In response to the Stage 1 DGR Condition 11, we confirm the following in relation to the supply of natural gas to the site:

There is an existing natural gas service on the Randwick Campus which serves the domestic hot water heating and mechanical plant requirements of the various existing hospitals, clinical departments, administration buildings and facilities. Given the supply requirements for the new Comprehensive Cancer & Blood Disorder Centre (CCBDC) and a subsequent future multi-storey building likely to be located adjacent, it was agreed that a separate supply shall be extended from the authority infrastructure to serve the proposed gas requirements.

The supply of natural gas to the CCBDC development is proposed from a new, separate authority infrastructure connection from an adjacent gas authority supply network. In our preliminary discussions with Jemena we understand the connection locations will be located in either High or Avoca Streets.

NDY is currently in the process of liaising with Jemena to confirm connection locations, metering requirements and associated costs of the natural gas connection to serve both the CCBDC, and the future building.

We trust that the above details are sufficient for your present purposes.

Regards,

NORMAN DISNEY & YOUNG
