This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, Leah Katz.

Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, [redacted]

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, R

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. 3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, Kel

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. 3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, G Berzins

N.B. THIS IS AN ADDENDUM TO MY ONLINE SUBMISSION

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, B. Lovell

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, B Montgomery

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, Roger Wunder

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, Kate Martin

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, V. Preddey

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, J Victor

Attn: Executive Director, Resource Assessments Department of
Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, D. K. Baird

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, G Wiesner

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, K Ayley

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, G McFadzean

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Attn: Executive Director, Resource Assessments Department of
Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. 3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, G. Bancroft

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, [signature]

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

Attn: Executive Director, Resource Assessments Department of
Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, R Wil

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, F. Graham

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

Cyndi Tebbel

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. 3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, C Scott.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for its impact on community safety which will be put significantly at risk by the project and its impact on road traffic in the Highlands.

- The EIS and DA lodged by Hume Coal in respect of the Berrima Rail Project shows that there will be additional traffic delays at level crossings. (ES3.3)
- The rail route of the 4 daily coal trains from the Hume Coal mine and 4 back to the mine will involve 17 level crossings in the Southern Highlands and down the escarpment on the route to Port Kembla.
- The addition of the Hume Coal trains will add an extra 24 minutes of closures at rail level crossings each and every day
- This will result in daily closures at rail crossings rising from 69 minutes every day to 93 minutes or more than one and a half hours daily.
- Major rail crossings to be impacted include those at Robertson and on Sheepwash Road
- The nearly 30% increase in the total time rail crossings are closed each day as a result of the Hume Coal proposal will present unacceptable impacts on emergency vehicles including fire brigades, ambulances, police and other critical community services.

I urge the Government to reject this project

Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, David. Carr

Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, M Pyne

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, J. Emmerton

Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, Christina Nielsen

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed, D Leonard

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

1/ The SCOPE of the EIS is inadequate as the Hume Coal Project significantly impacts the Berrima branch line AND the Unanderra to Port Kembla Branch line. Now the Tahmoor mine will operate into the future the extra traffic from Hume will double the amount of coal train traffic on the Unanderra line.

2/ Whilst a GRADE SEPARATION is proposed for the Old Hume Highway, Suttor Road in Moss Vale, Sheepwash Road and Illawarra Highway crossings are completely ignored. These last two crossings experience high levels of traffic in morning, afternoons and weekends. Many of the road users are tourists unfamiliar with the local area and rail level crossings. The Suttor Road crossing is used by both Moss Vale local residents and industrial area traffic. With the increase in heavy rail traffic these crossings pose an unacceptable risk to public safety and to rail staff.

3/ PEDESTRIAN traffic including school children are seriously at risk in Moss Vale and Robertson. Robertson in particular has a number pedestrian crossings and road crossing that are inadequate and poorly fenced.

4/The rail line runs approx. 30 metres behind the 160 STUDENT Robertson Primary School. The children play and spend time on the oval area that runs beside the rail line. Coal dust and noise pose an unacceptable health risk to school children and School staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this project as it proposes an unreasonable risk to public health and safety.

Signed,
