OFFICIAL

Tanja

CASA has reviewed the Aviation Safety section of the SEARs and the Aviation section of the Scoping Report (6.10.1) for the proposed Conargo Wind Farm, north east of Conargo. The Scoping Report advises up to 53 wind turbine generators of tip height up to 270m. And some wind monitoring masts. CASA has no issues with the Aviation Safety section of the SEARs and no additional assessment requirements.
