Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) &
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Environmental Standards

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Environmental Standards

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 ADWG x10 (March 2015)
#2 ADWG x10 (as per Section 9.3.2)
#3 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction
#4 To obtain F2 subtract napthalene from the >C10 - C16 fraction.
#5 Reported Analyte LOR is higher than Requested Analyte LOR
#6 Value multiplied by 10

Comments
#1 Individual compounds have been assessed through the sum of PFOS+PFHxS
#2 Reported Analyte LOR is higher than Requested Analyte LOR

Environmental Standards
HEPA, March 2025, PFAS NEMP 2025 Recreational water quality guideline

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 To obtain F2 subtract napthalene from the >C10 - C16 fraction.

Annexure D

Remedial options assessment

Table E.1 Assessment of main soil remediation options

Remediation Option	Description	Target COPC	Merits	Disadvantages	Feasibility
Excavation and onsite treatment of hydrocarbon impacted soil – Ex-Situ bioremediation via mechanical biopiling	Excavation of impacted soil and onsite bioremediation. Reinstatement of excavated areas with material validated as suitable for the intended land use. Mechanical biopiling using an aeration blower is preferred as it would minimise disturbance of materials that may have asbestos	Suitable for COPC which bio-attenuate under aerobic conditions, including: • TRH • BTEXN • Lower chlorinated CHC (VC, DCE)	• On-going future liabilities including human health and the environment would be minimised following remediation. • Consistent with community and regulatory expectations of minimal impacts at the site. • Traffic volumes and potential community impacts reduced compared to other alternatives (i.e. offsite disposal) • Consistency with the principles of Ecologically Sustainable Development (ESD). • Moderate costs, lower than offsite disposal if total soli volume is large.	• Extended timeframe for onsite treatment and soil sampling and analysis. • Limited to PHC (better for lighter end compounds) impacted material, lower chlorinated CHC (such as daughter products VC and DCE), and other VOCs. • Biopiling generates odours during placement and turning of material. Erosion and sediment controls would be required •	Likely
In-situ bioremediation via biostimulation or bioaugmentation	Bioremediation in-situ by introduction of additives to enhance microbial degradation or addition of microbes	Suitable for COPC which can bio-attenuate under a variety of remedial conditions, including: • TRH • BTEXN • CHC	• Traffic volumes and potential community impacts reduced compared to other alternatives. • On-going future liabilities including human health and the environment would be minimised following remediation. • Consistency with the principles of ESD. • Consistent with community and regulatory expectations of minimal impacts.	• Extended timeframe for onsite treatment. • Timeframe difficult to estimate. • Restricted to hydrocarbon impacted material. • Need for pilot trials at the Project Area • Potentially expensive implementation to ensure adequate coverage. • Generally lower cost than excavation; but it would require pilot trial and post-remediation long-term monitoring costs.	Unlikely
Excavation of contaminated soil and disposal to licenced landfill or removal to a storage facility	Excavation of impacted soil and offsite disposal to a licenced facility or removal to a storage facility following waste classification	Suitable for all COPC	• On-going future liabilities including human health and the environment would be minimised following remediation. • Proven technology widely applied in Australia and internationally. • Shorter time frame when compared with other options. • Able to handle all solid waste streams generated at the Site (hazardous materials requiring interstate disposal). • Limited onsite handling of wastes thereby reducing odour issues.	• Less preferred within the NSW EPA remediation hierarchy, including preference for recycling and treatment rather than disposal. • Inconsistent with the principles of ESD due to re-location of impacts instead of treatment. • In the event of large volumes to be remediated - increased community impacts associated with increased traffic inconvenience and potential for dust and odour impacts if not managed appropriately. • Higher costs particularly if large contaminated soil volume.	Likely
In-situ solidification / stabilisation	Excavation of impacted soil, blending with a stabilisation amendment or solidification additive and onsite burial within an approved excavation or lined onsite containment cell. Reinstatement of excavated areas could be completed with stabilised material where it is validated as suitable fill.	Suitable for all COPC provided design controls for the vapour intrusion and leachability capacity of the contamination being contained	• Protective of human health including onsite workers and community surrounding the site. • On-going future liabilities including human health and the environment would be low following remediation. • Protective of the environment if appropriately designed and treated. • The target area is likely to have sufficient space to accommodate construction of a containment cell(s) without impacting significantly on future redevelopment. • Moderate costs, lower than offsite disposal if total soil volume is large.	• Less preferred within the NSW EPA remediation hierarchy, as the waste is not treated, reduced in concentration or destroyed. • Land area needed for containment of treated material. • Potential restricted future land use following remediation. • Ongoing monitoring would be required to ensure the efficacy of the treatment. • As a result, there may be contingent liability associated with this approach. • Ongoing monitoring would be required in-situ to assess its long term effectiveness. • Partly consistent with the principles of ESD as it does not remove or reduce directly the COPC.	Likely (relevant to RPIP and/or Limestone Pits)

Remediation Option	Description	Target COPC	Merits	Disadvantages	Feasibility
Engineered capping system with clean soil	Cap contamination to prevent infiltration of surface water into contaminated soil and /or to prevent contact with site users.	Suitable for all COPC provided design controls for the vapour intrusion and leachability capacity of the contamination being capped	• Preferred over off-site disposal within the NSW EPA remediation hierarchy. • Protective of the environment and human health if appropriately designed and managed into the future • On-going future liabilities including human health and the environment would be relatively low following remediation. • Partial consistency with community and regulatory expectations. • Effective for residual contaminant concentrations minimising the exposure pathways to human and environment. • Low to moderate costs. Less expensive than large-scale excavation.	• Less preferred within the NSW EPA remediation hierarchy compared to onsite treatment (where feasible, noting onsite treatment for asbestos is not practicable). • Ongoing management and/ or management plan would be required. • Lateral groundwater flow may still lead to contamination migration, excluding in the case of asbestos impacted soil. • Not suitable for areas with difficult access for plant/machinery etc. • Aligned with ESD principles, but limited by long-term maintenance needs and reliance on cap integrity.	Likely (excluded from the MOD-7 application but will be covered in the KIEP RAP)
Onsite treatment of asbestos impacted materials	Screening or sorting materials to remove asbestos (as per NEPM [1999] as amended requirements)	• Asbestos (non friable)	• May reduce quantity of asbestos impacted material requiring offsite disposal or capping at the Project Area. • Low to moderate costs: labour-intensive, some disposal, but avoids large-scale transport and treatment.	• It is not possible to demonstrate all asbestos has been removed. • The screening and sorting process can potentially result in further breakdown of asbestos materials and potentially liberation of asbestos fibres. • Asbestos fragments smaller than the screen as well as fibres would not be removed. • It is often not practicable to selectively remove asbestos particularly in fill materials and in clayey soils. • Partly aligned with ESD principles by reducing asbestos and enabling soil reuse, but limited by handling risks, potential off-Site disposal, and resource use during sorting.	Likely but not to provide validation
Ongoing Site Management	No remediation – contamination managed under site specific controls in line with OEMP No remedial action taken. Impacted soil left in-situ. Potential ongoing offsite migration of contaminated groundwater.	Suitable for all COPC provided they can meet the following conditions: 1. COPC is not currently mobile 2. COPC does not pose an ongoing risk to human health or the environment	• No disturbance to site required. • No remedial costs incurred other than cost of preparing the Site Management Plan. • No potential impacts related to the remediation of the site. • Risks to human health and the environment managed through defined work practices under the site management plan. • Lowest cost, involving only management planning with no soil handling or treatment, but carries ongoing environmental, health, and reputational risks from leaving contamination in place.	• On-going liabilities including human health and the environment would remain in some target areas. • On-going liabilities including risks to human health and the environment in some target areas. • On-going obligation to adhere to Site Management Plan. • Changes to a more sensitive land use other than commercial/ industrial would not be possible. • Impacted material would remain onsite indefinitely. • Not consistent with the principles of Ecologically Sustainable Development, particularly inter-generational equity. • Inconsistent with community expectations for remediation. • Slightly aligned with ESD principles, but it leaves all contaminants in place and poses ongoing environmental and health risks	Unlikely without remediation
