Attention: Director, Mining & Industry Projects

I am writing in regards to the fit-out and operation of the approved warehouse building which is to be a chemical storage and distribution facility.

We wish not to have this operation carried out due to hazards that can occur and eventually will occur, example of this is the chemical plant in Newcastle 1'Orica', which is currently undergoing investigations of leakage. These accidents can potentially cause great danger to the community and our planet. A government which is so pretentious about climate change should be limiting developments in suburban areas.

We also do not agree that persons who have only lodged donations are the only people that are allowed to make a submission. We have many friends and family in the area and all have been living in the area for several years.

Kind Regards,
