
Afternoon,

The EIS for the Junction Rivers Wind Farm (specifically the assessment of impacts relating to noise & vibration, shadow flicker, water supply, air quality, hazards & risks - EMF & health etc.) has been reviewed.

The EIS appears to address (monitor, control, mitigate) any detailed potential public health associated with the proposed development.

(noting much of the water supply requirements have not been finalised, the options being investigated appear reasonable).

Any questions, please give me a call.

Regards,

James Allwood
