

Native Buffer Vegetation

A native vegetation buffer zone has been designed around the perimeter of the park to screen the service road and car-park areas from view. This area will create new habitat areas for birds and animals.

Endemic Cumberland plain tree species such as *Melaleuca sieber*, *Heakea sericea*, *Acacia parramattensis* and *Eucalyptus amlifolia* will be planted along with a selection of endemic understory shrubs and grasses.

Works yard

A large works yard will be constructed at the western area of the site. This space will be an important piece of infrastructure for the zoo providing areas for Zoo vehicle parking, maintenance equipment and other ancillary items.
