

Mod 6 Architectural Design Statement

The proposed modification (Mod 6) comprises design development changes to the approved Sydney Modern Project State Significant Development (SSD) Application (SSD 6471). It is the result of ongoing design development to ensure more efficient construction processes, improve aspects of safety and accessibility, and to improve amenity.

The proposed modification is comprised of the following changes:

Architecture
Urban Design
Planning
Interior Architecture

Detailed description of Works

1. Building Pressurisation Screen

A low height screen has been added to conceal the building pressurisation fans and intake. This mechanical equipment is necessary to the functioning of the building. The screen will be a solid acoustic screen 1000mm to 1050mm high, with a level top. The base is level with the adjacent elements of the Gallery 1 roof.

The screen is to be clad in aluminium, anodised or similar powdercoat colour. The screen material and finishes will blend into and are sympathetic to the glazed façade of the entry pavilion.

2. Stone Ballast Roof

The roof to Gallery 1 has been changed to a stone ballast roof in place of the previous pigmented concrete roof in this location. This has been done on the basis of cost and aesthetics. This roof is not trafficable except for maintenance purposes.
