PROPOSED MODIFICATION TO THE ATLAS-CAMPASPE MINERAL SANDS PROJECT ENVIRONMENTAL PLANNING AND ASSESSMENT ACT 1979 (NSW)

Tronox Mining Australia Limited (Tronox) is the proponent of the Atlas-Campaspe Mineral Sands Project (the Project) which includes the development of a mineral sands mining operation (the Atlas-Campaspe Mine), together with the construction and operation of the Ivanhoe Rail Facility (a rail loadout facility) in western New South Wales.

Tronox lodged a modification application for the Project (the Modification) with the NSW Department of Planning, Housing and Infrastructure seeking approval for the following changes to the Atlas-Campaspe Mine component of the Project:

- development of an optimised services corridor between the Atlas and Campaspe deposits, including haul road, pipelines, electricity transmission line, soil stockpiles and water management infrastructure;
- transport of pre-mineral concentrate and ore from the pre concentrator plant to the primary gravity concentration unit via a pipeline and/or truck along the optimised transport route;
- a supplementary biodiversity offset area to replace a small section of the approved biodiversity offset area that would be impacted by the optimised services corridor; and
- rehabilitation of the optimised services corridor so that it can be incorporated into the existing biodiversity offset area post-mining.

The applications for the Modification and accompanying documents can be accessed on the NSW Major Projects Planning Portal (<https://www.planningportal.nsw.gov.au/major-projects/projects/mod-6-optimised-services-corridor>).

For further information relating to Modification, please contact:
