OFFICIAL

Hi Jess

Thanks for the invitation to advise on the project.

Whilst we have assessed and responded to this style of development in the past, our preliminary assessment is that this proposal – for an on-land solar farm lying on the most eastern fringe of the Basin and reasonably distant from major waterways – has negligible potential impacts to the flow, control, use and water quality of the River Murray and main tributaries.

As such, no advice from the MDBA is warranted at this time.

Best wishes for progressing the project.

Regards,

Mike Ridley
