Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability shc
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspecte
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability shc
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspecte
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability shc
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspecte
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered where appropriate.
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A(1)) & summing
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (should meet relevant HSL)
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be undertaken
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered whe
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (shou
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered whe
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (shou
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered whe
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (shou
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered whe
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (shou
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered whe
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (shou
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered whe
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (shou
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered where appropriate.
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A(1)) & summing
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (should meet relevant HSL)
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be co
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailabili
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considere
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multip
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be co
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailabili
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considere
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multip
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be co
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailabili
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considere
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multip
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be co
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailabili
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considere
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multip
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be co
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailabili
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considere
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multip
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered where appropriate.
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A(1)) & summing
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (should meet relevant HSL)
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (re
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bio
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is prese
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should r

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (re
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bio
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is prese
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should r

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (re
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bio
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is prese
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should r
#9 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (re
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bio
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is prese
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should r

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (re
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bio
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is prese
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should r

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.
#2 Derived soil HSL exceeds soil saturation concentraiton
#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (re
#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bio
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is prese
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should r

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropriate (refer Shedule B7).

Monitoring Zone **Location Code** **Date** **Field ID** **Sample Type**

#4 Guideline value for 'Chromium (VI)' adopted
#5 Lead: HILs A,B,C based on blood lead models (IEUBK & HIL D on adult lead model for where 50% bioavailability considered. Site-specific bioavailability should be considered where appropriate.
#6 Elemental mercury: HIL does not address elemental mercury. a site specific assessment should be considered if elemental mercury is present, or suspected to be present.
#7 Carcinogenic PAHs: HIL based on 8 carc. PAHs & their TEFs (rel to BaP ref Schedule 7) BaP TEQ calc by multiplying the conc of each carc. PAH in sample by its BaP TEF (ref Table 1A(1)) & summing
#8 Total PAHs: Based on sum of 16 most common reported (WHO 98). HIL application should consider presence of carcinogenic PAHs (should meet BaP TEQ HIL) & napthalene (should meet relevant HSL)
#9 PCBs: HIL refers to non-dioxin like PCBs only. Where PCB source is known, or suspected at a site, a site-specific assessment of exposure to all PCBs (inc dioxin like PCBs) should be undertaken
#10 USEPA RSLs Industrial Soil THQ=1.0 (May 2024)
#11 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Comments

#1 To obtain F1 subtract the sum of BTEX concentrations from the C6 - C10 fraction.

#2 Derived soil HSL exceeds soil saturation concentraiton

#3 Arsenic: HIL assumes 70% oral bioavailability. Site-specific bioavailability maybe important and should be considered where appropria

Monitoring Zone	Location Code	Field ID	Date	Sample Type

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to obtain F1 & F2

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Monitoring Zone	Location Code	Field ID	Date	Sample Type

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to ob

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to ob

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Separate management limits for BTEX & naphthalene are not available hence should not be subtracted from the relevant fractions to ob

#2 Reported Analyte LOR is higher than Requested Analyte LOR
