Attn: Executive Director, Resource Assessments
Department of Planning and Environment
GPO Box 39
Sydney NSW 2001

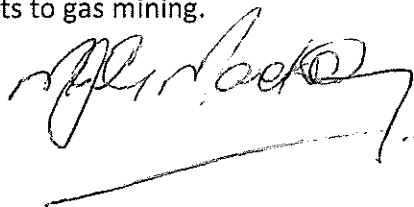

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

- I have seen a map of proposed development of further gas fields in this area & am concerned about the impact of on prime farming land.
- This is a "Dark Sky" area - gasfield development will impact on dark sky & will adversely affect astronomy.
- Water holes & on-again water will be affected, has already been affected.
- Coal seam gas production will not benefit local economy - gas is being exported, with small return to Australia.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

2

Attn: Executive Director, Resource Assessments
Department of Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I object because I don't want the Great Artesian Basin depleted or destroyed. I am a resident of Coonabarabran. I live and work in the Warumbungle Shire area. I came to live here because I worked around the Warumbungle National Park in 1968 and wanted to live in this area at sometime in my life. I object to the destruction of the Pilliga. The amount of salt produced is huge and will be stored in ponds. We are subject to fires every year. Having a huge gas well in the Pilliga is going to be even more destructive when fires occur. Fire storms have occurred in the last 2 years. The last fires - 56 houses, over 102 sheds, animals, fauna destroyed. Gas wells are like having a permanent match in the area.

I ask the Government to reject this project and make the Great Artesian Basin recharge area off-limits to gas mining.

Signed,

pamstein

DUBBO.

This is a submission to the Narrabri Gas Project EIS

I object to this project and believe it should be rejected.

- The project will extract over 35 billion litres of groundwater, much of it in the first five years. Gas is produced after groundwater is drained from the Great Artesian Basin at the site of significant recharge. This water resource is relied upon by farmers in rural communities from Dubbo to the Queensland border. Why put agriculture and associated regional jobs at risk, by lowering the water table on a regional level?
- The produced water is highly saline with dissolved mineral salts and /or organic compounds. There is no known method to re-use the tens of thousands of tonnes of salt. There is no safe disposal method for this salt. The use of reverse osmosis for beneficial re-use of water is questionable and I object to this water being discharged into the Bohen Creek entering the Murray Darling Basin. Extreme cases of sodic soil pollution and vegetation die back has already occurred in 2001, and remains a dead zone.
- The project will clear 850 drill sites, close to 1,000 hectares of the largest temperate woodland in New South Wales, home to unique wildlife such as the koala and threatened plant and bird species.
- Methane emissions from Gas wells, pipelines flares and infrastructure will lead to increased methane emissions above the current baseline and contribute to climate change, resulting in increased regional bushfires and flooding, as we have seen in NSW in 2017.
- The fossil fuel project has no public interest justification, and no social licence with communities who use the Pilliga Forest. Our Prime Minister met with gas producers to insist that current gas projects put aside gas for local industry. Santos has sold our gas offshore and will do so again for company profits not the national interest.
- Dubbo and Narromine Solar Farms are in progress, Dubbo had one of the highest uptake of solar panels on homes, public buildings and industry. We are moving from fossil fuels to renewables at a rapid rate and do not need a risky industry impacting on the people who use Dubbo as a regional centre.
- The project will cause light interference impacting on the international work conducted by astronomers at the Siding Springs complex. This area is Australia's first Dark Sky Park. This status will be lost by light interference from flaring gas infrastructure.
- The project will cause harm to the population living in the area including the fly in fly out workforce. The harm is physical and psychological and documented in peer reviewed literature.
- Aboriginal culture is threatened by this project, which if approved to enter the production phase will cause more trauma to the Traditional Owners.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I Neville Sampson an elder and traditional owner of the Kamilaraay Nation object for the following reasons:

- *The gas project puts too high a risk of poisoning the water that all plants, animals and people depends on
- *The gas project would desecrate our Country.
- *The gas project would result in a bad health impacts, no local economic benefits, drop in property prices, toxic emissions to the air. negatively affect the future generations association to Country.
- *The Great Artesian Basin is recharged by rain in the Pilliga. This recharge area should not be drilled through 850 times
- *Our country is not to be further desecrated.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Attn: Executive Director, Resource Assessments
Department of Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

The diversion of water from a recharge aquifer of the Great Artesian Basin is of great concern. The impacts will cause much trauma to the regional Aboriginal community. The agricultural industries that will put at risk in Narrabri and further. The health concerns posed by this industry and exposing the so many great unknowns. The clearing of this priceless woodland. The toxic ground water will be an ongoing problem long after its creator has gone. The rubbish the public is sold that this is needed and will reduce prices. Climate change can only be increased with these emissions of methane. This country can't afford this menace.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

55

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I'm concern about THE LACK OF DETAIL provided
in Santos' Environmental Impact Statement.
There are NO MAPS?!? On where the wells will
be. The Pilliga region is a SPIRITUAL + CULTURAL
area for the Gomeroi/Gamilaraay people.
This will cut them off from their land
and connection to country.
GROUNDWATER + THE GREAT ARTESIAN BASIN:
Coal Steam Gas is expected to remove
37.5 GL of groundwater. Water is
everything-life! I'm concerned about
the SOCIAL + HEALTH IMPACTS Santos'
impact assessment is 3 years old +
inadequate. The evidence in the USA
is huge regarding water contamination
+ illness through coal steam Gas projects.

I ask the Government to reject this project and make the Great Artesian Basin recharge
off-limits to gas mining.

Signed,

K Howard

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

My objections are based on the following:-

It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.

It will clear close to 1,000 hectares of the Pilliga Forest fragmenting the largest temperate woodland in new South Wales, home to unique wildlife.

It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.

It will add to climate change through large deliberate and fugitive methane emissions.

It will cause trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay People.

It is not justified: Santos' own export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have dealt with the serious health effects appearing in peer-reviewed research in the US.

Furthermore I consider the methodology flawed in relation to the consultation processes and protocols, there are unanswered questions and unaddressed key concerns, there is failure to identify or recognise cultural significance and past harm and failed remediation. The evidence of previous social impact is being ignored and there is a failure to identify social impacts specific to the Gamilaraay People within the scope of study.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

With respect Carol Horton

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

As a Queenslander I am concerned that this project will effect those of us that live on the border. Research has shown that Fraking effects the health of people living close to the wells (ie) Kingaroy Qld. This is beautiful agricultural land I would hate to see it polluted by coal seam gas fields. We need to be looking at renewables. Wind farms & Solar as a viable alternative. Climate change is already visible lets not make it worse.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

Water is our most precious commodity. We are so blessed to have safe clean drinking water in Australia.
Please do not risk this by allowing CSG mining to go ahead.

I have been a farmer in North West NSW all of my life and know that this area is one of the most valuable and productive agricultural areas in the world. It has contributed so much to our economy and without it Australia would not be where it is today.

Why risk this area to CSG mining when farming is sustainable, where as CSG mining has a very limited lifespan and will leave the country in a state of disrepair.

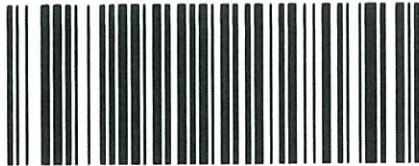

Our future generations are relying on us to make the right decisions for them. So please think of your children and their children and what we will be leaving them for the future.

Once the damage is done there is no going back!

Yours sincerely,

Julie Prowse

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

The Pilliga Forest area is distinctly unsuited to coal seam gas mining development for two main reasons. Firstly, this is an iconic Australian landscape home to many unique creatures and trees which are worthy of protection and also have tourism value. Secondly, this area is close to a prime agricultural area with some of the best top soil for farming in all of Australia. CSG mining is known to cause significant problems with the water table & this cannot be risked in such a place. Please look to the long-term in your decision-making.

- ←
- I am very concerned about the drilling process shattering the rocks it penetrates allowing groundwater to be lost to depennurized coal seams. Groundwater is essential for the survival of communities in these areas. We simply cannot allow any process/mining/drilling to take place that may jeopardize this groundwater. It is essential for the survival of the communities, farmers & graziers.
 - The "production water" contains large quantities of dissolved salts. The reverse osmosis process used to extract these salts is very energy hungry - is this a wise use of energy. How will these salts be disposed? Is it safe to place them in land fill forever? I have grave doubts & fears about this.
 - I am very concerned about "light pollution". Siding Spring observatory is of international importance - I know they are very concerned about the effect of this development on the efficiency.
 - I would like to see the Government spend more time, money & resources developing renewable energy sources.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Marilyn Carter.

Dear Sir/Madam,

This is a submission to the Narrabri Gas Project Environmental Impact Statement
I object to this project and believe it should be rejected.

I have spent six years now researching, investigating and learning about coal seam gas, as well as visiting gas fields. Without doubt, from what I have learned I would never raise my daughter in a gas field.

We are 4th generation farmers and never in 100 years have we seen an industry, run for the wealth of a few and not the well-being of Australia, put our farm, home, business and community at such a risk of pollution and water contamination. Your farms will become ghost towns.

I urge the Government to reject this project and make the Great Artesian Basin recharge off limits to coal seam gas extraction.
