

Director General's Environmental Assessment Requirements

Section 78A(8A) of the *Environmental Planning and Assessment Act 1979*

State Significant Development

Application Number	SSD - 5142
Development	The Newstan Mine Extension Project which includes: • extending underground mining operations within and beyond the existing approved development consent boundaries to extract up to 4.5 million tonnes per annum (Mtpa) of run-of-mine (ROM) coal for 21 years; • utilising and upgrading the existing surface infrastructure, including water management infrastructure, at Newstan and Awaba Collieries; • operating underground water management facilities associated with both Newstan and Awaba Collieries • transferring water between Newstan and Awaba Collieries and the Mandalong minewater management system; • constructing and using a new personnel and materials drift at the Awaba Surface Site to access the Newstan underground workings; • increasing employment to up to 350 workers; • undertaking exploration and rehabilitation activities; and • continuing to operate 24 hours per day, seven days per week.
Location	Surface facilities located at Miller Road, Fassifern and Wilton Road, Awaba; proposed underground mining areas, all within Lake Macquarie LGA.
Applicant	Centennial Coal Company
Date of Issue	20 March 2012
General Requirements	The Environmental Impact Statement (EIS) for the development must meet the form and content requirements in Clauses 6 and 7 of Schedule 2 of the <i>Environmental Planning and Assessment Regulation 2000</i>. In addition, the EIS must include a: • detailed description of the development, including: – need for the proposed development; – justification for the proposed mine plan, including efficiency of coal resource recovery, mine safety, and environmental protection; – likely staging of the development - including construction, operational stage/s and rehabilitation; – likely interactions between the development and existing, approved and proposed mining operations in the vicinity of the site; – plans of any proposed building works; • consideration of all relevant environmental planning instruments, including identification and justification of any inconsistencies with these instruments; • risk assessment of the potential environmental impacts of the development, identifying the key issues for further assessment; • detailed assessment of the key issues specified below, and any other significant issues identified in this risk assessment, which includes: – a description of the existing environment, <u>using sufficient baseline data</u>; – an assessment of the potential impacts of all stages of the development, including any cumulative impacts, taking into consideration relevant guidelines, policies, plans and statutes; and – a description of the measures that would be implemented to avoid, minimise and if necessary, offset the potential impacts of the development, including proposals for adaptive management and/or contingency plans to manage any significant risks to the environment; and • consolidated summary of all the proposed environmental management and

	monitoring measures, highlighting commitments included in the EIS.
Key Issues	The EIS must address the following specific issues: Subsidence – including a detailed quantitative and qualitative assessment of the potential conventional and non-conventional subsidence impacts of the development that includes: - the identification of the natural and built features (both surface and sub-surface), including Lake Macquarie Council's Awaba Waste Disposal Facility; Eraring Power Station, coal unloader and ash dam; high voltage power transmission lines and towers (particularly angle tension towers); Main Northern Railway; F3 Freeway; and Lake Macquarie foreshore and wetlands located within the area that could be affected by subsidence, and an assessment of the respective values of these features using any relevant statutory or policy documents; - accurate predictions of the potential subsidence effects and impacts of the development, including a robust sensitivity analysis of these predictions; - a detailed assessment of the potential environmental consequences of these effects and impacts on both the natural and built environment, paying particular attention to those features that are considered to have significant economic, social, cultural or environmental values; and - a detailed description of the measures that would be implemented to avoid, minimise, remediate and/or offset subsidence impacts and environmental consequences (including adaptive management and proposed performance measures); Land Resources – including an Agricultural Impact Statement and a detailed assessment of the potential impacts on: - soils (including any acid sulfate soils) and land capability (including land contamination); - landforms and topography, including cliffs, rock formations, steep slopes, etc; and - land use, including agricultural, forestry, conservation and recreational use, with particular reference to State conservation areas and State forests – including impacts on forestry resources and forestry activities and consideration of appropriate compensation in relation to forestry production; Water Resources – including: - detailed assessment of potential impacts on the quality and quantity of existing surface and ground water resources, including: - detailed modelling of potential groundwater impacts; - impacts on affected licensed water users and basic landholder rights; and - impacts on riparian, ecological, geo-morphological and hydrological values of watercourses, including environmental flows; - a detailed site water balance, including a description of site water demands, water disposal methods (inclusive of volume and frequency of any water discharges), water supply infrastructure and water storage structures; - an assessment of proposed water discharge quantities quality/ies against receiving water quality and, if relevant, flow objectives; - identification of any licensing requirements or other approvals under the <i>Water Act 1912</i> and/or <i>Water Management Act 2000</i>; - demonstration that water for the construction and operation of the development can be obtained from an appropriately authorised and reliable supply in accordance with the operating rules of any relevant Water Sharing Plan (WSP); - a description of the measures proposed to ensure the development can operate in accordance with the requirements of any relevant WSP or water source embargo; - a detailed description of the proposed water management system (including sewage), water monitoring program and other measures to mitigate surface and groundwater impacts; - a detailed flood impact assessment, taking into consideration:

	○ predicted subsidence effects and identification of impacts on local and regional flood regimes; and ○ resultant impacts on agricultural land use, transport, services, habitability, public safety and other environmental consequences, including any measures proposed to mitigate potential flood impacts; • Biodiversity – including: - measures taken to avoid, reduce or mitigate impacts on biodiversity; - accurate estimates of proposed vegetation clearing; - a detailed assessment of potential impacts of the development on any: ○ terrestrial or aquatic threatened species or populations and their habitats, endangered ecological communities and groundwater dependent ecosystems, including SEPP 14 wetlands; and ○ regionally significant remnant vegetation, or vegetation corridors; - impacts on State conservation areas – including impacts on the conservation and recreational values and landowner consent issues; and - a comprehensive offset strategy to ensure the development maintains or improves the terrestrial and aquatic biodiversity values of the region in the medium to long term; • Heritage – including an assessment of impacts on Aboriginal cultural heritage and Historic heritage, including: - an Aboriginal cultural heritage assessment (including both cultural and archaeological significance) which must: ○ demonstrate effective consultation with Aboriginal communities in determining and assessing impacts, and developing and selecting mitigation options and measures; ○ outline any proposed impact mitigation and management measures (including an evaluation of the effectiveness and reliability of the measures); and - a Historic heritage assessment (including archaeology) which must: ○ include a statement of heritage impact (including significance assessment) for any State significant or locally significant historic heritage items; and, ○ outline any proposed mitigation and management measures (including an evaluation of the effectiveness and reliability of the measures); • Air Quality – including a quantitative assessment of potential: - construction and operational impacts, with a particular focus on dust emissions including PM_{2.5} and PM₁₀ emissions; - reasonable and feasible mitigation measures to minimise dust emissions, including evidence that there are no such measures available other than those proposed; and - monitoring and management measures, in particular real-time air quality monitoring; • Greenhouse Gases – including: - a quantitative assessment of potential Scope 1, 2 and 3 greenhouse gas emissions; - a qualitative assessment of the potential impacts of these emissions on the environment; and - an assessment of reasonable and feasible measures to minimise greenhouse gas emissions and ensure energy efficiency; • Noise – including a quantitative assessment of potential: - construction, operational and off-site transport noise impacts; - reasonable and feasible mitigation measures, including evidence that there are no such measures available other than those proposed; and - monitoring and management measures, in particular real-time and attended noise monitoring; • Traffic & Transport – including: - a detailed assessment of potential impacts of the development on the capacity, safety and efficiency of the local and regional road network, with particular regard to the condition of the existing road network; and
--	---

	- a description of the measures that would be implemented to maintain and/or improve the capacity, efficiency and safety of the road network in the surrounding area over the life of the project; • Visual – including: - a detailed assessment of the potential visual impacts of the project on private landowners in the surrounding area as well as from key vantage points in the public domain; and - a detailed description of the measures that would be implemented to minimise the visual impacts of the project; • Waste – including: - accurate estimates of the quantity and nature of the potential waste streams of the development; and - a description of measures that would be implemented to minimise production of waste on site, and ensure that that waste produced is appropriately managed; Hazards – paying particular attention to public safety, including bushfires and flooding; • Social & Economic – including an assessment of the: - potential direct and indirect economic benefits of the project for local and regional communities and the State; - potential impacts on local and regional communities, including: - o increased demand for local and regional infrastructure and services (such as housing, childcare, health, education and emergency services); and - o impacts on social amenity; - a detailed description of the measures that would be implemented to minimise the adverse social and economic impacts of the project, including any infrastructure improvements or contributions and/or voluntary planning agreement or similar mechanism; and - a detailed assessment of the costs and benefits of the development as a whole, and whether it would result in a net benefit for the NSW community; and • Rehabilitation – including the proposed rehabilitation strategy for the site, having regard to the key principles in the Strategic Framework for Mine Closure, including: - rehabilitation objectives, methodology, monitoring programs, performance standards and proposed completion criteria; - nominated final land use, having regard to any relevant strategic land use planning or resource management plans or policies; and - the potential for integrating this strategy with any other rehabilitation and/or offset strategies in the region.
Plans and Documents	The EIS must include all relevant plans, architectural drawings, diagrams and relevant documentation required under Schedule 1 of the <i>Environmental Planning and Assessment Regulation 2000</i>. These documents should be included as part of the EIS rather than as separate documents.
Consultation	During the preparation of the EIS, you must consult with relevant local, State and Commonwealth Government authorities, service providers, community groups and affected landowners. In particular you must consult with the: • Commonwealth Department of Sustainability, Environment, Water, Population and Communities; • Office of Environment and Heritage (including the Heritage Branch); • Environment Protection Authority; • Division of Resources and Energy within the Department of Trade and Investment, Regional Infrastructure and Services; • Department of Primary Industries (including the NSW Office of Water, NSW Forestry, Agriculture and Fisheries sections, Catchments and Lands (Crown Lands Division)); • Transport for NSW (including the Centre for Transport Planning, and Roads and Maritime Services);

	• Mine Subsidence Board; • NSW Health; • TransGrid; • Hunter Central Rivers Catchment Management Authority; • Dams Safety Committee; • Eraring Energy; • Railcorp; and • Lake Macquarie City Council. The EIS must: • describe the consultation process used and demonstrate that effective consultation has occurred; • describe the issues raised by public authorities, service providers, community groups and landowners; • identify where the design of the development has been amended in response to issues raised; and • otherwise demonstrate that issues raised have been appropriately addressed in the assessment.
Further consultation after 2 years	If you do not lodge a DA and an EIS for the development within 2 years of the issue date of these DGRs, you must consult further with the Director-General in relation to the requirements for lodgement.
References	The assessment of the key issues listed above must take into account relevant guidelines, policies, and plans as identified. While not exhaustive, Attachment 1 contains a list of some of the guidelines, policies, and plans that may be relevant to the environmental assessment of this development.

ATTACHMENT 1 Technical and Policy Guidelines

The following guidelines may assist in the preparation of the Environmental Impact Statement. This list is not exhaustive and not all of these guidelines may be relevant to your proposal.
