

SUBMISSION R

To Whom it concerns

As a resident living in the contaminated zone at Williamtown we are already stressed with the high contaminant in our blood levels & now we are still trying to block a sand mine development [REDACTED] in Cabbage Tree Rd Williamtown.

We cannot believe that the planning department would approve of a sand mine to proceed in this contaminated area so close to homes & in an area that is flat & a windy area in bad weather.

The thought of the dust problems from road works & a working mine spreading the contamination even further across our properties leaves us cold not to mention the extra trucks in & out opposite our already quite dangerous driveways & on an already heavily used road. This road is already breaking down with the amount of big trucks from the sand mines in our area.

We just hope someone in your department can see the real picture & not the big dollars to be made by a small group of people who live nowhere near the area of course

As we are currently away we were not able to attend the meeting last week but would be happy for you to consult further with the immediate residents at our home so you can see first hand what the road & movement of trucks is already like.

We will be home from 11th August

Many thanks for your time
