This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

Signed,

John Willis

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

Signed,

Elaine Jenner

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

This is a submission to the Hume Coal Project EIS. SSD 7172

I object to this project and believe it should be rejected as the Hume Coal EIS is misleading. Just one example is the **"Do Nothing Alternative"** analysis which is both inaccurate and incomplete.

- The EIS states that the Do Nothing Alternative would leave 50 Mt of coal unrecovered. However it would also lead to the highly beneficial result of 93 bores on 71 properties being unaffected allowing for the continued pursuit of economic benefits by the current and future land holders.
- Similarly the significant threat to the aquifer and the consequential impact on the Sydney water catchment would be eliminated.
- The significant costs of remediation which will ultimately be partially borne by the community as a cost of Hume Coal's operation would also be avoided. (As this expenditure is a tax deduction for Hume Coal).
- The foregone rates royalties and taxes which amount to \$316m over the 23 years the project runs is a small price to pay to maintain the security of our water resources and to avoid the health risks associated with the dust and noise produced by the mine and the transportation of the coal. Taxes paid on the growth of the sustainable economy may exceed that number over 23 years.
- The impact of the "do nothing alternative" on employment opportunities is significantly overstated. In assessing the benefits of the project Hume Coal in the EIS acknowledges that 80% of the people employed by the project would find "alternative employment in NSW in the absence of the project". Therefore only 20% of the 414 construction jobs and 300 operational jobs can be counted in the Do Nothing Alternative.
- Alternatively the Do Nothing Alternative will allow for the unimpeded growth of the major employing industries in the Southern Highlands namely Retail and Accommodation and Food.
- The removal of 2920 (8x365) coal train journeys each year for the next 19 years will significantly reduce the time delay and negative safety impacts on the 17 rail level crossings regularly used by business and private transport users. The reduction in rail traffic on the existing line from the Berrima Cement works to Port Kembla would result in lower maintenance costs. It will also remove dust and noise issues from all localities along the route of the coal trains.

This is a very weak proposal for a poor project and I urge the Government to reject this project.

It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. "There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration." (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

Signed,

ABPewck

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

Signed,

H. Woods

The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting an unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.

Sydney NSW 2001

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."*(World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

This is a submission to the Berrima Rail Project EIS. SSD 7171

I object to this project and believe it should be rejected for the following reasons.

- The construction of above ground infrastructure will directly impact on cultural landscape of the surrounding villages Berrima, Sutton Forest and Exeter. The construction of the rail infrastructure will deter visitation to Berrima especially from the south. This will have a major negative affect the tourist based economy of Berrima.
- The Landscape is generally Zoned E3 by the Wingecarribee LEP 2010 which has a goal to preserve the rural landscape character and the significant cultural values of the landscape. This development does not meet these goals in any way.
- The graded separation proposed with rail over the road at the Old Hume Highway can only be called a potential blight on the visual landscape and the southern approach to Berrima, New Berrima and Medway. It will also enable rail noise to travel further due to the elevated position. The design totally disregards the cultural value of the landscape so critical to the preservation to the heritage of the Berrima and Sutton Forest area.
- The noise, exhaust fumes and coal dust from the trains will have potential health impacts from the rail loop to Port Kembla. These risks cannot be totally eliminated no matter what the design of the locomotives and coal trucks. These trains pass 30 m behind the Robertson Primary school presenting and unacceptable health risk to young children and staff. *"There may be no safe threshold for fine particulate matter and the effects are linearly related to concentration."* (World Health Organisation & Australian National Pollution Inventory)

I urge the Government to reject this flawed project as it will damage the heritage of this culturally significant region and jeopardise public health and safety.
