby raising the floor off the underlying subsurface (Photographs 6 and 7). This created a crawl space in the southern and southwestern areas of the site, accessed from the western side of the building (Photograph 5).

In summary the site is surrounded by the following:

- North: St Peters Lane;
- East: Forbes Street with medium to high density residential buildings;
- South: Gymnasium (part of the school); and
- West: Science and Technology building (part of the school).

7. Preliminary Conceptual Site Model

A CSM is a representation of site-related information regarding contamination sources, receptors and exposure pathways between those sources and receptors. The CSM provides the framework for identifying how the site became contaminated and how potential receptors may be exposed to contamination either in the present of in the future i.e. it enables an assessment of the potential source - pathway - receptor linkages (complete pathways).

7.1 Potential Contamination Sources and Contaminants of Concern

Based on the current investigation, the following potential sources of contamination and associated contaminants of potential concern (COPC) have been identified and are outlined in Table 4 below.

Table 4: Potential Contamination Sources and Contaminants of Concern

Potential Source	Description of Potential Contaminating Activity	Contaminants of Concern
Fill of unknown origin	Filling of site from unknown sources.	Metals, TRH, BTEX, PAH, OCP, OPP, PCB, phenols and asbestos.
Former sections of Wilkinson House on site	Demolition/refurbishment of former sections of the Wilkinson House impacting the fill and surficial soils.	Asbestos, lead based paints, PCB capacitors and synthetic mineral fibres (SMF).
Existing buildings on site	Potential presence of hazardous building materials in the existing Wilkinson House foundations and frame.	Asbestos, lead based paints, PCB capacitors and synthetic mineral fibres (SMF).
Historic and current site uses	Inappropriate disposal of wastes. Application of pesticides for building management.	Metals, TRH, BTEX, PAH, OCP, OPP, PCB and phenols.

With respect to the risk of contamination from off-site sources due to current or past land uses, the properties of greatest concern were considered to be either of significant distance from the site or hydraulically down-gradient. Moreover, the risk of contamination from such sites is considered most likely via a groundwater migration pathway and as noted previously groundwater is expected to be at depth within the bedrock at this site. Given this, the risk of contamination at the site associated with off-site sources was considered to be low and is not considered herein.

Therefore, the potential sources of contamination and contaminants of concern can be summarised as below:

- S1 Fill and impacted surficial soils (including fill from unknown sources, historic and current site uses and former sections of Wilkinson House on site); and
- S2 Current Wilkinson House building on site.

7.2 Potential Receptors

Human Health Receptors

- R1 Current site users (school);
- R2 End users (school);
- R3 Construction and maintenance workers; and
- R4 Adjacent site users (residential / commercial).

Environmental Receptors

R5 Groundwater.

Whilst ecological receptors in the soil may be present, given the historical fill and continued land use of the site as a school since the mid-1900s, ecological receptors are considered likely to have adapted to the current environment. Therefore, remediation of the site (e.g., removal) to address exceedances of environmental screening / investigation levels would be considered in the aggregate to be more counterproductive to the existing environment. It thereby follows that whilst ecological receptors may be present, they are not considered to be relevant to this assessment and hence are not considered further.

Additionally, surface water was not considered as a potential environmental receptor for this investigation as the nearest surface water body was Sydney Harbour approximately 750 m north of the site.

7.3 Potential Pathways

Potential pathways for the identified contamination to impact on the receptors include the following:

- P1 Ingestion and dermal contact;
- P2 Inhalation of dust and / or vapour; and,
- P3 Leaching of contaminants and vertical migration into groundwater.

7.4 Summary of Preliminary CSM

A 'source - pathway - receptor' approach has been used to assess the potential risks of harm being caused to human, water or environmental receptors from contamination sources on or in the vicinity of the site, via exposure pathways. The possible pathways between the above sources (S1 and S2) and receptors (R1 to R5) are provided in Table 5 below.

Table 5: Summary of Potential Complete Pathways

Potential Source and Contaminants of Concern	Pathway	Receptor	Risk Management Action Recommended
S1 - Fill and impacted surficial soils Metals, TRH, BTEX, PAH, OCP, OPP, PCB, phenols and	P1 - Ingestion and dermal contact P2 - Inhalation of dust and/or vapours P2 - Inhalation of dust	R1 - Current users R2 - End users R3 - Construction and maintenance workers R4 - Adjacent site users	An intrusive investigation is recommended to assess potential contamination of soils and the suitability of soils to be retained on site. Included in this report. Intrusive investigation of groundwater if risk identified by the soil investigation and/or final development.
asbestos.	and/or vapours	Transport and door	
	P3 - Leaching and vertical migration into groundwater	R5 - Groundwater	
S2 - Existing buildings on site Asbestos, lead based paints, PCB capacitors, SMF.	P1 - Ingestion and dermal contact P2 - Inhalation of dust and/or vapours	R1 - Current users R3 - Construction and maintenance workers	A hazardous building materials assessment is required for the existing building. Hazardous materials, if present, will need to be removed in accordance with relevant legislation and guidelines prior to demolition and managed appropriately in the interim or where buildings are to be retained.

8. Field Work Methods

8.1 Data Quality Objectives and Project Quality Procedures

This DSI has been devised in general accordance with the seven step data quality objective (DQO) process which is provided in Appendix B, Schedule B2 of NEPC (2013). The DQO process is outlined as follows:

- State the problem;
- Identify the decision;
- Identify inputs into the decision;
- Define the boundary of the assessment;
- Develop a decision rule;
- Specify acceptable limits on decision errors; and

Optimise the design for obtaining data.

Referenced sections for the respective DQOs listed above are provided in Appendix E.

8.2 Data Quality Indicators

The performance of the assessment in achieving the DQO was assessed through the application of data quality indicators (DQI) as defined by:

Completeness: A measure of the useable data from a data collection activity; and

Comparability: The confidence (expressed qualitatively) that data can be considered

equivalent for each sampling and analytical event.

Representativeness: The confidence (expressed qualitatively) that data are representative of each

media present on the site;

Precision: A quantitative measure of the variability (reproducibility) of data; and

Accuracy: A quantitative measure of the closeness of reported data to the "true" value.

Further comments on the DQIs are presented in Appendix E.

8.3 Soil Sampling Locations and Rationale

Environmental field work was undertaken on 23 July 2019. The sample locations are shown on Drawing 1, Appendix B. The sample locations were located in accessible areas of the site (e.g., in cupboards and crawl spaces beneath the building) to gain a reasonable coverage of the soil profile and contamination status. Two of the sample locations (SS1 and SS2) were in areas of the site where surface samples were previously collected for DP (2018a), SS1 and SS2².

Sample locations SS1 and SS2 were drilled using a hand drill to a maximum depth of 0.17 m into the sandstone bedrock. The purpose of this was to obtain samples from within the bedrock to allow assessment of the potential impact from the overlying surficial fill which was recorded in DP (2018a) to contain elevated metals (namely lead and zinc).

Sample locations BH201 to BH203 located within the crawl space were excavated using hand tools to a maximum depth of 0.4 m. This was the practical extent of excavation given the nature of the fill (silty sand fill with anthropogenic inclusions) and the limited height of the crawl space.

Soil (surface and fill) samples were collected from all five sample locations. Samples of the bedrock were also collected from SS1 (SS1 Bedrock and SS1Drilled) and SS2 (SS2 Drilled).

Selected soil samples were analysed for the chemicals of concern listed in Section 7. Samples were selected based on site observations (odour, composition etc.), and their location within the subsoil and bedrock strata (*i.e.*, fill or natural).

_

² Location identification (i.e., SS1 and SS2) was retained for the current round of sampling given sampling was at the same locations as those surface locations sampled for DP (2018a).

8.4 Soil Sampling Procedures

Environmental sampling was performed with reference to standard operating procedures outlined in the DP *Field Procedures Manual*. All samples selected for laboratory analysis were recorded on DP chain-of-custody (COC) sheets (Appendix F). The general soil sampling procedure comprised:

- Soil samples were recovered directly from excavated/drilled sample locations;
- Use of disposable sampling equipment including disposal nitrile gloves;
- Transfer of samples into laboratory-prepared glass jars and capping immediately with Teflon lined lids;
- Labelling of sampling containers with individual and unique identification, including project number, sample location and sample depth:
- Placement of sample containers and bags into a cooled, insulated and sealed container for transport to the laboratory; and
- COC was maintained at all times and countersigned by the receiving laboratory on transfer of the samples.

Envirolab Services Pty Ltd (Envirolab), accredited by NATA for the analysis undertaken, was employed to conduct the sample analysis. The laboratory is required to carry out in-house QC procedures.

8.5 Analytical Rationale

The analytical scheme for soil samples was designed to obtain an indication of the potential presence and possible distribution of identified contaminants of potential concern identified for the site by the CSM, being metals, TRH, BTEX, PAH, OCP, OPP, PCB, phenols and asbestos. The results of the analytical testing were compared with the adopted site assessment criteria (SAC) discussed in Section 9.

The surface, near surface and fill samples were selected for analysis, being the most likely samples to contain contaminants at the sampled locations. As indicated above bedrock samples were also selected to inform the potential for the overlying fill to impact on the natural bedrock.

In addition, leaching analysis, primarily ASLP, and supplemented with TCLP analysis which was undertaken to inform waste classification, was also undertaken to inform the potential for contaminants in the soil to be mobile and impact the groundwater.

8.6 Field Quality Assurance and Quality Control

The field QC procedures for sampling were in general accordance with Douglas Partners' *Field Procedure Manual*, and are outlined in Section 8.4.

Field replicates were recovered and analysed for a limited suite of contaminants by means of intralaboratory analysis. In addition, a trip spike and blank was taken into the field on the day of the fieldwork as part of the investigations QC measures. This is consistent with standard industry practice and guidelines.

8.7 Laboratory QA / QC

The analytical laboratory, Envirolab Services Pty Ltd (ELS), accredited by NATA, is required to conduct in-house QA/QC procedures. These are normally incorporated into every analytical run and include reagent blanks, spike recovery, surrogate recovery and duplicate samples. These results are included in the laboratory certificates in Appendix F. The results of the DP assessment of laboratory QA/QC are included in Appendix E.

9. Site Assessment Criteria

The Site Assessment Criteria (SAC) applied in the current investigation are informed by the CSM which identified human receptors to potential contamination on the site (refer to Section 7). Analytical results were assessed (as a Tier 1 assessment) against the SAC comprising the investigation and screening levels of Schedule B1, NEPC (2013). The NEPC guidelines are endorsed by the EPA under the CLM Act 1997. Petroleum based health screening levels for direct contact have been adopted from the Cooperative Research Centre for Contamination Assessment and Remediation of the Environment (CRC CARE) Technical Report no.10 Health screening levels for petroleum hydrocarbons in soil and groundwater (2011) as referenced by NEPC (2013).

The investigation levels, screening levels and management limits are applicable to generic land use settings and include consideration of, where relevant, the soil type and the depth of contamination. The investigation and screening levels are not intended to be used as clean up levels. Rather, they establish concentrations above which further appropriate investigation (e.g., Tier 2 assessment) should be undertaken. They are intentionally conservative and are based on a reasonable worst-case scenario.

As mentioned previously, Wilkinson House is located within the secondary school of SCEGGS. The building is proposed to be used for educational purposes, primarily learning spaces and some staff offices.

9.1 Health Investigation and Screening Levels

The Health Investigation Levels (HIL) and Health Screening Levels (HSL) are scientifically-based, generic assessment criteria designed to be used in the first stage (Tier 1) of an assessment of potential human health risk from chronic exposure to contaminants.

HIL are applicable to assessing health risk arising via all relevant pathways of exposure for a range of metals and organic substances. The HIL are generic to all soil types and apply generally to a depth of 3 m below the surface.

HSL are applicable to selected petroleum compounds and fractions to assess the risk to human health via the inhalation pathway. The HSL depend on the soil types (i.e., sand, clay and silt) and depths to contamination. HSL for the direct contact pathway have been included even though direct contact HSL values are significantly higher than most other soil screening levels and are unlikely to be drivers for further investigation or site management.

The generic HIL and HSL are considered to be appropriate for the assessment of contamination at the site. Given the proposed land use and based on the CSM (Section 7) the adopted HIL and HSL are:

- HIL C Public open spaces, including secondary schools;
- **HSL C** Direct contact for recreational/ open space; and,
- HSL A and B Low to high density residential, including secondary schools.

Moreover, given the HSL-A/B criteria have been adopted which are more conservative than the intrusive maintenance worker scenario, the latter is considered to be addressed by the SAC.

Soil types considered were:

Sand (conservative), given the general variability of soil types at the site.

Depth to contamination considered was:

- 0 to <1 m for soil HSL have been adopted as an initial conservative screen; and
- HIL apply generally to the top 3 m of soil for residential land use.

The adopted HIL and HSL are shown in Table 6.

Table 6: HIL and HSL for Soil Contaminants

Contaminant	HIL C (mg/kg)	HSL A/B for Vapour Intrusion (mg/kg)	HSL C for Direct Contact (mg/kg)
Metals and Inorganics			
Arsenic	300	-	-

Phenols (pentachlorophenol used as a screen)	120	-	-
Other Organics PCB (non dioxin- like PCB only)	1	-	-

Note: TEQ is Toxic Equivalency Quotient.

9.2 Management Limits for Petroleum Hydrocarbons

In addition to appropriate consideration and application of the HSL, there are additional considerations which reflect the nature and properties of petroleum hydrocarbons, including:

- Formation of observable light non-aqueous phase liquids (LNAPL);
- · Fire and explosion hazards; and
- Effects on buried infrastructure e.g., penetration of, or damage to, in-ground services.

Management Limits to avoid or minimise these potential effects have been adopted in NEPC (2013) as interim Tier 1 guidance. The adopted Management Limits, from Table 1B (7), Schedule B1 of NEPC (2013) are shown in Table 7. The following site specific data and assumptions have been used to determine the Management Limits:

- The Management Limits will apply to any depth within the soil profile;
- The Management Limits are for a generic residential, parkland and public open space land use scenario; and
- The most conservative Management Limits for coarse textured soils have been adopted as various soil types are present at the site.

Table 7: Management Limits

Contaminant	Management Limit - Residential, Parkland and Open Space (mg/kg)	
TRH C ₆ - C ₁₀	700	
TRH >C ₁₀ -C ₁₆	1000	
TRH >C ₁₆ -C ₃₄	2500	
TRH >C ₃₄ -C ₄₀	10 000	

9.3 Asbestos in Soil

Bonded asbestos-containing material (ACM) is the most common form of asbestos contamination across Australia, generally arising from:

- Inadequate removal and disposal practices during demolition of buildings containing asbestos products;
- Widespread dumping of asbestos products and asbestos containing fill on vacant land and development sites; and
- Commonly occurring in historical fill containing unsorted demolition materials.

Mining, manufacturing or distribution of asbestos products may result in sites being contaminated by friable asbestos including free fibres. Severe weathering or damage to bonded ACM may also result in the formation of friable asbestos comprising fibrous asbestos (FA) and/or asbestos fines (AF).

Asbestos only poses a risk to human health when asbestos fibres are made airborne and inhaled. If asbestos is bound in a matrix such as cement or resin, it is not readily made airborne except through substantial physical damage. Bonded ACM in sound condition represents a low human health risk, whilst both FA and AF materials have the potential to generate, or be associated with, free asbestos fibres. Consequently, FA and AF must be carefully managed to prevent the release of asbestos fibres into the air.

A detailed asbestos assessment was not undertaken as part of this investigation. The presence or absence of asbestos (at a laboratory detection limit of 0.1 g/kg) as well as a visual assessment for the presence or absence of ACM at the test locations has been adopted for this assessment as an initial screen.

9.4 Preliminary Waste Classification

For preliminary waste classification purposes the results were compared against the criteria in the NSW EPA *Waste Classification Guidelines* 2014 (EPA, 2014).

EPA (2014) contains a six step procedure (outlined in Section 11.2) for determining the type of waste and the waste classification. Part of the procedure, for materials not classified as special waste or preclassified waste, is a comparison of analytical data initially against contaminant threshold (CT) values specific to a waste category. Alternatively, the data can be assessed against specific contaminant concentration (SCC) thresholds when used in conjunction with toxicity characteristic leaching procedure (TCLP) thresholds.

9.5 Field Observations

The fieldwork for the DSI comprised sampling at five locations. The observations from the test location are summarised in Table 8 below. Given the shallow nature of the sampling, generation of logs was not considered warranted.

Table 8: Summary of Field Observations

Sample Locations	Method	Sub Surface Profile	Samples Collected
SS1 and SS2	S1 and SS2 Hand drill SILTY SAND FILL - light brown silty sand fill with trace sandstone gravel, brick, timber and glass fragments. Fill up to 0.05 m in depth above the		SS1 SS1/0 m-0.05 m (Surficial fill)
	SANDSTONE - yellow, orange fine to medium grained sandstone. Sample locations drilled to a maximum depth of 0.17 m into bedrock.	SS1 Bedrock surfaceSS1 Drilled 0.025 m- 0.055 m	
		• SS1 Drilled 0.075 m- 0.17 m.	
			SS2 SS2 0 m-0.05 m (Surficial fill)
			SS2 Drilled: 0 m- 0.08 m
			• SS2 Drilled 0.08 m- 0.15 m.
			(Drilled sample depths measured from bedrock surface and do not include the depth of surficial fill).
BH201 to BH203	using hand tools with trace yellow sandstone gravel, whole bricks, and fragments of plastic, clinker, wood, metal, glass, terracotta and ceramic.	 BH201 0-0.15 m - Fill sample 0.3- 0.4 m - Fill sample 	
			BH202 • 0-0.15 m - Fill sample
		Asphaltic concrete gravel was observed in BH201 to a depth of 0.1 m.	0.3- 0.4 m - Fill sample
		General rubbish was observed on the surface of BH203.	BH203 • 0-0.15 m - Fill sample
		Sample locations excavated to a maximum depth of 0.4 m and were terminated within the fill.	• 0.2-0.3 m - Fill sample

Note: As indicated in Section 8.2 locations SS1 and SS2 were labelled to be consistent with DP(2018a) given sampling was undertaken at the same locations.

No signs of gross contamination (e.g., odours, staining) were observed at the time of sampling.

Building rubble was observed on the surface and in the fill at all sample locations. It is noted that building rubble can be an indicator for the potential presence of asbestos.

No free groundwater was observed at the sample locations.

9.6 Laboratory Results

The results of the laboratory analysis undertaken from both DP (2018a) (where relevant) and the current investigation are presented in the results summary tables in Appendix G and summarised below:

- Table G1a: Summary of Laboratory Results- Metals, TRH, BTEX, PAH (for site suitability);
- Table G2b: Summary of Laboratory Results- Phenol, OCP, OPP, PCB, Asbestos (for site suitability);
- Table G2: TCLP ASLP Test Results (for leachability information); and,
- Table G3: Waste Classification Test Results (for waste classification).

The full NATA laboratory certificates of analysis together with the chain of custody and sample receipt information are attached in Appendix F.

10. Discussion

10.1 Site Suitability

Reported concentrations of BTEX, OCP, OPP, PCB, phenols and asbestos in all soil samples analysed were below the SAC and laboratory reporting limit (LRL). Reported concentrations of TRH were below the SAC.

Reported concentrations of metals were below SAC with the exception of lead in samples SS1/0 m (1400 mg/kg) and BH202/ 0.3-0.4 (1100 mg/kg) which exceeded the HIL (600 mg/kg).

Reported concentrations of PAH were below SAC with the exception of B(a)P TEQ in samples BH201/0-0.1 (19 mg/kg), BH201/0.3-0.4 (23 mg/kg), BH202/0.3-0.4 (19 mg/kg) which exceeded the HIL (3 mg/kg).

All of the above exceedances occurred in the fill samples and not within the bedrock samples. Sample locations at BH201 to BH203 terminated within fill and therefore the extent of the fill in these locations is unknown. The results are considered reflective of the fill observed at the sample locations. For example, the presence of asphaltic gravel and clinker in BH201 and BH202 respectively is consistent with the elevated PAH concentrations recorded at these sample locations.

TCLP was undertaken on selected samples with elevated heavy metals (e.g., lead and mercury) and PAH to gain an understanding of their leachable characteristics. TCLP was undertaken to inform the waste classification and hence the procedure reflects the leaching characteristics in landfill conditions. In this regard, the process involves an acid based leaching procedure which would typically generate a

greater degree of leaching from the fill than would occur in the environmental setting of the site. However, it can also inform the potential for groundwater impact from contaminants in the soil / bedrock.

Given this, to reflect general environmental site conditions (e.g., groundwater and precipitation), ASLP analysis was undertaken as this is based on a neutral leaching procedure and is considered to be more reflective of site environmental settings.

Overall, both the TCLP and ASLP results are generally considered to be low. This is consistent with the low metal concentrations recorded in the natural bedrock, most notably, results from location SS1 where the highest lead concentration was recorded the overlying surficial fill. DP (2018a) reported a concentration of 1400 mg/kg in the surficial fill (sample SS1/0 m from DP (2018a)) compared to 3 mg/kg in the underlying bedrock (samples SS1- Bedrock (bedrock surface) and SS1- Drilled/ 0.025-0.05 m from the current investigation).

It is noted that one ASLP result for lead in sample BH202/0.3-0.4 recorded a slightly elevated result of 16 mg/L, however, this did not appear to be consistent with the generally more conservative TCLP result of 0.2 mg/L. Given this, the sample was reanalysed twice for both TCLP and ASLP, with TCLP results were consistent with the initial analysis (0.2 mg/L and 0.3 mg/L) whilst the ASLP results were noticeably lower (0.044 mg/L and 0.072 mg/L) and consistent with other results across this site. Given the TCLP results, the ASLP retest results and other ASLP results from across the site, the initial result was not considered to be reflective of the site conditions.

Given the above results, the sub surface conditions as discussed in Sections 5 and 10, and the depth to the groundwater table, the elevated concentrations reported in the fill are considered to be relatively immobile and hence the risk to the groundwater is considered to be low.

Therefore, the primary risk is associated with direct contact (inhalation and dermal contact) of site users with the fill.

10.2 Preliminary Waste Classification

The CT, SCC, and TCLP values relevant to this waste classification are shown in Table G3 (Appendix G).

The following Table 9 presents the results of the six step procedure outlined in EPA (2014) for determining the type of waste and the waste classification. This process applies to the fill at the site.

Table 9: Six Step Classification

Step	Comments	Rationale	
1. Is it special waste?	No	No asbestos-containing materials (ACM), coal tar, clinical or related waste, or waste tyres were observed in the bores. Asbestos was not detected by the analytical laboratory.	
2. Is it liquid waste?	No	Materials composed of a soil matrix.	
3. Is the waste "pre-classified"?	No	Fill and natural material did not fall into one of the pre-classified categories.	
Does the Waste have hazardous waste characteristics	No	Waste not observed to/ or considered at risk to contain explosives, gases, flammable solids, oxidising agents, organic peroxides, toxic substances or corrosive substances, substances liable to spontaneous combustion.	
5. Chemical Assessment	Conducted	Refer to Table G3 in Appendix G.	
6. Is the Waste Putrescible?	No	All observed components of fill composed of materials pre-classified as non-putrescible (i.e. soil).	

As shown in Table G3 (Appendix G) the contaminant concentrations for the analysed fill samples, including those from DP (2018a) were within the contaminant thresholds (CT1s) for General Solid Waste (GSW) with the exception of:

- Lead in samples SS2 (160 mg/kg) and BH203/ 0-0.1 (220 mg/kg), which exceeded the CT1 threshold (100 mg/kg); and
- Mercury in sample BH202/0.3-0.4 (6.8 mg/kg), which exceeded the CT1 threshold (4 mg/kg).

Additionally, the following samples exceeded the contaminant thresholds (CT2s) for Restricted Solid Waste (RSW):

- Lead in samples SS1/0 m (1400 mg/kg), BH201/ 0-0.1 (590 mg/kg), BH201/ 0.3-0.4 (530 mg/kg) and BH202/ 0.3-0.4 (1100 mg/kg) exceeded the CT2 threshold (400 mg/kg); and
- B(a)P in samples BH201/ 0-0.1 (13 mg/kg), BH201/ 0.3-0.4 (16 mg/kg) and BH202/ 0.3-0.4 (14 mg/kg) exceeded the CT2 threshold (3.2 mg/kg).

TCLP analysis was conducted on the samples with the exceedances listed above. The results were within the contaminant thresholds SCC1 and TCLP1 for GSW, with the exception of lead in SS1/0 m (which exceeded the TCLP1 criterion) and B(a)P in BH201 and BH202 (which exceeded the SCC1 criterion).

Due to the presence of clinker in the fill, application of the Immobilisation of Contaminants in Waste 1999/05 could be applied to the samples containing concentrations of B(a)P which exceeded the GSW criteria. As the exceedance of the GSW criteria was for total concentrations B(a)P (i.e., exceedance of the SCC1) and that subsequent leaching concentrations were below the LRL (and hence TCLP1

criteria), the fill in the vicinity of BH201 and BH202 where clinker was observed, can be classified as GSW under the Immobilisation of Contaminants in Waste 1999/05.

Consequently, the preliminary classification for the fill material across the site is General Solid Waste (non-putrescible), with the exception of the fill in the vicinity of SS1 which was preliminarily classified as restricted solid waste (RSW) due to the lead TCLP result.

Note: Building rubble was observed on the surface and in the fill at all sample locations which can be an indicator for potential presence of asbestos. Given this and that demolition of the building is still to be undertaken, confirmation of this preliminary waste classification is still required prior to disposal.

11. Updated Conceptual Site Model

Table 10: Updated Summary of Potential Complete Pathways

Potential Source and Contaminants of Concern	Pathway	Receptor	Risk Management Action Recommended
S1 - Fill and impacted surficial soils Metals, PAH and asbestos.	P1 - Ingestion and dermal contact P2 - Inhalation of dust and/or vapours P2 - Inhalation of dust	R1 - Current users R2 - End users R3 - Construction and maintenance workers R4 - Adjacent site users	This investigation found that the contaminated fill material can be addressed through removal of fill or the implementation of a long term environmental management plan.*
	and/or vapours		
S2 - Existing buildings on site Asbestos, lead based paints, PCB capacitors, SMF.	P1 - Ingestion and dermal contact P2 - Inhalation of dust and/or vapours	R1 - Current users R3 - Construction and maintenance workers	A hazardous building materials assessment is required for the existing building. Hazardous materials, if present, will need to be removed in accordance with relevant legislation and guidelines prior to demolition and managed appropriately in the interim or where buildings are to be retained.

^{*}Recommendations based on the results of this investigation are further outlined in Section 13.

Given the results of the investigation, the environmental receptors identified in Section 7.2, particularly the groundwater, are not considered to be potential receptors.

12. Conclusions and Recommendations

Based on the information available from the site history review and the site walkover, the site appears to have remained relatively unchanged since at least 1943 (and probably since *circa* 1920) where Wilkinson House was evident in the historical aerial photographs.

Based on the scope of the works undertaken and results presented in this DSI, it appears that the contamination on the site is limited to lead and B(a)P present in the fill on the site. As discussed, these contaminants are non-volatile and hence a vapour intrusion pathway into buildings is not of concern. Therefore, the primary source - pathway - receptor linkage of concern is from a direct contact perspective.

Given the final construction approach is yet to be determined, the exceedances in the fill can be addressed by the development through either:

- Remove all fill from the building footprint; or
- Retain the fill beneath the building footprint with the ground level and / or basement floors (existing
 and proposed) acting as a cap and hence removing the potential complete source pathway receptor linkages. This option will require the implementation of a long-term environmental
 management plan (LTEMP) for the building footprint.

Additionally, the following is recommended prior to or following demolition of existing structures (excluding the areas to be retained such as the external façade and existing foyer) (as appropriate):

- Hazardous Building Materials Survey: Given the age and potential renovations which may have taken place in Wilkinson House, it is considered likely to contain hazardous building materials. A hazardous material building survey and subsequent appropriate removal of any identified hazardous materials in accordance with relevant legislation and guidelines is to be undertaken prior to demolition;
- Waste classification: Confirmation of the waste classification of the soils requiring offsite disposal should be undertaken to inform the lawful disposal of excess spoil. The waste classification must be undertaken in accordance with the POEO Act (1997) and EPA (2014); and
- **Unexpected finds protocol:** An unexpected finds protocol is prepared and implemented during site works to address any potentially impacted fill (e.g., asbestos contamination) encountered during the works.

Based on the findings of this contamination investigation, it is considered that the site is suitable for the proposed new development, from a contamination perspective, subject to implementation of the above recommendations.

13. Limitations

Douglas Partners (DP) has prepared this report (or services) for this project at SCEGGS Darlinghurst, 215 Forbes Street, Darlinghurst in accordance with DP's proposal dated 16 September 2021 and acceptance received from Warwick Smith of Sandrick Pty Ltd on behalf of SCEGGS Darlinghurst Limited. The work was carried out under an agreed contract between DP and SCEGGS Darlinghurst Limited. This report is provided for the exclusive use of SCEGGS Darlinghurst Limited for this project only and for the purposes as described in the report. It should not be used by or relied upon for other projects or purposes on the same or other site or by a third party. Any party so relying upon this report beyond its exclusive use and purpose as stated above, and without the express written consent of DP, does so entirely at its own risk and without recourse to DP for any loss or damage. In preparing this report DP has necessarily relied upon information provided by the client and/or their agents.

The results provided in the report are indicative of the sub-surface conditions on the site only at the specific sampling and/or testing locations, and then only to the depths investigated and at the time the work was carried out. Sub-surface conditions can change abruptly due to variable geological processes and also as a result of human influences. Such changes may occur after DP's field testing has been completed.

DP's advice is based upon the conditions encountered during this investigation. The accuracy of the advice provided by DP in this report may be affected by undetected variations in ground conditions across the site between and beyond the sampling and/or testing locations. The advice may also be limited by budget constraints imposed by others or by site accessibility.

This report must be read in conjunction with all of the attached and should be kept in its entirety without separation of individual pages or sections. DP cannot be held responsible for interpretations or conclusions made by others unless they are supported by an expressed statement, interpretation, outcome or conclusion stated in this report.

This report, or sections from this report, should not be used as part of a specification for a project, without review and agreement by DP. This is because this report has been written as advice and opinion rather than instructions for construction.

Asbestos has not been detected by laboratory analysis, either on the surface of the site, or in fill materials at the test locations sampled and analysed. Building demolition materials, such as building materials, plastic, glass, ceramic and terracotta fragments were, however, located in on the surface and in the fill and these are considered as indicative of the possible presence of hazardous building materials (HBM), including asbestos.

Although the sampling plan adopted for this investigation is considered appropriate to achieve the stated project objectives, there are necessarily parts of the site that have not been sampled and analysed. This is either due to undetected variations in ground conditions or to budget constraints, or to parts of the site being inaccessible and not available for inspection/sampling (due to buildings present onsite) and reasonable access. It is therefore considered possible that HBM, including asbestos, may be present in unobserved or untested parts of the site, between and beyond sampling locations, and hence no warranty can be given that asbestos is not present.

The contents of this report do not constitute formal design components such as are required, by the Health and Safety Legislation and Regulations, to be included in a Safety Report specifying the hazards likely to be encountered during construction and the controls required to mitigate risk. This design process requires risk assessment to be undertaken, with such assessment being dependent upon factors relating to likelihood of occurrence and consequences of damage to property and to life. This, in turn, requires project data and analysis presently beyond the knowledge and project role respectively of DP. DP may be able, however, to assist the client in carrying out a risk assessment of potential hazards contained in the Comments section of this report, as an extension to the current scope of works, if so requested, and provided that suitable additional information is made available to DP. Any such risk assessment would, however, be necessarily restricted to the environmental components set out in this report and to their application by the project designers to project design, construction, maintenance and demolition.

Douglas Partners Pty Ltd

Appendix A

Notes About this Report

About this Report Douglas Partners

Introduction

These notes have been provided to amplify DP's report in regard to classification methods, field procedures and the comments section. Not all are necessarily relevant to all reports.

DP's reports are based on information gained from limited subsurface excavations and sampling, supplemented by knowledge of local geology and experience. For this reason, they must be regarded as interpretive rather than factual documents, limited to some extent by the scope of information on which they rely.

Copyright

This report is the property of Douglas Partners Pty Ltd. The report may only be used for the purpose for which it was commissioned and in accordance with the Conditions of Engagement for the commission supplied at the time of proposal. Unauthorised use of this report in any form whatsoever is prohibited.

Borehole and Test Pit Logs

The borehole and test pit logs presented in this report are an engineering and/or geological interpretation of the subsurface conditions, and their reliability will depend to some extent on frequency of sampling and the method of drilling or excavation. Ideally, continuous undisturbed sampling or core drilling will provide the most reliable assessment, but this is not always practicable or possible to justify on economic grounds. In any case the boreholes and test pits represent only a very small sample of the total subsurface profile.

Interpretation of the information and its application to design and construction should therefore take into account the spacing of boreholes or pits, the frequency of sampling, and the possibility of other than 'straight line' variations between the test locations.

Groundwater

Where groundwater levels are measured in boreholes there are several potential problems, namely:

 In low permeability soils groundwater may enter the hole very slowly or perhaps not at all during the time the hole is left open;

- A localised, perched water table may lead to an erroneous indication of the true water table;
- Water table levels will vary from time to time with seasons or recent weather changes.
 They may not be the same at the time of construction as are indicated in the report;
- The use of water or mud as a drilling fluid will mask any groundwater inflow. Water has to be blown out of the hole and drilling mud must first be washed out of the hole if water measurements are to be made.

More reliable measurements can be made by installing standpipes which are read at intervals over several days, or perhaps weeks for low permeability soils. Piezometers, sealed in a particular stratum, may be advisable in low permeability soils or where there may be interference from a perched water table.

Reports

The report has been prepared by qualified personnel, is based on the information obtained from field and laboratory testing, and has been undertaken to current engineering standards of interpretation and analysis. Where the report has been prepared for a specific design proposal, the information and interpretation may not be relevant if the design proposal is changed. If this happens, DP will be pleased to review the report and the sufficiency of the investigation work.

Every care is taken with the report as it relates to interpretation of subsurface conditions, discussion of geotechnical and environmental aspects, and recommendations or suggestions for design and construction. However, DP cannot always anticipate or assume responsibility for:

- Unexpected variations in ground conditions. The potential for this will depend partly on borehole or pit spacing and sampling frequency;
- Changes in policy or interpretations of policy by statutory authorities; or
- The actions of contractors responding to commercial pressures.

If these occur, DP will be pleased to assist with investigations or advice to resolve the matter.

About this Report

Site Anomalies

In the event that conditions encountered on site during construction appear to vary from those which were expected from the information contained in the report, DP requests that it be immediately notified. Most problems are much more readily resolved when conditions are exposed rather than at some later stage, well after the event.

Information for Contractual Purposes

Where information obtained from this report is provided for tendering purposes, it is recommended that all information, including the written report and discussion, be made available. In circumstances where the discussion or comments section is not relevant to the contractual situation, it may be appropriate to prepare a specially edited document. DP would be pleased to assist in this regard and/or to make additional report copies available for contract purposes at a nominal charge.

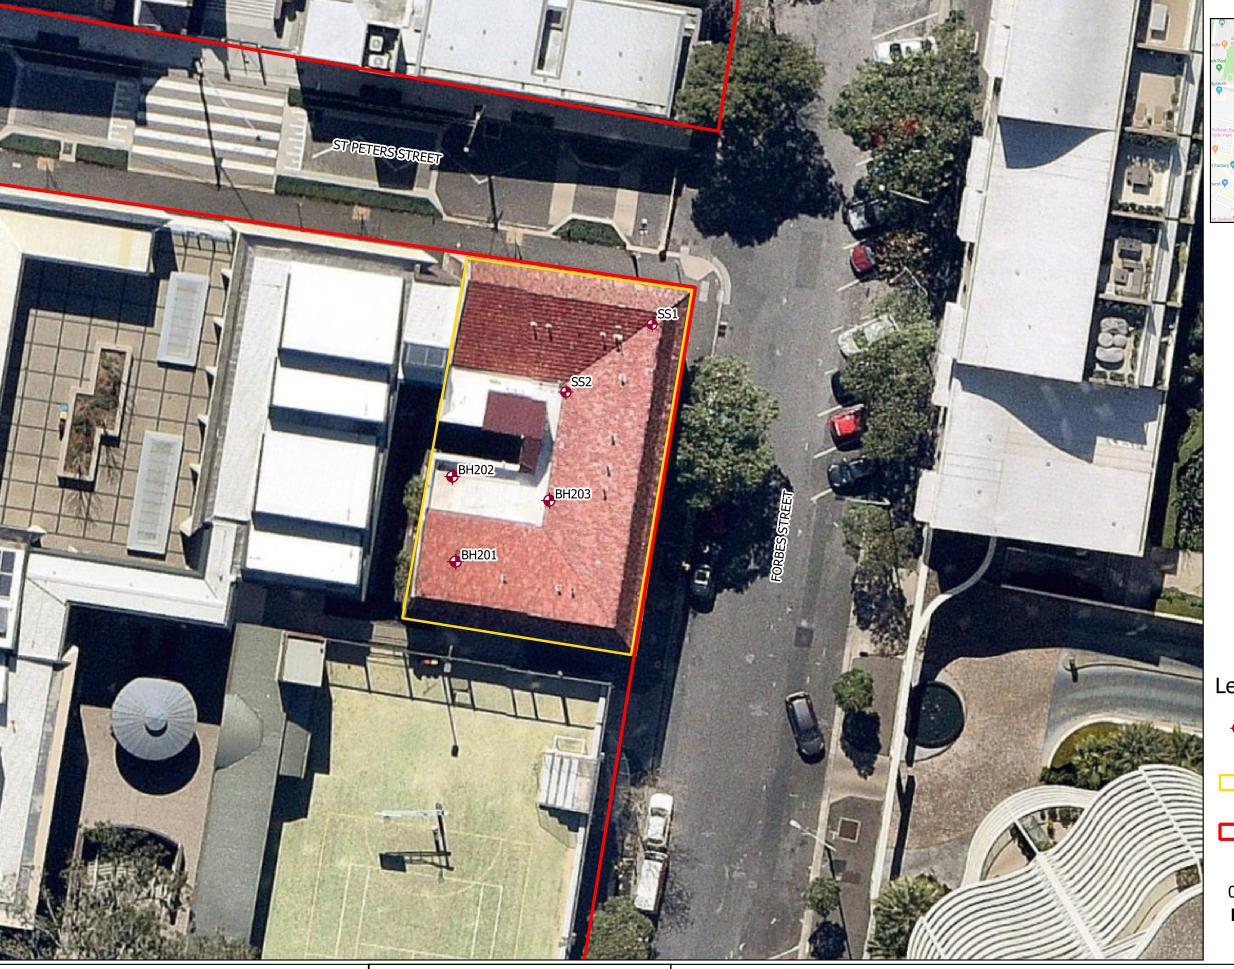

Site Inspection

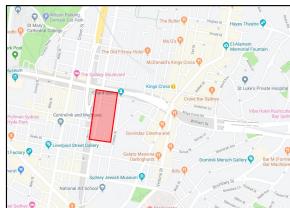

The company will always be pleased to provide engineering inspection services for geotechnical and environmental aspects of work to which this report is related. This could range from a site visit to confirm that conditions exposed are as expected, to full time engineering presence on site.

Location Confidences

Where Lotsearch has had to georeference features from supplied addresses, a location confidence has been assigned to the data record. This indicates a confidence to the positional accuracy of the feature. Where applicable, a code is given under the field heading "LC" or "LocConf". These codes lookup to the following location confidences:

LC Code	Location Confidence
1	Georeferenced to the site location / premise or part of site
2	Georeferenced with the confidence of the general/approximate area
3	Georeferenced to the road or rail
4	Georeferenced to the road intersection
5	Feature is a buffered point
6	Land adjacent to Georeferenced Site
7	Georeferenced to a network of features

Contaminated Land & Waste Management Facilities

Contaminated Land & Waste Management Facilities

SCEGGS Darlinghurst, 215 Forbes Street, Darlinghurst, NSW 2010

List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist (m)	Direction
372	Proposed Retail Unit	139-155 Palmer Street	Darlinghurst	Unclassified	Regulation under CLM Act not required	Current EPA List	Premise Match	101m	North West
13427	Cross City Tunnel	Riley Street and William Street	Darlinghurst	Service Station	Contamination was addressed via the planning process (EP&A Act)	Current EPA List	Road Intersection	187m	North West
1485	Former BP Service Station	2 Dowley Street	Woolloomooloo	Service Station	Contamination being managed via the planning process (EP&A Act)	Current EPA List	Premise Match	672m	North East
1026	7-Eleven Service Station	59 Oxford Street	Paddington	Service Station	Contamination currently regulated under CLM Act	Current EPA List	Premise Match	698m	South
1252	Ausgrid Road Reserve	Mary Street	Surry Hills	Other Industry	Regulation under CLM Act not required	Current EPA List	Road Match	775m	South West
13528	18-28 Neild Avenue, Darlinghurst	18-28 Neild Avenue	DARLINGHUR ST	Landfill	Regulation under CLM Act not required	Current EPA List	Premise Match	835m	East

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.

EPA site management class	Explanation
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.

Atlas of Australian Soils

Soils

SCEGGS Darlinghurst, 215 Forbes Street, Darlinghurst, NSW 2010

Atlas of Australian Soils

Soil mapping units and Australian Soil Classification orders within the dataset buffer:

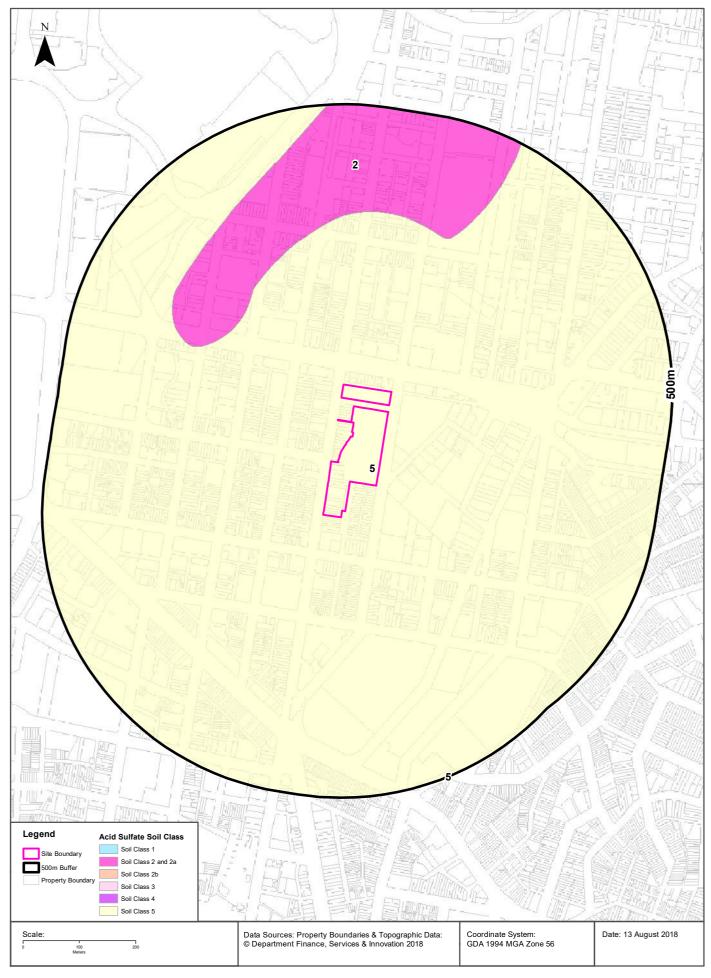

Map Unit Code	Soil Order	Map Unit Description	Distance
Tb35	Sodosol	Dissected plateau remnantsflat to undulating ridge tops with moderate to steep side slopes: chief soils are hard acidic yellow and yellow mottled soils (Dy3.41), (Dy2.21), and (Dy2.41) and hard acidic red soils (Dr2.21); many shallow profiles occur and profile thickness varies considerably over short distances. Associated are: (Gn3.54), (Gn3.14), and possibly other (Gn3) soils; (Db1.2) soils on some ridges; (Dy5.81) soils in areas transitional to unit Mb2; soils common to unit Mb2; and eroded lateritic remnants. Small areas of other soils are likely. Flat ferruginous shale or sandstone fragments are common on and/or in and/or below the soils of this unit.	0m
Mb2	Kandosol	Dissected sandstone plateau of moderate to strong relief with sandstone pillars, ledges, and slabs level to undulating ridges, irregularly benched slopes, steep ridges, cliffs, canyons, narrow sandy valleys: chief soils are (i) on areas of gentle to moderate relief, acid yellow leached earths (Gn2.74) and (Gn2.34) and acid leached yellow earths (Gn2.24)-sometimes these soils contain ironstone gravel; and (ii) on, or adjacent to, areas of strong relief, siliceous sands (Uc1.2), leached sands (Uc2.12) and (Uc2.2), and shallow forms of the above (Gn2) soils. Associated are: (i) on flat to gently undulating remnants of the original plateau surface, leached sands (Uc2.3), siliceous sands (Uc1.2), sandy earths (Uc5.22), and (Gn2) soils as for (i) above (these areas are in part comparable with unit Cb29); (ii) on flat ironstone gravelly remnants of the original plateau surface, (Gn2) soils as for unit Mb5(i); (iii) on gently undulating ridges where interbedded shales are exposed, shallow, often stony (Dy3.41), (Dr2.21), and related soils similar to unit Tb35; (iv) narrow valleys of (Uc2.3) soils flanked by moderate slopes of (Dy3.41) soils; (v) escarpments of steep hills with shallow (Dy) and (Dr) soils between sandstone pillars; and (vi) shallow (Um) soils, such as (Um6.21) on steep hills of basic rocks. As mapped, minor areas of units Mg20, Mm1, and Mw8 are included. Data are limited.	49m

Acid Sulfate Soils

Acid Sulfate Soils

SCEGGS Darlinghurst, 215 Forbes Street, Darlinghurst, NSW 2010

Standard Local Environmental Plan Acid Sulfate Soils

What is the on-site Acid Sulfate Soil Plan Class that presents the largest environmental risk?

Soil Class	Description	LEP
5	Works within 500 metres of adjacent Class 1, 2, 3, or 4 land that is below 5 metres AHD and by which the watertable is likely to be lowered below 1 metre AHD on adjacent Class 1, 2, 3 or 4 land, present an environmental risk	Sydney Local Environmental Plan 2012

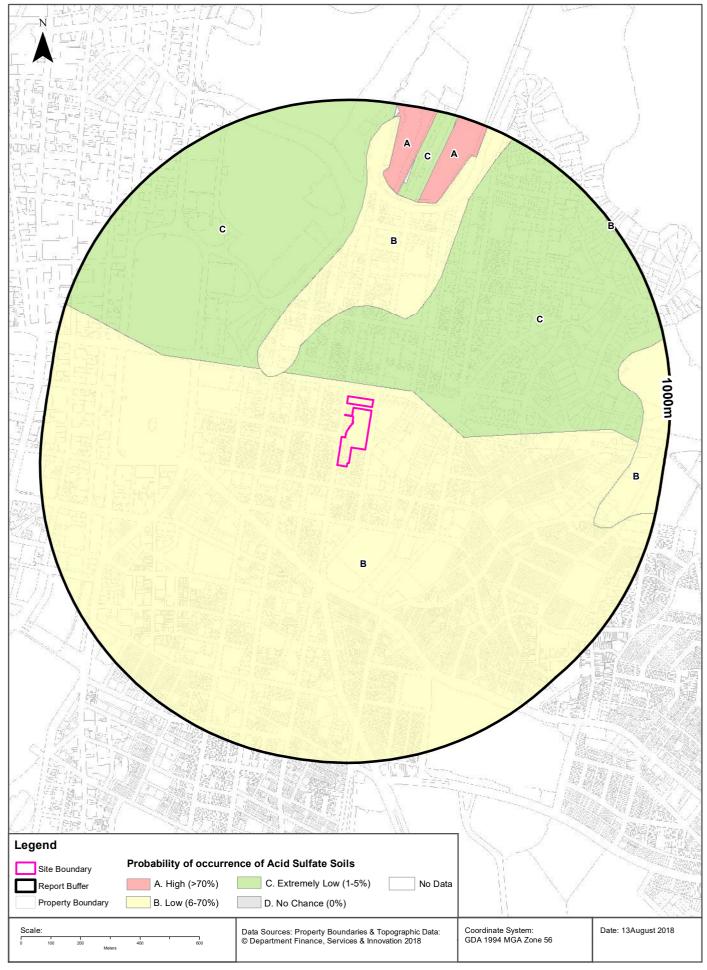

If the on-site Soil Class is 5, what other soil classes exist within 500m?

Soil Class	Description	LEP	Distance	Direction
2	Works below natural ground surface present an environmental risk; Works by which the watertable is likely to be lowered present an environmental risk	Sydney Local Environmental Plan 2012	217m	North

Local Environmental Plan

SCEGGS Darlinghurst, 215 Forbes Street, Darlinghurst, NSW 2010

Minimum Subdivision Lot Size

What are the onsite Local Environmental Plan Minimum Subdivision Lot Sizes?

Symbol	Minimum Lot Size	LEP or SEPP	Published Date	Commenced Date	Currency Date	Amendment	Percentage of Site Area
No Data							

Maximum Height of Building

What are the onsite Local Environmental Plan Maximum Height of Buildings?

Symbol	Maximum Height of Building	LEP or SEPP	Published Date	Commenced Date	Currency Date	Amendment	Percentage of Site Area
15	15.00 m	Sydney Local Environmental Plan 2012	14/12/2012	14/12/2012	22/12/2017		93.7
13	12.00 m	Sydney Local Environmental Plan 2012	14/12/2012	14/12/2012	22/12/2017		3
16	18.00 m	Sydney Local Environmental Plan 2012	14/12/2012	14/12/2012	22/12/2017		1.4

Floor Space Ratio

What are the onsite Local Environmental Plan Floor Space Ratios?

Symbol	Floor Space Ratio	LEP or SEPP	Published Date	Commenced Date	Currency Date	Amendment	Percentage of Site Area
67	1.50	LEP	14/12/2012	14/12/2012	24/02/2017		74.3
20	2.00	LEP	14/12/2012	14/12/2012	24/02/2017		20.8
68	1.75	LEP	14/12/2012	14/12/2012	24/02/2017		4.7

Land Application

What are the onsite Local Environmental Plan Land Applications?

Application Type	LEP or SEPP	Published Date	Commenced Date	Currency Date	Amendment	Percentage of Site Area
Included	Sydney Local Environmental Plan 2012	18/09/2015	18/09/2015	18/09/2015	Amendment No 23	100

Land Reservation Acquisition

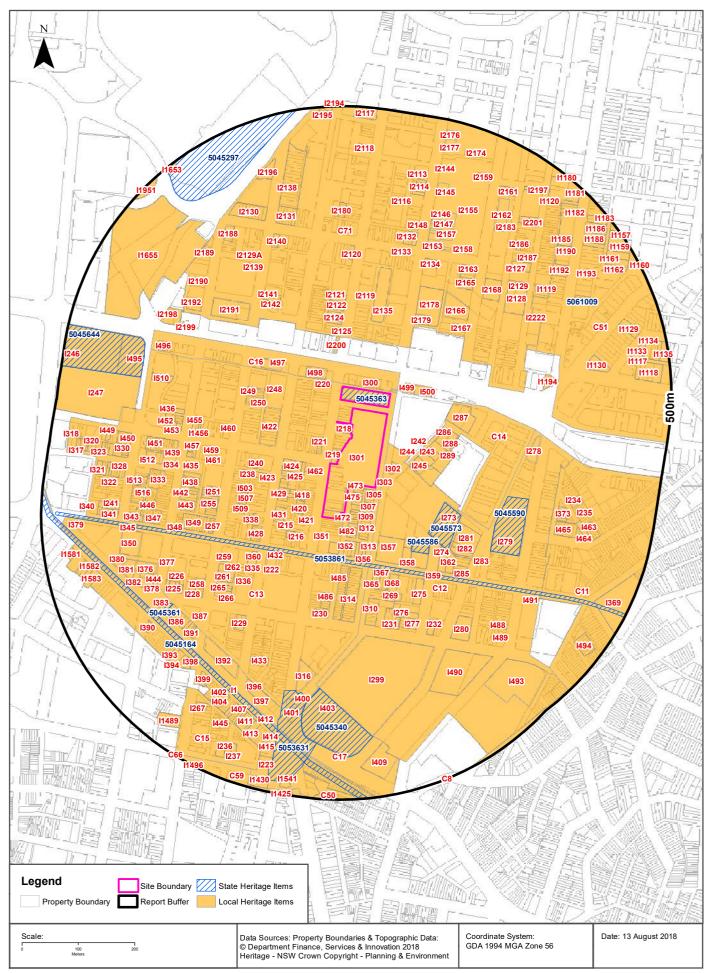

What are the onsite Local Environmental Plan Land Reservation Acquisitions?

Reservation	LEP	Published Date	Commenced Date	Currency Date	Amendment	Comments	Percentage of Site Area
No Data

USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report (Terms). The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

- 1. End User acknowledges and agrees that:
 - (a) the Report is compiled from or using content (Third Party Content) which is comprised of:
 - content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available or methodologies licensed to Lotsearch by third parties with whom Lotsearch has contractual arrangements (Third Party Content Suppliers); and
 - (ii) content which is derived from content described in paragraph (i);
 - (b) Neither Lotsearch nor Third Party Content Suppliers takes any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report including any contaminated land assessment or other assessment included as part of a Report;
 - (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**) and accordingly neither Lotsearch nor Third Party Content Suppliers gives any warranty in relation to the accuracy or completeness of the Third Party Content incorporated into the report including any contaminated land assessment or other assessment included as part of a Report;
 - (d) Reports are generated at a point in time (as specified by the date/time stamp appearing on the Report) and accordingly the Report is based on the information available at that point in time and Lotsearch is not obliged to undertake any additional reporting to take into consideration any information that may become available between the point in time specified by the date/time stamp and the date on which the Report was provided by Lotsearch to the purchaser of the Report;
 - (e) Reports must be used or reproduced in their entirety and End User must not reproduce or make available to other persons only parts of the Report;
 - (f) Lotsearch has not undertaken any physical inspection of the property;
 - neither Lotsearch nor Third Party Content Suppliers warrants that all land uses or features whether past or current are identified in the Report;
 - (h) the Report does not include any information relating to the actual state or condition of the Property;
 - (i) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of Land or Property for any particular purpose
 - the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
 - the End User should undertake its own inspections of the Land or Property to satisfy itself that there are no defects or failures
- 2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
- 3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
- 4. The End User hereby to the maximum extent permitted by law:
 - (a) acknowledges that the Lotsearch (nor any of its officers, employees or agents), nor any of its Third Party Content Supplier have any liability to it under or in connection with the

- Report or these Terms;
- (b) waives any right it may have to claim against Third Party Content Supplier in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms; and
- (c) releases each Third Party Content Supplier from any claim it may have otherwise had in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms.
- 5. The End User acknowledges that any Third Party Supplier shall be entitled to plead the benefits conferred on it under clause 4, despite not being a party to these terms.
- 6. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
- 7. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
- 8. To the extent permitted by law and subject to paragraph 9, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these Terms other than as expressly set out in these Terms are excluded.
- 9. Subject to paragraph 6, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
- 10. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
- 11. Subject to paragraph 9, neither Lotsearch nor the End User is liable to the other for:
 - any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to the Report or these Terms; or
 - (b) any loss of profit, loss of revenue, loss of interest, loss of data, loss of goodwill or loss of business opportunities, business interruption arising directly or indirectly out of or in relation to the Report or these Terms,

irrespective of how that liability arises including in contract or tort, liability under indemnity or for any other common law, equitable or statutory cause of action or otherwise.

12. These Terms are subject to New South Wales law.

PLANNING CERTIFICATE UNDER SECTION 10.7 (2) OF THE ENVIRONMENTAL PLANNING AND ASSESSMENT ACT, 1979

MATTERS AFFECTING THE LAND AS PRESCRIBED BY SCHEDULE 4 - ENVIRONMENTAL PLANNING & ASSESSMENT REGULATION, 2000, CLAUSES (1) - (2).

DEVELOPMENT CONTROLS

The following information must be read in conjunction with and subject to all other provisions of the environmental planning instruments specified in this certificate.

ZONING

Zone R1 General Residential (Sydney Local Environmental Plan 2012)

- 1 Objectives of zone
- To provide for the housing needs of the community.
- To provide for a variety of housing types and densities.
- To enable other land uses that provide facilities or services to meet the day to day needs of residents.
- •To maintain the existing land use pattern of predominantly residential uses...

2 Permitted without consent Home occupations

3 Permitted with consent

Attached dwellings; Bed and breakfast accommodation; Boarding houses; Child care centres; Community facilities; Dwelling houses; Food and drink premises; Group homes; Home industries; Horticulture; Hostels; Multi dwelling housing; Neighbourhood shops; Places of public worship; Residential flat buildings; Respite day care centres; Roads; Roadside stalls; Semi-detached dwellings; Seniors housing; Shop top housing; shops; Any other development not specified in item 2 or 4

4 Prohibited

Agriculture; Air transport facilities; Airstrips; Amusement centres; Animal boarding or training establishments; Boat launching ramps; Boat building and repair facilities; Camping grounds; Car parks; Caravan parks; Charter and tourism boating facilities; Commercial premises; Crematoria; Depots; Eco-tourist facilities; Entertainment facilities; Environmental protection works; Exhibition villages; Extractive industries; Farm buildings; Forestry; Freight transport facilities; Function centres; Heavy industrial storage establishments; Helipads; Highway service centres; Industrial retail outlets; Industries; Mooring pens; Moorings; Mortuaries; Passenger transport facilities; Port facilities; Recreation facilities (major); Recreation facilities(outdoor); Registered clubs; Research stations; Restricted premises; Rural industries; Rural supplies; Service stations; Sewerage systems; Sex services premises; Storage premises; Tourist and visitor accommodation; Transport depots; Truck depots; Vehicle body repair workshops; Vehicle repair stations; Veterinary hospitals; Warehouse or distribution centres; Waste or resource management facilities; Water recreation structures; Water supply systems; Wholesale supplies

PROPOSED ZONING

This property is not affected by a draft zone.

LOCAL PLANNING CONTROLS

Sydney Local Environmental Plan 2012 (as amended) – Published 14 December 2012 NSW Legislation Website.

Sydney Development Control Plan 2012 (as amended) - (commenced 14.12.2012)

Planning Proposal Serviced Apartments: Amendment of the following Local Environmental Plans.

- Sydney Local Environmental Plan 2012;
- Sydney Local Environmental Plan 2005;
- Sydney Local Environmental Plan (Green Square Town Centre) 2013; and
- Sydney Local Environmental Plan (Green Square Town Centre Stage 2) 2013.

This Planning Proposal explains the intent of, and justification for the proposed amendment to ensure State Environmental Planning Policy No. 65 (SEPP 65) and the Apartment Design Guide provisions apply to serviced apartments.

HERITAGE

Conservation Area

(Sydney Local Environmental Plan 2012)

This property has been identified as land within a Heritage Conservation Area.

Item of Environmental Heritage

(Sydney Local Environmental Plan 2012)

This property has been listed as an Item of Environmental Heritage

State Heritage Register (Amendment To Heritage Act, 1977 Gazetted 2/4/99)

This property may be identified as being of state heritage significance, and entered on the State Heritage Register.

To confirm whether the site is listed under the Heritage Act 1977 a Section 167 Certificate should be obtained from the NSW Heritage Office by contacting the NSW Heritage office on (02) 9873 8500 for an application from or by downloading the application form from www.heritage.nsw.gov.au

STATE PLANNING INSTRUMENTS

Full copies of State Environmental Planning Policies are available online at www.planning.nsw.gov.au.

State Environmental Planning Policy No. 19 - Bushland in Urban Areas

This is a policy to protect and preserve bushland within certain urban areas, as part of the natural heritage or for recreational, educational and scientific purposes. This policy is designed to protect bushland in public open space zones and reservations, and to ensure that bush preservation is given a high priority when local environmental plans for urban development are prepared.

State Environmental Planning Policy No. 32 – Urban Consolidation

This policy implements the principles of urban consolidation, including the orderly, economic use and development of land. The policy enables urban land which is no longer required for the purpose for which it is currently zoned or used to be redeveloped for multi-unit housing and related development.

State Environmental Planning Policy No. 33 – Hazardous and Offensive DevelopmentThis policy aims to amend the definitions of hazardous and offensive industries; to render ineffective any environmental planning instruments not defining hazardous or offensive as per this policy; to control development of hazardous and offensive industries.

State Environmental Planning Policy No. 55 - Remediation of Land

This policy provides planning controls for the remediation of contaminated land. The policy states that land must not be developed if it is unsuitable for a proposed use because it is contaminated. If the land is unsuitable, remediation must take place before the land is developed. The policy makes remediation permissible across the State, defines when consent is required, requires all remediation to comply with standards, ensures land is investigated if contamination is suspected, and requires councils to be notified of all remediation proposals. To assist councils and developers, the Department, in conjunction with the Environment Protection Authority, has prepared Managing Land Contamination: Planning Guidelines.

State Environmental Planning Policy No. 64 – Advertising and Signage

This policy aims to ensure that signage (including advertising): Is compatible with the desired amenity and visual character of an area, and

- Provides effective communications in suitable locations, and
- Is of a high quality design and finish.

To this end the policy regulates signage (but not content) under Part 4 of the Act and provides limited time consents for the display of certain advertisements. The policy does not apply to signage that is exempt development under an environmental planning instrument. It does apply to all signage that can be displayed with or without consent and is visible from any public place or reserve, except as provided by the policy.

This policy should be read in conjunction with the Sydney Local Environmental Plan 2005, the City of Sydney Signage and Advertising Structures Development Control Plan 2005 and State Environmental Planning Policy No. 60 where these apply.

State Environmental Planning Policy No. 65 - Design Quality of Residential Flat Buildings

This policy aims to improve the design quality of flats of three or more storeys with four or more self contained dwellings. The policy sets out a series of design principles for local councils to consider when assessing development proposals for residential flat development. The policy also creates a role for an independent design review panel and requires the involvement of a qualified designer in the design and approval process.

State Environmental Planning Policy No.70 – Affordable Housing (Revised Schemes) (Gazetted 31.05.02)

The policy identifies that there is a need for affordable housing in the City of Sydney, describes the kinds of households for which affordable housing may be provided and makes a requirement with respect to the imposition of conditions relating to the provision of affordable housing (provided other requirements under the Act are met).

State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004

This Policy does not apply to land described in Schedule 1 (Environmentally sensitive land), or land that is zoned for industrial purposes, or land to which an interim heritage order made under the *Heritage Act 1997* by the Minister administering that Act applies, or land to which a listing on the State Heritage Register kept under the *Heritage Act 1997* applies.

The Policy aims to encourage the provision of housing (including residential care facilities) that will increase the supply and diversity of residences that meet the needs of seniors or people with a disability, and make efficient use of existing infrastructure and services, and be of good design.

State Environmental Planning Policy (Building Sustainability Index: BASIX) 2004

Aims to ensure consistency in the implementation of the BASIX scheme throughout the State. This Policy achieves its aim by overriding provisions of other environmental planning instruments and development control plans that would otherwise add to, subtract from or modify any obligations arising under the BASIX scheme.

State Environmental Planning Policy (State Significant Precincts) 2005

This Policy aims to identify development of economic, social or environmental significance to the State or regions of the State so as to provide a consistent and comprehensive assessment and decision making process for that development.

NB: This SEPP also contains exempt & complying provisions

State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007

This Policy aims to provide for the proper management and development of mineral, petroleum and extractive material resources for the social and economic welfare of the State.

State Environmental Planning Policy (Temporary Structures and Places of Public Entertainment) 2007

This Policy aims to ensure that suitable provision is made for ensuring the safety of persons using temporary structures or places of public entertainment.

State Environmental Planning Policy (Infrastructure) 2007

This Policy aims to facilitate the effective delivery of infrastructure across the state.

NB: This SEPP also contains exempt & complying provisions

State Environmental Planning Policy (Repeal of Concurrence and Referral Provisions) 2008

This Policy is an 'amending instrument' that removes or modifies referral and concurrence clauses within local environmental plans (LEPs), regional environmental plans (REPs) and State environmental planning policies (SEPPs).

State Environmental Planning Policy (Exempt and Complying Development Codes) 2008

This Policy Streamlines assessment processes for development that complies with specified development standards. The policy provides exempt and complying development codes that have State-wide application, identifying, in the General Exempt Development Code, types of development that are of minimal environmental impact that may be carried out without the need for development consent; and, in the General Housing Code, types of complying development that may be carried out in accordance with a complying development certificate as defined in the Environmental Planning and Assessment Act 1979.

State Environmental Planning Policy (Affordable Rental Housing) 2009

Establishes a consistent planning regime for the provision of affordable rental housing. The policy provides incentives for new affordable rental housing, facilitates the retention of existing affordable rentals, and expands the role of not-for-profit providers. It also aims to support local centres by providing housing for workers close to places of work, and facilitate development of housing for the homeless and other disadvantaged people. NOTE: Does not apply to land at Green Square or at Ultimo Pyrmont, or on southern employment land.

State Environmental Planning Policy (Urban Renewal) 2010

The aims of this Policy are as follows:

- (a) to establish the process for assessing and identifying sites as urban renewal precincts,
- (b) to facilitate the orderly and economic development and redevelopment of sites in and around urban renewal precincts,
- (c) to facilitate delivery of the objectives of any applicable government State, regional or metropolitan strategies connected with the renewal of urban areas that are accessible by public transport.

State Environmental Planning Policy (State and Regional Development) 2011

The aims of this Policy are as follows:

- (a) to identify development that is State significant development,
- (b) to identify development that is State significant infrastructure and critical State significant infrastructure.
- (c) to confer functions on joint regional planning panels to determine development applications.

State Environmental Planning Policy (Vegetation in Non-Rural Areas) 2017

The aims of this Policy are:

- (a) to protect the biodiversity values of trees and other vegetation in non-rural areas of the State, and
- (b) to preserve the amenity of non-rural areas of the State through the preservation of trees and other vegetation.

State Environmental Planning Policy (Educational Establishments and Child Care Facilities) 2017

The aim of this Policy is to facilitate the effective delivery of educational establishments and early education and care facilities across the state.

State Environmental Planning Policy (Coastal Management) 2018

The aim of this Policy is to promote an integrated and co-ordinated approach to land use planning in the coastal zone in a manner consistent with the objects of the Coastal

Management Act 2016, including the management objectives for each coastal management area, by:

- (a) managing development in the coastal zone and protecting the environmental assets of the coast, and
- (b) establishing a framework for land use planning to guide decision-making in the coastal zone, and
- (c) mapping the 4 coastal management areas that comprise the NSW coastal zone for the purpose of the definitions in the <u>Coastal Management Act 2016</u>.

Sydney Regional Environmental Plan (Sydney Harbour Catchment) 2005

This plan applies to land within the Sydney Harbour Catchment, as shown edged heavy black on the Sydney Harbour Catchment Map, being part of the Sydney Region declared by order published in Gazette No 38 of 7 April 1989 at page 1841.

This plan has the following aims with respect to the Sydney Harbour Catchment: to ensure that the catchment, foreshores, waterways and islands of Sydney Harbour are recognised, protected and maintained: as outstanding natural asset, and as a public asset of national and heritage significance, for existing and future generations; to ensure a healthy, sustainable environment on land and water; to achieve a high quality urban environment; to ensure a prosperous working waterfront and an effective transport corridor, to encourage a culturally rich and vibrant place for people; to ensure accessibility to and along Sydney Harbour and its foreshores; to ensure the protection, maintenance and rehabilitation of watercourses, wetlands, riparian lands, remnant vegetation and ecological connectivity, to provide a consolidated, simplified and updated legislative framework for future planning.

OTHER MATTERS AFFECTING THE LAND AS PRESCRIBED BY SCHEDULE 4 - E. P. & A. REGULATION, 2000. CLAUSES (3) - (10)

(3) Complying Development

- (1) The extent to which the land is land on which complying development may be carried out under each of the codes for complying development because of the provisions of clauses 1.17A (1) (c) to (e), (2), (3) and (4),1.18(1)(c3) and 1.19 of State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.
- (2) The extent to which complying development may not be carried out on that land because of the provisions of clauses 1.17A (1) (c) to (e), (2), (3) and (4),1.18(1)(c3) and 1.19 of that Policy and the reasons why it may not be carried out under those clauses.
- (3) If the council does not have sufficient information to ascertain the extent to which complying development may or may not be carried out on the land, a statement that a restriction applies to the land, but it may not apply to all of the land, and that council does not have sufficient information to ascertain the extent to which complying development may or may not be carried out on the land.

Note: All Exempt and Complying Development Codes: Council does not have sufficient information to ascertain the extent of a land based exclusion on a property. Despite any statement preventing the carrying out of complying development in the Codes listed below, complying development may still be carried out providing the development is not on the land affected by the exclusion and meets the requirements and standards of *State Environmental Planning Policy (Exempt and Complying Development Codes) 2008.*

General Housing Code & Commercial and Industrial (New Buildings and Additions) Code

Complying development **may not** be carried out on the land under the General Housing Code & the Commercial and Industrial (New Buildings and Additions) Code if because of the provisions of clause 1.17A, 1.18(1)(c3) & 1.19 (Land-based requirements for exempt and complying development) any of the following statements are **YES**

	inplying development, any or the leneving statements are 120	
•	Clause 1.19(5)d. Land that is significantly contaminated land within the meaning of the Contaminated Land Management Act 1997. (Applies only to the Commercial and Industrial (New Buildings and Additions) Code.	NO
•	Clause 1.17A(d). Has been identified as a property that comprises, or on which there is, an item that is listed on the State Heritage Register under the <i>Heritage Act 1977</i> or that is subject to an interim heritage order under the <i>Heritage Act 1977</i> .	NO
•	Clause 1.17A(d) & 1.18(1)(c3). Has been identified as a property that comprises, or on which there is, a heritage item or draft heritage item.	YES
•	Clause 1.17A(c). Has been identified as being within a wilderness area (identified under the <i>Wilderness Act 1987</i> .	NO
•	Clause 1.17A(e) & 1.19(1)e or 1.19(5)f. Has been identified as land that is within an environmentally sensitive area or by an environmental planning instrument as being within a buffer area, a river front area, an ecologically sensitive area, environmentally sensitive land or a protected area	NO
•	Clause 1.19(1)a.or 1.19(5)a Has been identified as being within a heritage conservation area or a draft heritage conservation area.	YES
•	Clause 1.19(1)b or 1.19(5)b. Has been identified as being land that is reserved for a public purpose in an environmental planning instrument.	NO
•	Clause 1.19(1)c or 1.19(5)c. Has been identified as being on an Acid Sulfate Soils Map as being Class 1 or Class 2.	NO
•	Clause 1.19(1)d or 1.19(5)e. Has been identified as land that is subject to a biobanking agreement under part 7A of the threatened Species Conservation Act 1995 or a property vegetation plan under the Native Vegetation Act 2003.	NO
•	Clause 1.19(1)f or 1.19(5)g. Has been identified by an environmental planning instrument, a development control plan or a policy adopted by the Council as being or affected by a coastline hazard, a coastal hazard or a coastal erosion hazard.	NO
•	Clause 1.19(1)g or 1.19(5)h. Has been identified as being land in a foreshore area.	NO
•	Clause 1.19(1)h. Has been identified as land that is in the 25 ANEF contour or a higher ANEF contour. (Applies only to the General Housing Code)	NO
•	Clause 1.19(1)j or 1.19(5)i. Has been identified as unsewered land within a drinking water catchment.	NO
	Clause 1.19(1)i. Has been identified as land that is declared to be a special area under the Sydney Water Catchment Management Act 1998.	NO

Housing Alterations Code

Complying development under the Housing Alterations Code **may not** be carried out on the land.

Reason why:

Refer to 1.17A & 1.18 (1) (c3) State Environmental Planning Policy (Except and Complying Development Codes) 2008:

clause 1.17A(d) or 1.18 (1) (c3) applies

Commercial and Industrial Alterations Code

Complying development under the Commercial and Industrial Alterations Code **may not** be carried out on the land.

Reason why:

Refer to 1.17A & 1.18 (1) (c3) State Environmental Planning Policy (Except and Complying Development Codes) 2008:

clause 1.17A(d) or 1.18 (1) (c3) applies

Subdivisions Code

Complying development under the Subdivisions Code may not be carried out on the land.

Reason why:

Refer to 1.17A & 1.18 (1) (c3) State Environmental Planning Policy (Except and Complying Development Codes) 2008:

clause 1.17A(d) or 1.18 (1) (c3)applies

Rural Housing Code

The Rural Housing Code does not apply to this Local Government Area.

General Development Code

Complying development under the General Development Code **may not** be carried out on the land.

Reason why:

Refer to 1.17A & 1.18 (1) (c3) State Environmental Planning Policy (Except and Complying Development Codes) 2008:

clause 1.17A(d) or 1.18 (1) (c3) applies

Demolition Code

Complying development under the Demolition Code may not be carried out on the land.

Reason why:

Refer to 1.17A & 1.18 (1) (c3) State Environmental Planning Policy (Except and Complying Development Codes) 2008:

clause 1.17A(d) or 1.18 (1) (c3) applies

Low Rise Medium Density Housing Code

This Code has been deferred until 1 July 2019.

(4) Coastal Protection Act, 1979

The council has not been notified by the department of public works that the land is affected by the operation of section 38 or 39 of the coastal protection act, 1979.

(4A) Certain information relating to beaches and coasts

- (1) In relation to a coastal council an order has **not** been made under Part 4D of the coastal Protection Act 1979 in relation to temporary coastal protection works (within the meaning of that Act) on the land (or on public land adjacent to that land).
- (2) In relation to a coastal council: Council has **not** been notified under section 55X of the Coastal Protection Act 1979 that temporary coastal protection works (within the meaning of that Act) have been placed on the land (or on public land adjacent to that land)
- (4B) Annual charges under Local Government Act 1993 for coastal protection services that relate to existing coastal protection works

In relation to a coastal council: The owner (or any previous owner) of the land has not consented in writing to the land being subject to annual charges under section 496B of the Local Government Act 1993 for coastal protection services that relate to existing coastal protection works (within the meaning of section 553B of that Act).

Note. "Existing coastal protection works" are works to reduce the impact of coastal hazards on land (such as seawalls, revetments, groynes and beach nourishment) that existed before the commencement of section 553B of the Local Government Act 1993.

(5) Mine Subsidence District

This land has not been proclaimed to be a mine subsidence district within the meaning of section 15 of the mine subsidence compensation act, 1961.

(6) Road Widening and/or Road Realignment affected by (a) Division 2 of Part 3 of the Roads act 1993 or (c) any resolution of council or other authority.

This land **is not** affected by road widening and/or road realignment under section 25 of the Roads Act, 1993 and/or resolution of Council or any other authority.

(6) Road Widening and/or Road Realignment Affected by (b) any environmental planning instrument.

This land **is not** affected by any road widening or road realignment under any planning instrument.

(7) Council and other public authorities policies on hazard risk restrictions:

- (a) The land **is not** affected by a policy adopted by the Council that that restricts the development of the land because of the likelihood of land slip, bushfire, flooding, tidal inundation, subsidence, acid sulphate soils or any other risk; and
- (b) The land **is not** affected by a policy adopted by any other public authority and notified to the council for the express purpose of its adoption by that authority being referred to on planning certificate issued by Council, that restricts the development of the land because of the likelihood of land slip, bushfire, flooding, tidal inundation, subsidence, acid sulphate soils or any other risk.

(7A) Flood related development controls information.

The development on this land or part of this land is subject to flood related development controls refer to Clause 7.15 of Sydney Local Environment Plan 2012 and Section 3.7 of Sydney Development Control Plan 2012.

(8) Land reserved for acquisition

No environmental planning instrument, or proposed environmental planning instrument applying to the land, provides for the acquisition of the land by a public authority, as referred to in section 3.15 of the Act.

(9) Contribution plans

The following Contributions Plans apply to properties within the City of Sydney local government area. Contributions plans marked **YES** may apply to this property:

•	Central Sydney Development Contributions Plan 2013 – in operation 9 th July 2013	NO
•	City of Sydney Development Contributions Plan 2015 – in operation 1st July 2016	YES
•	Redfern Waterloo Authority Contributions Plan 2006 – in operation 16 th May 2007	NO
•	Redfern Waterloo Authority Affordable Housing Contributions Plan – in operation 16 th May 2007	

(9A) Biodiversity certified land

The land has not been certified as biodiversity certified land.

(10) Biobanking Agreement

Council has not been notified of a biobanking agreement under Part 7A of the Threatened Species Conservation Act 1995.

(11) Bush fire prone land

The land has not been identified as Bush fire prone land.

(12) Property vegetation plans

Not Applicable.

(13) Orders under Trees (Disputes Between Neighbours) Act 2006

Council has not been notified of an order which as been made under the *Trees (Disputes Between Neighbours) Act 2006* to carry out work in relation to a tree on the land.

(14) Directions under Part 3A

Not Applicable.

(15) Site compatibility certificates and conditions for seniors housing

- (a) The land to which the certificate relates is not subject to a current site compatibility certificate (seniors housing), of which Council is aware, in respect of proposed development on the land.
- (b) The land to which the certificate relates is not subject to any condition of consent to a development application granted after 11 October 2007 required by State Environmental Planning Policy (Housing for Seniors or People with a Disability) 2004.

(16) Site compatibility certificates for infrastructure

The land to which the certificate relates is not subject to a valid site compatibility certificate (infrastructure), of which Council is aware, in respect of proposed development on the land.

(17) Site compatibility certificates and conditions for affordable rental housing

- (a) The land to which the certificate relates is not subject to a current site compatibility certificate (affordable rental housing), of which Council is aware, in respect of proposed development on the land.
- (b) The land to which the certificate relates is not subject to any terms of a kind referred to in clause 17(1) or 37(1) of State Environmental Planning Policy (Affordable Rental Housing) 2009 that have been imposed as a condition of consent to a development application in respect of the land.

(18) Paper subdivision information

Not Applicable.

(19) Site verification certificates

The land to which the certificate relates is not subject to a valid site verification certificate of which Council is aware.

(20) Loose-fill asbestos insulation

Not Applicable

(21) Affected building notices and building product rectification orders

(1)The land to which the certificate relates is not subject to any affected building notice of which Council is aware.

- (2) (a) The land to which the certificate relates is not subject to any building product rectification order of which Council is aware and has not been fully complied with.
- (b) The land to which the certificate relates is not subject to any notice of intention to make a building product rectification order of which Council is aware and is outstanding.
- (3) In this clause:

affected building notice has the same meaning as in Part 4 of the <u>Building Products (Safety)</u> Act 2017.

building product rectification order has the same meaning as in the <u>Building Products (Safety)</u> Act 2017.

Note. The following matters are prescribed by section 59 (2) of the <u>Contaminated Land Management Act 1997</u> as additional matters to be specified in a planning certificate:

- (a) The land to which the certificate relates **is not** declared to be **significantly contaminated land** within the meaning of that act as at the date when the certificate is issued.
- (b) The land to which the certificate relates **is not** subject to a **management order** within the meaning of that act as at the date when the certificate is issued.
- (c) The land to which the certificate relates **is not** the subject of an **approved voluntary management proposal** within the meaning of that act at the date the certificate is issued.
- (d) The land to which the certificate relates **is not** the subject of an **ongoing maintenance order** within the meaning of that act as at the date when the certificate is issued.
- (e) As at the date when the certificate is issued, Council **has not** identified that a **site audit statement** within the meaning of that act has been received in respect of the land the subject of the certificate.

PLANNING CERTIFICATE SECTION 10.7 (2) INFORMATION:

Information provided in accordance with planning certificate section 10.7 (2) has been taken from council's records and advice from other authorities but council disclaims all liability for any omission or inaccuracy in the information. Specific inquiry should be made where doubt exists.

PLANNING CERTIFICATE UNDER SECTION 10.7 (5) OF THE ENVIRONMENTAL PLANNING AND ASSESSMENT ACT, 1979

PLANNING CERTIFICATE SECTION 10.7 (5) ADVICE is current as at 12:00 noon two working days prior to the date of issue of this certificate. The following matters have been considered & details provided where information exists: easements in favour of council; parking permit scheme; heritage floor space restrictions; low-rental residential building; foreshore building line; tree preservation order.

Contaminated Land Potential:

Council records do not have sufficient information about the uses (including previous uses) of the land which is the subject of this section 10.7 certificate to confirm that the land has not been used for a purpose which would be likely to have contaminated the land. Parties should make their own enquiries as to whether the land may be contaminated.

Hazard Risk Restriction:

The City of Sydney Local Environmental Plan 2012 incorporates Acid Sulfate soil maps. Development on the land identified in those maps should have regard to Division 4 clause 7.16 of the LEP.

Construction Noise and View Loss Advice:

Intending purchasers are advised that the subject property may be affected by construction noise and loss or diminution of views as a result of surrounding development.

City of Sydney Tree Preservation Order 2004 (TPO)

This order applies to all land where South Sydney Local Environmental Plan 1998 applies and the City of Sydney Council or the Central Sydney Planning Committee is the relevant consent authority under the *Environmental Planning & Assessment* Act 1979. Contact Council's Contract and Asset Management section for more information.

Outstanding Notice & Order information

In relation to this property, there **is not** an outstanding Order or Notice of Intention to issue an Order relating to Fire Safety (being an Order or Notice of Intention to issue an Order of type 6, 10, 11 under Section 121B of the Environmental Planning and Assessment Act, 1979). Further information about the Order or Notice of Intention to issue an Order may be obtained by applying for a certificate under Section 121ZP of the Environmental Planning and Assessment Act and Section 735A of the Local Government Act.

In relation to this property, there **is not** an outstanding Order or Notice of Intention to issue an Order (being an Order or Notice of Intention to issue an Order of a type other than relating to fire safety). Further information about the Order or Notice of Intention to issue an Order may be obtained by applying for a certificate under Section 121ZP of the Environmental Planning and Assessment Act and Section 735A of the Local Government Act.

Residential & Visitor Parking Permit Schemes

The City of Sydney co-ordinates a Resident Permit Parking Scheme and a Visitor Permit Parking scheme. This property may be restricted from participating in either scheme. Eligibility may change after the date of this certificate, as parking supply and other traffic demands change. For more information contact Council's call centre on 9265 9333.

ADVICE FROM OTHER BODIES

Sydney Ports Corporation Advice

Some land in the City of Sydney located in the vicinity of the White Bay, Glebe Island and Darling Harbour ports may be affected by noise from port operations.

Advice provided in accordance with planning certificate section 10.7 (5) is supplied in good faith. Council accepts no liability for the validity of the advice given. (see section 10.7 (6) of the Environmental Planning and Assessment Act, 1979).

For information regarding outstanding notices and orders a CERTIFICATE FOR OUTSTANDING NOTICES OF INTENTION AND/OR AN ORDER UNDER SECTION 735A OF THE LOCAL GOVERNMENT ACT, 1993 AND SECTION 121ZP OF THE ENVIRONMENTAL PLANNING AND ASSESSMENT ACT, 1979 may be applied for at Sydney City Council.

Planning certificate section 10.7 (2), local planning controls are available are available online at www.cityofsydney.nsw.gov.au

Appendix E

Data Quality Assessment

DATA QUALITY ASSESSMENT

Q1. Data Quality Objectives

The Detailed Site Investigation (PSI) was prepared with reference to the seven step data quality objective (DQO) process which is provided in Appendix B, Schedule B2 of the *National Environment Protection (Assessment of Site Contamination) Measure* 1999 as amended 2013 (NEPC, 2013). The DQO process is outlined as follows:

- Stating the Problem;
- Identifying the Decision;
- Identifying Inputs to the Decision;
- Defining the Boundary of the Assessment;
- Developing a Decision Rule;
- Specifying Acceptable Limits on Decision Errors; and
- Optimising the Design for Obtaining Data.

The DQOs have been addressed within the report as shown in Table Q1.

Table Q1: Data Quality Objectives

Data Quality Objective	Report Section where Addressed			
State the Problem	S1 Introduction			
Identify the Decision	S1 Introduction (objective)			
	S13 Conclusions and Recommendations			
Identify Inputs to the Decision	S1 Introduction			
	S3 Site Identification and Location			
	S4 Review of Previous Reports			
	S5 Environmental setting			
	S6 Site History			
	S7 Preliminary Conceptual Site Model			
	S9 Site Assessment Criteria			
	S10 Field Work Results			
Define the Boundary of the Assessment	S3 Site Identification and Location			
	Drawing 1 - Appendix B			
Develop a Decision Rule	S9 Site Assessment Criteria			
Specify Acceptable Limits on Decision Errors	S8 Field Work Methods			
	S9 Site Assessment Criteria			
	QA/QC Procedures and Results – Sections Q2, Q3			
Optimise the Design for Obtaining Data	S2 Scope of Works			
	S8 Field Work Methods			
	QA/QC Procedures and Results – Sections Q2, Q3			

Q2. FIELD AND LABORATORY QUALITY CONTROL

The field and laboratory quality control (QC) procedures and results are summarised in Tables Q2 and Q3. Reference should be made to the fieldwork and analysis procedures in Section 8 and the laboratory results certificates in Appendix F for further details.

Table Q2: Field QC

Item	Frequency	Acceptance Criteria	Achievement
Intra-laboratory replicates	5% primary samples	RPD <30% inorganics), <50% (organics)	yes ¹
Trip Spikes	1 per field batch	60-140% recovery	yes
Trip Blanks	1 per field batch	<pql lor<="" td=""><td>yes</td></pql>	yes

NOTES:

qualitative assessment of RPD results overall; refer Section Q2.1

Table Q3: Laboratory QC

Item	Frequency	Acceptance Criteria	Achievement
Analytical laboratories used		NATA accreditation	yes
Holding times		In accordance with NEPC (2013) which references various Australian and international standards	yes
Laboratory / Reagent Blanks	1 per lab batch	<pql< td=""><td>yes</td></pql<>	yes
Laboratory duplicates	10% primary samples	Laboratory specific ¹	
Matrix Spikes	1 per lab batch	70-130% recovery (inorganics);	yes
		60-140% (organics);	
		10-140% (SVOC, speciated phenols)	
Surrogate Spikes	organics by GC	70-130% recovery (inorganics);	yes
		60-140% (organics);	
		10-140% (SVOC, speciated phenols)	
Control Samples	1 per lab batch	70-130% recovery (inorganics);	yes
		60-140% (organics);	
		10-140% (SVOC, speciated phenols)	

NOTES:

ELS: <5xPQL - any RPD; >5xPQL - 0-50%RPD

In summary, the QC data is considered to be of sufficient quality to be acceptable for the assessment.

Q2.1 Intra-Laboratory Replicates

Intra-laboratory replicates were analysed as an internal check of the reproducibility within the primary laboratory ELS and as a measure of consistency of sampling techniques. The comparative results of analysis between original and intra-laboratory replicate samples are summarised in Table E1 (attached).

Note that, where both samples are below LOR/PQL the difference and RPD has been given as zero. Where one sample is reported below LOR/PQL, but a concentration is reported for the other, the LOR/PQL value has been used for calculation of the RPD for the less than LOR/PQL sample.

The calculated RPD values were within the acceptable range of \pm 30 for inorganic analytes with the with the exception of those in bold. However, this is not considered to be significant because:

- The typically low actual differences in the concentrations of the replicate pairs where some RPD
 exceedances occurred. High RPD values reflect the small differences between two small
 numbers;
- The replicate pair being collected from fill soils which were heterogeneous in nature;
- Soil replicates, rather than homogenised soil duplicates, were used to minimise the risk of possible volatile loss, hence greater variability can be expected; and
- All other QA / QC parameters met the DQIs.

Overall, the intra-laboratory replicate comparisons indicate that the sampling techniques were generally consistent and repeatable.

Q3. Data Quality Indicators

The reliability of field procedures and analytical results was assessed against the following data quality indicators (DQIs):

- Completeness a measure of the amount of usable data from a data collection activity;
- Comparability the confidence (qualitative) that data may be considered to be equivalent for each sampling and analytical event;
- Representativeness the confidence (qualitative) of data representativeness of media present on-site;
- Precision a measure of variability or reproducibility of data; and
- Accuracy a measure of closeness of the data to the 'true' value.

The DQIs were assessed as outlined in the following Table Q4.

Table Q4: Data Quality Indicators

Data Quality Indicator	Method(s) of Achievement
Completeness	Planned systematic and selected target locations sampled;
	Preparation of material descriptions, sample location plan and chain of custody (COC) records;
	Laboratory sample receipt information received confirming receipt of samples intact and appropriateness of the chain of custody;
	Samples analysed for contaminants of potential concern (COPC) identified in the Conceptual Site Model (CSM);
	Completion of COC documentation;
	NATA endorsed laboratory certificates provided by the laboratory; and
	Satisfactory frequency and results for field and laboratory QC samples as discussed in Section Q2.
Comparability	Using appropriate techniques for sample recovery, storage and transportation, which were the same for the duration of the project;
	Works undertaken by appropriately experienced and trained DP environmental scientist / engineer;
	Use of NATA registered laboratory; and
	Satisfactory results for field and laboratory QC samples.
Representativeness	Target media sampled;
	Spatial and temporal distribution of sample locations;
	Sample numbers recovered and analysed are considered to be representative of the target media and complying with DQOs;
	Samples were extracted and analysed within holding times;
	Samples were analysed in accordance with the analysis request.
Precision	Acceptable RPD between original samples and replicates;
	Satisfactory results for all other field and laboratory QC samples.
Accuracy	Satisfactory results for all field and laboratory QC samples.

Based on the above, it is considered that the DQIs have been complied with. As such, it is concluded that the field and laboratory test data obtained are reliable and useable for this assessment.

Table E1: Relative Percentage Difference Results – Intra-laboratory Replicates

			Metals							
			Arsenic	Cadmium	Chromium (VI)	Copper	Lead	Mercury (inorganic)	Nickel	Zinc
Sample ID	Depth	Sampled Date	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg	mg/kg
BD1/20190723	0m	23/07/2019	<4	<0.4	4	1	51	<0.1	<1	66
SS1	0 - 0.05m	23/07/2019	<4	<0.4	5	3	99	0.2	<1	77
	•	Difference	0	0	1	2	48	0.1	0	11
		RPD	0%	0%	22%	100%	64%	67%	0%	15%

Method ID	Methodology Summary
ASB-001	Asbestos ID - Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Stainin Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Inorg-031	Total Phenolics by segmented flow analyser (in line distillation with colourimetric finish). Solids are extracted in a caustic media prior to analysis.
Metals-020	Determination of various metals by ICP-AES.
Metals-021	Determination of Mercury by Cold Vapour AAS.
Org-003	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables (3, 4)). Note Naphthalene is determined from the VOC analysis.
Org-003	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID.
	F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables (3, 4)). Note Naphthalene is determined from the VOC analysis.
	Note, the Total +ve TRH PQL is reflective of the lowest individual PQL and is therefore "Total +ve TRH" is simply a sum of positive individual TRH fractions (>C10-C40).
Org-005	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual ECD's.
Org-005	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual
	ECD's. Note, the Total +ve reported DDD+DDE+DDT PQL is reflective of the lowest individual PQL and is therefore simply a sum the positive individually report DDD+DDE+DDT.
Org-006	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD.
Org-006	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD. Note, the Total +ve PCBs PQL is reflective of the lowest individual PQL and is therefore" Total +ve PCBs" is simply a sum the positive individual PCBs.
Org-008	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual ECD's.

Method ID	Methodology Summary
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013. For soil results:- 1. 'EQ PQL'values are assuming all contributing PAHs reported as <pql 'eq="" 2.="" <pql="" actually="" all="" and="" approach="" are="" as="" assuming="" at="" be="" below="" but="" calculation="" can="" conservative="" contribute="" contributing="" false="" give="" given="" is="" least="" may="" more="" most="" negative="" not="" pahs="" positive="" pql.="" pql.<="" present="" present.="" reported="" susceptible="" td="" teq="" teqs="" that="" the="" this="" to="" when="" zero'values="" zero.=""></pql>
	3. 'EQ half PQL'values are assuming all contributing PAHs reported as <pql a="" above.<="" and="" approaches="" are="" between="" conservative="" half="" hence="" least="" mid-point="" most="" p="" pql.="" stipulated="" the=""> Note, the Total +ve PAHs PQL is reflective of the lowest individual PQL and is therefore "Total +ve PAHs" is simply a sum of the positive individual PAHs.</pql>
Org-014	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS.
Org-016	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.
Org-016	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater. Note, the Total +ve Xylene PQL is reflective of the lowest individual PQL and is therefore "Total +ve Xylenes" is simply a sum of the positive individual Xylenes.

Quality Control	ol Definitions
Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Report Comments

Asbestos: Excessive sample volumes were provided for asbestos analysis. A portion of the supplied samples were sub-sampled according to Envirolab procedures.

We cannot guarantee that these sub-samples are indicative of the entire sample.

Envirolab recommends supplying 40-50g (50mL) of sample in its own container as per AS4964-2004.

Note: Samples 222264-1, 3 & 4 were sub-sampled from bags provided by the client.

Asbestos: A portion of the supplied sample was sub-sampled for asbestos analysis according to Envirolab procedures.

We cannot guarantee that this sub-sample is indicative of the entire sample. Envirolab recommends supplying 40-50g of sample in its own container. Note: Sample 222264-6 was sub-sampled from a jar provided by the client.

OC's and PCB in Soil - The PQL has been raised due to interferences from analytes (other than those being tested) in samples 222264- 1,1d and 3.

CERTIFICATE OF ANALYSIS 222264-A

Client Details	
Client	Douglas Partners Pty Ltd
Attention	David Holden, Nicola Warton
Address	96 Hermitage Rd, West Ryde, NSW, 2114

Sample Details	
Your Reference	86514.02, Darlinghurst
Number of Samples	13 SOIL
Date samples received	23/07/2019
Date completed instructions received	26/07/2019

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details		
Date results requested by	31/07/2019	
Date of Issue	01/08/2019	
Reissue Details	This report replaces R00 created on 31/07/2019 due to: revised report with additional results. (client request)	
NATA Accreditation Number 2901. This document shall not be reproduced except in full.		
Accredited for compliance with ISO/IEC 17025 - Testing. Tests not covered by NATA are denoted with *		

Results Approved By

Method ID	Methodology Summary
EXTRACT.7	Toxicity Characteristic Leaching Procedure (TCLP) using Zero Headspace Extraction (zHE) using AS4439 and USEPA 1311.
Inorg-001	pH - Measured using pH meter and electrode in accordance with APHA latest edition, 4500-H+. Please note that the results for water analyses are indicative only, as analysis outside of the APHA storage times.
Inorg-004	Toxicity Characteristic Leaching Procedure (TCLP) using in house method INORG-004. Please note that the mass used may be scaled down from the default based on sample mass available.
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Metals-020	Determination of various metals by ICP-AES.
Metals-020 ICP-AES	Determination of various metals by ICP-AES.
Metals-021	Determination of Mercury by Cold Vapour AAS.
Metals-021 ASLP	Determination of Mercury by Cold Vapour AAS following neutral water leaching by AS 4439.3 - 1997.
Metals-021 CV-AAS	Determination of Mercury by Cold Vapour AAS.
Metals-022	Determination of various metals by ICP-MS following leaching using neutralised deionised water by AS 4439.3 - 1997.
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS.
Org-012	Leachates are extracted with Dichloromethane and analysed by GC-MS.
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013.
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013. For soil results:- 1. NR	Not Reported

Quality	Contro	ol Definitions
	Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
D	uplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matr	rix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Lat	•	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surroga	te Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

Envirolab Reference: 222264-A

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Report Comments

Metals-ASLP Neutral (ICP-MS): The laboratory RPD acceptance criteria has been exceeded for 222264-A-3 for Pb. Therefore a triplicate result has been issued as laboratory sample number 222264-A-14.

Metals in TCLP USEPA1311: A triplicate result has been issued as laboratory sample number 222264-A-14 for sample 222264-A-3 as requested by the client.

Subject: RE: Sample Receipt for 222264 86514.02, Darlinghurst

Hi Ellen,

Can you please schedule the following for this job:

■ BH201/0-0.1 - TCLP and ASLP for PAH

BH201/0-0.1 – TCLP for lead and ASLP for metals

BH202/0.3-0.4 -- TCLP and ASLP for PAH

BH202/0.3-0.4 – TCLP for lead and ASLP for metals

BH203/0-0.1 - TCLP for lead and ASLP for metals

As well as for sample BH201/0.3-0.4 (on hold), can you test for the following:

- PAH
- Metals
- TCLP lead and PAH
- ASLP metals and PAH

On a 72hr TAT please.

Thanks!

Nicola Warton | Environmental Scientist

Additional Info

Sample storage - Waters are routinely disposed of approximately 1 month and soils approximately 2 months from receipt.

Requests for longer term sample storage must be received in writing.

Please contact the laboratory immediately if observed settled sediment present in water samples is to be included in the extraction and/or analysis (exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS analysis where solids are included by default.

TAT for Micro is dependent on incubation. This varies from 3 to 6 days.

Quality Co	ontro	ol Definitions
E	Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Dupl	licate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix S	Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Labora Control Sar	•	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate S	Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC and/or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, total recoverable metals and PFAS where solids are included by default.

Hi Simon,

I have sent through an esky this arvo for job ref 86514.02.

In addition to the metals analysis, can you please also schedule TCLP for metals for the sample (SS1 fill 0-0.05)?

24hr TAT please.

Thanks,

Nicola Warton | Environmental Scientist

Hi Simon,						
For job 222748 86514.02, Darlir (222745-1).	nghurst, could I please get metals in ASLP analysed for sample SS1/0-0.05					
If possible could you please put	this on a 24 hr turnaround.					
Thanks						
Dave

CERTIFICATE OF ANALYSIS 202289

Client Details	
Client	Douglas Partners Pty Ltd
Attention	David Holden, Nicola Warton
Address	96 Hermitage Rd, West Ryde, NSW, 2114

Sample Details	
Your Reference	86514.00, Darlinghurst
Number of Samples	12 Soil, 2 Material
Date samples received	04/10/2018
Date completed instructions received	04/10/2018

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Please refer to the last page of this report for any comments relating to the results.

Report Details		
Date results requested by	11/10/2018	
Date of Issue	11/10/2018	
NATA Accreditation Number 2901	. This document shall not be reproduced except in full.	
Accredited for compliance with IS	O/IEC 17025 - Testing. Tests not covered by NATA are denoted with *

Method ID	Methodology Summary
ASB-001	Asbestos ID - Qualitative identification of asbestos in bulk samples using Polarised Light Microscopy and Dispersion Staining Techniques including Synthetic Mineral Fibre and Organic Fibre as per Australian Standard 4964-2004.
ASB-001	Asbestos ID - Identification of asbestos in soil samples using Polarised Light Microscopy and Dispersion Staining Techniques. Minimum 500mL soil sample was analysed as recommended by "National Environment Protection (Assessment of site contamination) Measure, Schedule B1 and "The Guidelines from the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia - May 2009" with a reporting limit of 0.1g/kg (0.01% w/w) as per Australian Standard AS4964-2004. Results reported denoted with * are outside our scope of NATA accreditation.
	NOTE #1 Total Asbestos g/kg was analysed and reported as per Australian Standard AS4964 (This is the sum of ACM >7mm, <7mm and FA/AF)
	NOTE #2 The screening level of 0.001% w/w asbestos in soil for FA and AF only applies where the FA and AF are able to be quantified by gravimetric procedures. This screening level is not applicable to free fibres.
	Estimation = Estimated asbestos weight
	Results reported with "" is equivalent to no visible asbestos identified using Polarised Light microscopy and Dispersion Staining Techniques.
Inorg-001	pH - Measured using pH meter and electrode in accordance with APHA latest edition, 4500-H+. Please note that the results for water analyses are indicative only, as analysis outside of the APHA storage times.
Inorg-008	Moisture content determined by heating at 105+/-5 °C for a minimum of 12 hours.
Inorg-031	Total Phenolics by segmented flow analyser (in line distillation with colourimetric finish). Solids are extracted in a caustic media prior to analysis.
Metals-009	Determination of exchangeable cations and cation exchange capacity in soils using 1M Ammonium Chloride exchange and ICP-AES analytical finish.
Metals-020	Determination of various metals by ICP-AES.
Metals-021	Determination of Mercury by Cold Vapour AAS.
Org-003	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID. F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.

Method ID	Methodology Summary
Org-003	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-FID.
	F2 = (>C10-C16)-Naphthalene as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater (HSLs Tables 1A (3, 4)). Note Naphthalene is determined from the VOC analysis.
	Note, the Total +ve TRH PQL is reflective of the lowest individual PQL and is therefore "Total +ve TRH" is simply a sum of the positive individual TRH fractions (>C10-C40).
Org-005	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual ECD's.
Org-005	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual
	ECD's. Note, the Total +ve reported DDD+DDE+DDT PQL is reflective of the lowest individual PQL and is therefore simply a sum of the positive individually report DDD+DDE+DDT.
Org-006	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD.
Org-006	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC-ECD. Note, the Total +ve PCBs PQL is reflective of the lowest individual PQL and is therefore" Total +ve PCBs" is simply a sum of the positive individual PCBs.
Org-008	Soil samples are extracted with dichloromethane/acetone and waters with dichloromethane and analysed by GC with dual ECD's.
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013. For soil results:- 1. 'EQ PQL'values are assuming all contributing PAHs reported as <pql "total="" 'eq="" +ve="" 2.="" 3.="" <pql="" a="" above.="" actually="" all="" and="" approach="" approaches="" are="" as="" assuming="" at="" be="" below="" between="" but="" calculation="" can="" conservative="" contribute="" contributing="" false="" give="" given="" half="" hence="" individual="" is="" least="" lowest="" may="" mid-point="" more="" most="" negative="" not="" note,="" of="" pahs="" pahs"="" pahs.<="" positive="" pql="" pql'values="" pql.="" present="" present.="" reflective="" reported="" simply="" stipulated="" sum="" susceptible="" teq="" teqs="" th="" that="" the="" therefore="" this="" to="" total="" when="" zero'values="" zero.=""></pql>
Org-014	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS.
Org-016	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater.
Org-016	Soil samples are extracted with methanol and spiked into water prior to analysing by purge and trap GC-MS. Water samples are analysed directly by purge and trap GC-MS. F1 = (C6-C10)-BTEX as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater. Note, the Total +ve Xylene PQL is reflective of the lowest individual PQL and is therefore "Total +ve Xylenes" is simply a sum of the positive individual Xylenes.

Quality Control	ol Definitions
Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.
Australian Drinking	Water Cuidelines recommend that Thermetelerant Californ, Escapi Entergages, 9 E Cali levels are less than

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

Laboratory Acceptance Criteria

Revision No:

R00

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Envirolab Reference: 202289 Page | 35 of 36

Report Comments

Asbestos: Excessive sample volume was provided for asbestos analysis. A portion of the supplied sample was sub-sampled according to Envirolab procedures. We cannot guarantee that this

sub-sample is indicative of the entire sample. Envirolab recommends supplying 500mL

of sample in it's own container.

Asbestos: Excessive sample volumes were provided for asbestos analysis. A portion of the supplied sample was sub-sampled according to Envirolab procedures. We cannot guarantee that this sub-sample is indicative of the entire sample. Envirolab recommends supplying 40-50g (50mL) of sample in its own container as per AS4964-2004.

Note: Samples requested for asbestos testing were sub-sampled from bags provided by the client.

Asbestos-ID in soil: NEPM

This report is consistent with the reporting recommendations in the National Environment Protection (Assessment of Site Contamination) Measure, Schedule B1, May 2013.

This is reported outside our scope of NATA accreditation.

Acid Extractable Metals in Soil: The laboratory RPD acceptance criteria has been exceeded for 202289-1 for Zn. Therefore a triplicate result has been issued as laboratory sample number 202289-15.

Acid Extractable Metals in Soil: The laboratory RPD acceptance criteria has been exceeded for 202289-11 for Cu, Pb and Zn. Therefore a triplicate result has been issued as laboratory sample number 202289-16.

PAHs in Soil - The RPD for duplicate results is accepted due to the non homogenous nature of the sample/s. - 11/11d

CERTIFICATE OF ANALYSIS 202289-A

Client Details	
Client	Douglas Partners Pty Ltd
Attention	David Holden, Nicola Warton
Address	96 Hermitage Rd, West Ryde, NSW, 2114

Sample Details	
Your Reference	86514.00, Darlinghurst
Number of Samples	12 Soil, 2 Material
Date samples received	04/10/2018
Date completed instructions received	12/10/2018

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.

Samples were analysed as received from the client. Results relate specifically to the samples as received.

Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details	
Date results requested by	19/10/2018
Date of Issue	19/10/2018
NATA Accreditation Number 2901	This document shall not be reproduced except in full.
Accredited for compliance with ISO	D/IEC 17025 - Testing. Tests not covered by NATA are denoted with *

Results Approved By

Jeremy Faircloth, Organics Supervisor Long Pham, Team Leader, Metals **Authorised By**

Jacinta Hurst, Laboratory Manager

Method ID	Methodology Summary
EXTRACT.7	Toxicity Characteristic Leaching Procedure (TCLP) using Zero Headspace Extraction (zHE) using AS4439 and USEPA 1311.
Inorg-001	pH - Measured using pH meter and electrode in accordance with APHA latest edition, 4500-H+. Please note that the results for water analyses are indicative only, as analysis outside of the APHA storage times.
Inorg-004	Toxicity Characteristic Leaching Procedure (TCLP) using in house method INORG-004.
Metals-020 ICP-AES	Determination of various metals by ICP-AES.
Metals-021 CV-AAS	Determination of Mercury by Cold Vapour AAS.
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS.
Org-012	Leachates are extracted with Dichloromethane and analysed by GC-MS.
Org-012	Soil samples are extracted with Dichloromethane/Acetone and waters with Dichloromethane and analysed by GC-MS. Benzo(a)pyrene TEQ as per NEPM B1 Guideline on Investigation Levels for Soil and Groundwater - 2013.

NR	Not Reported

Quality Control	ol Definitions
Blank	This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, can be determined by processing solvents and reagents in exactly the same manner as for samples.
Duplicate	This is the complete duplicate analysis of a sample from the process batch. If possible, the sample selected should be one where the analyte concentration is easily measurable.
Matrix Spike	A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.
LCS (Laboratory Control Sample)	This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.
Surrogate Spike	Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.
Australian Drinking	Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & F. Coli levels are less than

Australian Drinking Water Guidelines recommend that Thermotolerant Coliform, Faecal Enterococci, & E.Coli levels are less than 1cfu/100mL. The recommended maximums are taken from "Australian Drinking Water Guidelines", published by NHMRC & ARMC 2011.

Envirolab Reference: 202289-A

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria.

Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction.

Spikes for Physical and Aggregate Tests are not applicable.

For VOCs in water samples, three vials are required for duplicate or spike analysis.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% – see ELN-P05 QA/QC tables for details; <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase.

Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was insufficient in order to satisfy laboratory QA/QC protocols.

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Measurement Uncertainty estimates are available for most tests upon request.

Hi Ken,

Can you please schedule TCLP on the following:

- BH1/0.3-0.4 B(a)P and metals /
- BH2/0.1-0.2 metals -2
- BH3/0.2-0.3 B(a)P and metals \mathcal{H}
- SS1- metals //

Standard TAT

Thanks,

Lab result

HIL/HSL value EIL/ESL value

HIL/HSL exceedance ■ EIL/ESL exceedance ■ HIL/HSL and EIL/ESL exceedance ■ ML exceedance ■ ML and HIL/HSL or EIL/ESL exceedance ■ Indicates that asbestos has been detected by the lab below the PQL, refer to the lab report Blue = DC exceedance

Bold = Lab detections NT = Not tested NL = Non limiting NC = No criteria NA = Not applicable NAD = No asbestos detected

Notes:

HIL/HSL/DC NEPC, Schedule B1 - HIL C (Recreational / Open Space), HSL A/B (Residential / Low - High Density), DC HSL C (Direct contact HSL C (Recreational / Open Space))

ML NEPC, Schedule B1 - ML C/Ind (Commercial and Industrial)

QA/QC replicate of sample listed directly below the primary sample reported naphthalene laboratory result obtained from BTEXN suite

c criteria applies to DDT only

* Depth from bedrock surface (depth does not include surficial fill above the bedrock)
