

City Form

The following is an analysis of the broader city form, with its intensity of built form in the Central CBD spine scaling down to the periphery. There are exceptions to the arched skyline where the 'city' meets the waters edge'. They are Circular Quay, Barangaroo and Market Street. These three locations are typified by a vibrant and pedestrianised waterfront promenade. Each example is framed by large scale developments that contribute to the skyline, and provide energy, excitement and activity to the waters edge.
