7. Parking Potential in Martin Street

Length of existing grassed area adjacent to high school sporting field in Martin Street = 124m

No. of potential parking bays:

45°	= 35 (medium turnover), 36 (low turnover)
60°	= 43 (medium turnover), 44 (low turnover)
90°	= 49 (medium turnover), 51 (low turnover)

8. Conclusions

The aerial and street photographs included within this report demonstrate that there is a low parking utilisation rate in Cherry, Swift and Martin streets fronting the existing Ballina High School. The figure and table following summarise the data included in these photos by articulating the number of bays available in these areas and the number of bays occupied at the time each photo was taken. The parking utilisation for this area ranges between 0.8% and 26.2%, with an average utilisation rate of 11.8%. Removing the most recent counts conducted in March and April 2017 (i.e. since Ballina High School has closed for reconstruction), the average utilisation rate is 18.9%, translating to 99 vacant parking bays out of the 122 total bays available in the study area shown below.
