Dear Zoe

RE: CONCRUSH RRF EXPANSION (SSD-8753) – OAQMP REVISION – VERSION V3

Please see our revised Operational Air Quality Management Plan (OAQMP) for your approval.

The Concrush OAQMP has been revised as per the following details:

1. Concrush employed "Yard Manager" has been revised to "Operations Manager" throughout Plan. (Page i, 3, 19/20).
2. A typing error has replaced "odour" for "dust" on Page 13.
3. Deleting the reference to "two (2) gauges per location" in Section 8.2.1 and requiring the standard one dust gauge per boundary on Page 17.

This section,

"Eight (8) dust depositional gauges have been installed at four (4) boundary locations (i.e. two (2) gauges per location) around the Concrush Teralba Site (refer **Figure 5**) to meet the objectives for dust emissions for the site. At each of the nominated boundary locations, two (2) gauges will be installed in accordance with the AS/NZS 3580.1.1:2016: *Guide to siting air monitoring equipment* ensuring that these are positioned to ensure no interference from the other gauge.

As part of the assessment of dust emissions at the site one of the bottles at each of these locations will be modified to enable dust collection only when Concrush is operational. These are denoted at "B" Figure 5 below and have been identified in the field with a blue paint mark on the stand. The modified sampling will require the placement of a cover over the top of the funnel at the end of each day and the removal of that cover at the beginning of each day. This will be the responsibility of the Yard Manager and a record of the actions must be maintained (refer **Appendix 1**)."

replaced with

"Dust depositional gauges have been installed at four (4) boundary locations around the Concrush Teralba site (refer **Figure 5**) to meet the objectives for dust emissions for the site; a further gauge is present at the weighbridge. At each of the nominated boundary locations, one (1) gauge have been installed in accordance with the AS/NZS 3580.1.1:2016: *Guide to siting air monitoring equipment* ensuring that these are positioned to ensure no interference from the other gauge."

4. In section 8.3.1, page 18, the sentence "Concrush propose to install additional units in the future....." is replaced with "Concrush may install additional units in the future...."
5. Section 12.3 Dust Reporting page 23 removing the reference to "two (2) gauge results at each location".
6. Deleting reference to Appendix 1 "Dust Gauge Adjustment Record" and making Appendix 2 the new Appendix 1 and making the old Appendix 3 the new Appendix 2.

Please contact me if you require any more information.

Yours sincerely

Kevin Thompson
