Dear Peter

**Re: SECTION 96 - MODIFICATION APPLICATION TO SSD 6952 WENONA SCHOOL  
Noise and Vibration**

The scope of the Section 96 for Wenona School proposed modification includes changes to the internal layouts (and an associated minor increase in GFA), relocation of the exhaust riser, increase in the height of the approved lift overrun .increase in the size of the roof plant and deletion of the retractable awning over the rooftop terrace. The modifications also involve the realignment of the lot within which the approved bridge is located, and underpinning of neighbouring properties to the north and south-east during construction.

In the case of the noise and vibration issues associated with these changes there are none of the above items that would change the project Development Application assessment prepared by Wilkinson Murray titled "PROJECT ARCHIMEDES DA ACOUSTIC ASSESSMENT OF PROPOSED SWIM CENTRE & EDUCATIONAL FACILITY AT WENONA SCHOOL" report number 14351-1 Version B dated April 2015.

Noise and vibration criteria for both construction and operation are still applicable for the project with the proposed design changes. These will be achieved and detailed in the project documentation.

I trust this information has been is of assistance. Please contact me if you have any further queries.

Yours faithfully

**WILKINSON MURRAY**
