STATE SIGNIFICANT DEVELOPMENT APPLICATION – CIVIL ENGINEERING

ISSUE AUTHORISATION

Document Title:	Mudgee Hospital Redevelopment State Significant Development Application Report - Civil
Document Number:	5498-CIV-RP-003 State Significant Development Application Report – Civil Rev A
Project Reference:	5498
Prepared For:	Health Infrastructure NSW
Date:	May 2018
Author:	William Wright
Reviewer:	Qusai El-Jurf

Rev	Date	Purpose of Issue / Nature of Revision	Prepared by	Reviewed by	Issue Authorised by
A	30/05/18	Issued for Approval	WW	QEJ	QEJ

Executive Summary

The purpose of this report is to present the Civil Engineering strategy proposed for the Mudgee Hospital Redevelopment (MHR) to support a State Significant Development Application (SSDA) and address the Drainage and Sediment, Erosion and Dust Controls Secretary's Environmental Assessment Requirements SEARs conditions from application number SSD9211.

Proposed Redevelopment

Detailed health service planning activities and building audits have concluded that the current health facilities at Mudgee are no longer suitable for the delivery of contemporary health services and do not allow for efficient bed utilisation and staffing.

In June 2017, the State Government announced an investment of $70.2M for the redevelopment of the Mudgee Hospital and Health Service, which will include an upgrade to expand and reconfigure inpatient and ambulatory care services.

Existing Site

The site generally falls from south to north and has a crest through the centre which causes the site to fall west and east. Mudgee Railway Precinct (decommissioned) which borders the north side of the site is listed as a heritage building. A large portion of the of the existing site discharges overland to the decommissioned rail reserve.

Drainage from the existing buildings discharges directly into the adjacent streets bounding the site via small surface level outlet pipes. There is no existing on-site stormwater detention (OSD) or Water Sensitive Urban Design (WSUD) measures on the existing site.

Onsite Stormwater Detention

Onsite stormwater detention (OSD) is required to restrict post-development peak discharge rates to pre-development peak discharge rates for storm events up to and including the 100-year ARI event. The minor storm, as specified in Appendix D5 of Mid-Western Regional Council's DCP, is the 10-year ARI event which will be contained underground via two new gravity stormwater networks.

Due to natural topography, the south west corner of the site and the majority of the proposed building's roof will bypass the OSD system and will discharge to an existing open channel between Atkinson Street and Mudgee Showground via water quality treatment measures.

The majority of the proposed roads and parking areas along with a section of the roof catchment will be attenuated in a detention basin OSD system. The volume of storage required to restrict the post-developed peak discharge rates to the permissible site discharge is 175 m^3.

Overland Flow

Overland flow from the site maintains the general arrangement of the existing site. Guidelines for developments adjoining land managed by the Office of Environment and Heritage state that there should be 'no increase in pre-development peak flows from rainfall events with a 1 in 5 year and 1 in 100 year recurrence interval'.

The proposed OSD basin discharges no stormwater to the Mudgee Railway Precinct during a 5 year average recurrence interval (ARI) rainfall event because the flow is contained within the proposed stormwater network discharging to Church Street. The existing has a 5 year ARI peak discharge rate of 168 l/s to the rail precinct.

Overland flow from the OSD basin discharges 330 l/s (peak) to the rail precinct during a 100 year ARI event. The existing site has a 100 year ARI peak discharge rate of 409 l/s to the rail precinct. Therefore, the proposed development does not increase the peak flow rates to the rail precinct but instead is an improvement on the existing situation.

WSUD Strategy

The new development will significantly increase impervious area. Thus, the new development requires pollution reduction measures incorporated within the design to remove potential contaminants from the system.

A detailed water quality analysis has been undertaken to develop the water sensitive urban design (WSUD) strategy for the proposed development and meet Mid-Western Regional Council's water quality targets. The development will achieve the pollution reduction targets identified in Council's DCP by utilising (WSUD) treatment initiatives.

The WSUD Strategy proposed for the development utilises a treatment train approach, consisting of the following: rain gardens, catch pit inserts, a fuel/water separator and a bioretention swale.

Stormwater Connection

Stormwater Network 1 will connect into an existing stormwater pit located in the north-west corner of the site which is connected to council's drainage network located in Church Street.

Stormwater Network 2 will connect into the existing open channel between Mudgee Showground and Atkinson Street

Contents

1 Introduction

enstruct group have been engaged by Health Infrastructure NSW (HI) as civil and structural engineering consultants on the Mudgee Hospital Redevelopment (MHR) project.

The purpose of this report is to present the Civil Engineering strategy proposed for the Mudgee Hospital Redevelopment (MHR) to support the State Significant Development Application (SSDA). Specifically, this report addresses the following Secretary's Environmental Assessment Requirements (SEARS) conditions from application no. SSD9211:

- 12 – Sediment, Erosion and Dust Controls
    - Detail measures and procedures to minimise and manage the generation and off-site transmission of sediment, dust and fine particles.
- 16 – Drainage
    - Detail drainage associated with the proposal, including stormwater and drainage infrastructure.
    - Detail measures to minimise operational water quality impacts on surface waters and groundwater.

2 Existing Site Conditions

2.1 Site Description

The existing hospital site is bounded by Church Street to the west, Meares Street to the south, Lewis Street to the east and Mudgee Railway Station (decommissioned) to the north. The site generally falls from south to north and has a crest through the centre which causes the site to fall west and east.

The site falls approximately 6.1 m from RL 477.70 mAHD at the centre of the southern boundary to RL 471.80 mAHD in the north-west corner and the north-east corner.

2.2 Existing Site Drainage

A site visit conducted on 27/07/2017 determined that stormwater drainage from the existing buildings on site discharge directly into the adjacent streets bounding the site via small surface level outlet pipes. Investigation of the site determined that no onsite stormwater detention currently exists.

3 Proposed Development

3.1 Redevelopment Proposal

A new hospital building is proposed in the south-west corner of the site in the location of the existing Community Health Centre and Wellness Centre. A new public car park, staff car park, ambulance bay and service yard are located to the east and north-east of the proposed building which will require the demolition of the existing Main Hospital Building, Boiler House & Workshops and Store Building. Figure 3.1 shows the proposed site layout.

3.2 Proposed New Building Location

A site layout showing the existing buildings to be demolished with an overlay of the proposed new building and parking areas has been produced by architects Silver Thomas Hanley (STH) Architects. Figure 3.1 shows the location of the proposed new building and the demolition of existing buildings.

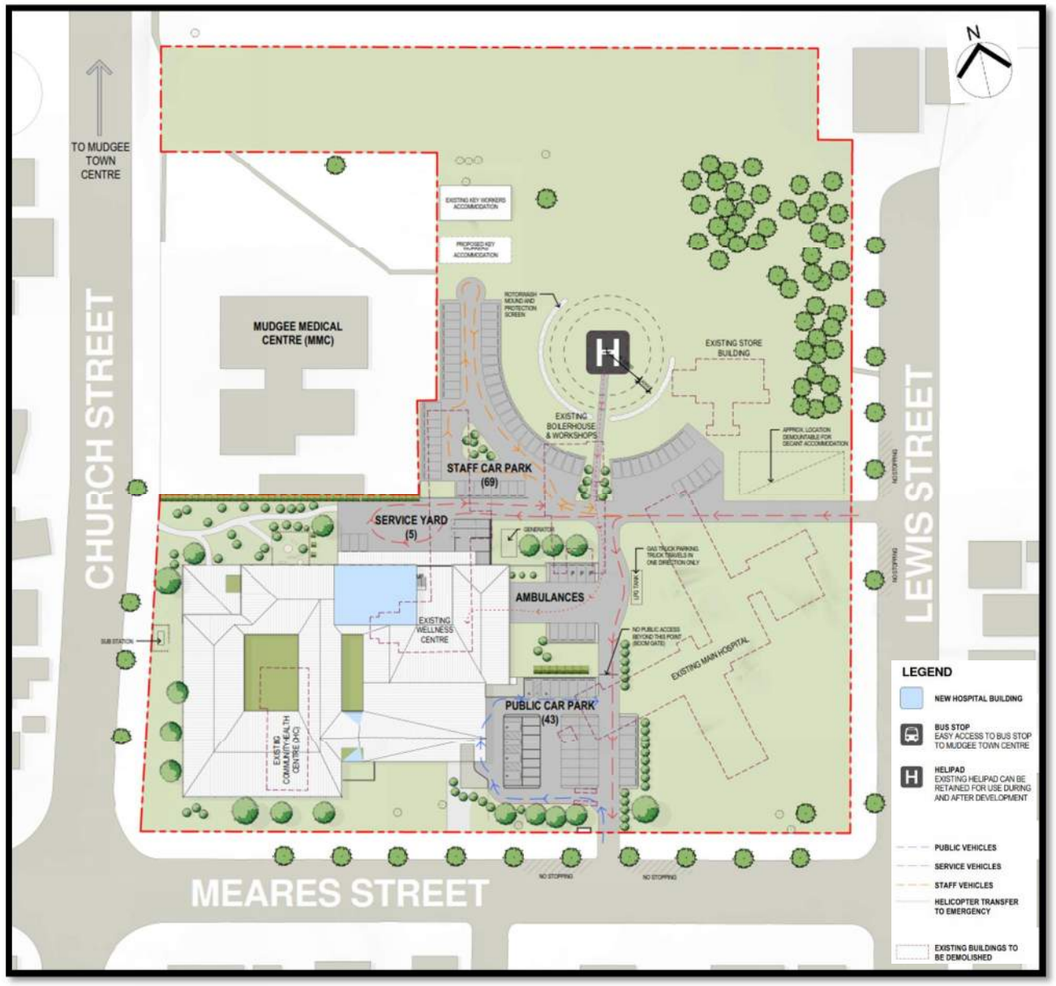

Figure 3.1 Proposed Location of New Development (Source: STH Architects)

4 *Stormwater Drainage*

Due to site topography and the lack of depth in the receiving council stormwater network in Church Street, two stormwater networks have been designed to convey flows from the proposed development. Drawing 130511-ENS-CIV-DWG-0200 of Appendix A shows the site stormwater layout.

4.1 *Stormwater Network 1*

The first stormwater network drains the majority of the pavement catchment to the east and north of the proposed new building as well as collecting runoff from the existing helipad. The network conveys stormwater west around the north side of the Mudgee Medical Centre (MMC).

The network includes an on-site stormwater detention (OSD) system, a 220 m^2 raingarden and a Rocla 1200 Ø Downstream Defender before discharging to a council stormwater pit in Church Street.

4.2 *Stormwater Network 2*

The second stormwater network drains the majority of the roof catchment in the south-west corner of the site. The network bypasses the OSD system due to the natural topography of the site falling towards the west. The network drains to a raingarden adjacent to the south-west boundary and Stormwater 360 Enviropod pit inserts are proposed for water quality purposes.

Survey information provided by Geolyse dated 11/09/17 (ref: 217467_01C_D01-D07) shows that there is no existing Council stormwater network adjacent to the south west corner of the site in Church Street.

A new stormwater line is proposed in Meares Street to connect to Council's stormwater open channel between Mudgee Showground and Atkinson Street.

On-Site Stormwater Detention

Council require that the stormwater peak discharge rate from the developed site is restricted to the peak discharge rate of the pre-developed site. DRAINS software has been used to hydraulically model the stormwater networks and size the OSD system. The results from the DRAINS model are contained within Appendix C.

The minor storm, as specified in Appendix D5 of Mid-Western Regional Council's DCP, is the 10-year ARI event which will be contained underground via two new gravity stormwater networks.

A 175 m3 above ground detention basin has been designed in the grassed area north of the MMC. A 300 mm diameter outlet pipe will restrict the discharge of Stormwater Network 1 to ensure that the combined discharge from both networks is below the permissible site discharge (PSD) rate.

Table 4.1 below presents the results of the hydraulic modelling for stormwater network 1, 2 and the total site. The results show that for all rainfall events up to and including the 1% AEP event, the proposed development generates a substantial improvement on stormwater discharge.

Table 4.1 – Stormwater Peak Discharge Rates

Rainfall Event	Pre Development	Post Development			Total SW Discharge Reduction
	Total Site (m^3/s)	SW Network 1 (m^3/s)	SW Network 2 (m^3/s)	Total Site (m^3/s)	
20% AEP	0.419	0.064	0.213	0.277	34%
10% AEP	0.542	0.087	0.254	0.341	37%
1% AEP	0.997	0.341	0.401	0.742	26%

5 *Overland Flow*

Overland flow from the site maintains the general arrangement of the existing site. The site drains from the higher southern end towards the lower northern corners. The north-west corner of the site drains into Church Street and the north-east corner of the site drains into Lewis Street. The east side of the site will remain undeveloped and will continue to drain overland towards Lewis Street.

5.1 *Stormwater Discharging to Heritage Land*

Guidelines for developments adjoining land managed by the Office of Environment and Heritage state that there should be 'no increase in pre-development peak flows from rainfall events with a 1 in 5 year and 1 in 100 year recurrence interval'.

Figure 5.1 shows the broad stormwater catchments of the existing site. Catchments 2 and 4 drain east and will remain the same after the proposed development.

Catchment 1 discharges to the heritage listed Mudgee Rail Recinct via overland flow in the existing situation and will be actively drained by a new stormwater network. For rainfall events larger than the stormwater network is designed for (10 year ARI) the network will surcharge and overland flow will be drained to the rail precinct, following the existing regieme.

5.1.1 Small Storm Event

The proposed OSD basin discharges no stormwater to the Mudgee Railway Precinct during a 5 year average recurrence interval (ARI) rainfall event because the flow is contained within the proposed stormwater network discharging to Church Street. The existing has a 5 year ARI peak discharge rate of 168 l/s to the rail precinct.

5.1.2 Large Storm Event

Overland flow from the OSD basin discharges 330 l/s (peak) to the rail precinct during a 100 year ARI event. The existing site has a 100 year ARI peak discharge rate of 409 l/s to the rail precinct. Therefore, the proposed development does not increase the peak flow rates to the rail precinct but instead is an improvement on the existing situation.

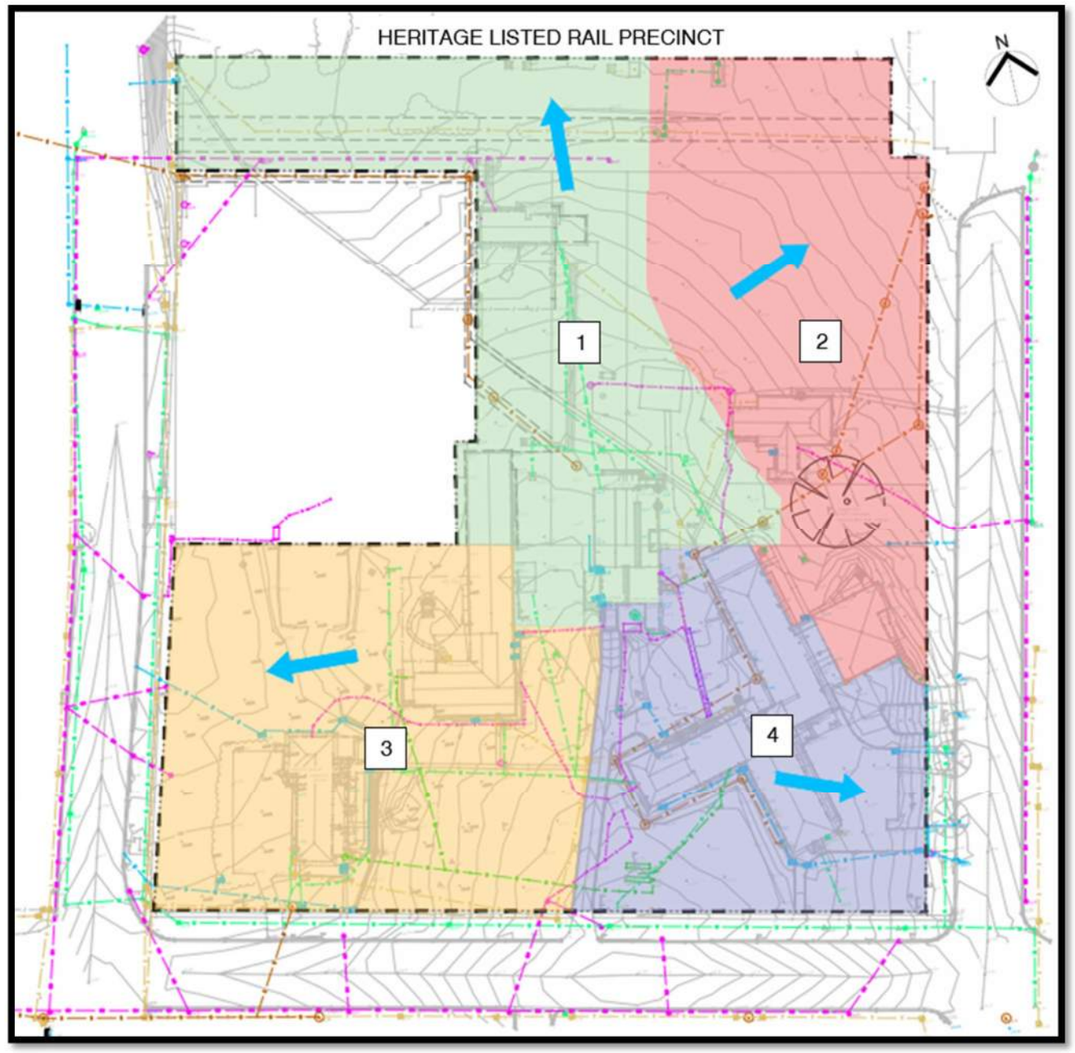

Figure 5.1 – Existing Site Catchment Plan

6 *Water Sensitive Urban Design*

The overall site stormwater management objectives applicable to the site were identified as follows:

Table 6.1 Stormwater Management Objectives

Management Objective	Measure
Environmental	Provision of appropriately designed OSD facilities, limitation of downstream discharge peaks and velocities. WSUD quality targets adhered to and treatment train hierarchy considered
Urban Amenity	Provision of a stormwater management strategy that ensures the effective drainage of the site and provision of aesthetic design forms that enhance amenity
Engineering Considerations	Effective management and control of peak discharges, discharge velocities and site detention; industry best practice technical analysis of catchment hydrology and system hydraulic performance
Economics	Provision of a cost effective, functional site drainage system that optimises performance, provides maximum value for expenditure and keeps on-going maintenance requirements to a minimum

The Stormwater Management Strategy proposed for site development has been prepared with consideration of the above objectives and Council's requirements and guidelines. The strategy focuses on minimising the impacts of the development on the adjoining properties and maximising the environmental, social and economic benefits achievable by utilising responsible and sustainable stormwater management practices.

6.1 *Water Quality Requirements*

Stormwater to Smartwater (S2S) is the name given to Council's plan to improve stormwater management across the Local Government Area (LGA). The provisions in S2S outline minimum requirements needed to obtain a Development Application and Occupation Certificate.

The document offers technical guidance and minimum requirements for designing infiltration trenches, raingardens, permeable paving and rainwater tanks. This document has been referred to when designing water quality treatments for the new development.

6.2 *Existing Site*

At present the extent of the current site contains a variety of healthcare facilities, associated hard standing areas for parking and access roads. A large portion of the site to the east and the north will not be affected by the proposed development. The area of the site which will be affected by the development is approximately 23,200 m^2. The existing impervious area of this section of this site is approximately 6,770 m^2 (30%). The proposed impervious area of this section post-development is approximately 11,170 m^2 (49.5%).

The new development will significantly increase impervious area. Thus, the new development requires pollution reduction measures incorporated within the design to remove potential contaminants from the system.

6.3 *WSUD Pollution Reduction Initiatives*

The development will achieve the pollution reduction targets identified in Mid-Western Regional Council's DCP by utilising water sensitive urban design (WSUD) treatment initiatives. The pollutant reduction requirements outlined in 6.2 below have been adopted as the minimum values for water quality treatment.

Table 6.2. Pollutant Reduction Targets

Pollutant	Guideline Reduction
Gross Pollutants (GP)	90%
Total Suspended Solids (TSS)	85%
Total Phosphorous (TP)	65%
Total Nitrogen (TN)	45%

6.4 *Raingardens*

Raingardens are specially designed garden beds which filter stormwater runoff from surrounding areas or stormwater pipes. They are also called bio-retention systems as they provide biological treatment of stormwater using soil, plants, roots and microbes.

Raingardens are designed to stop excess stormwater, nutrients, and sediment from polluting council's drainage system. Figure 4.1 below shows a detail of the proposed raingarden design.

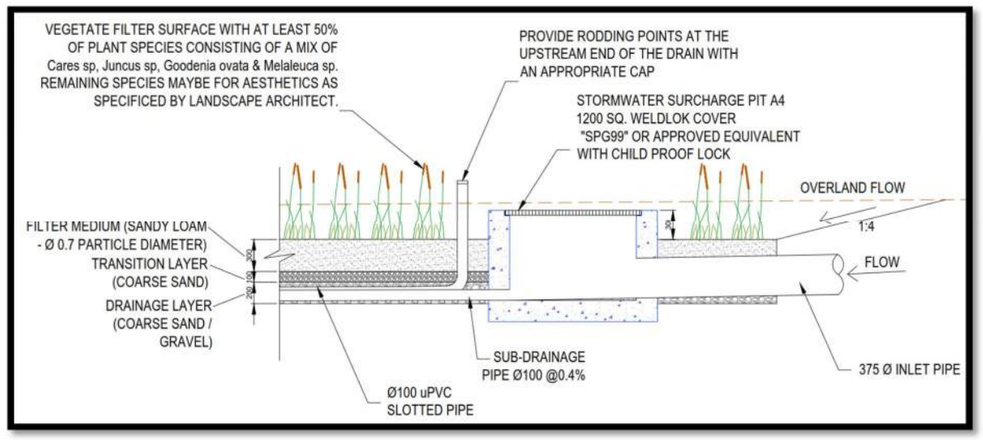

Figure 4.1 Raingarden Detail

A raingarden lets water collect and settle on the garden surface then soak through the plants and filter media. Sediment is trapped on the surface. Nutrients dissolved in the stormwater are used by the plants and toxins stick to the soil. The soil and plant roots work together to naturally filter the water and remove pollutants.

A 220 m2 raingarden is proposed for Stormwater Network 1 and a 90 m2 raingarden is proposed for Stormwater Network 2. Overflow pits will be provided within the raingardens to take excess flows and bypass them directly into the drainage systems.

6.5 *Pit Inserts*

Pit inserts, also known as litter baskets, are considered as an at-source primary treatment solution. It is an efficient and cost-effective pre-screening primary treatment system that captures and retains gross pollutants at drainage entry points. Pit inserts, consisting of a capture basket and a filter mesh liner, are usually fitted below the road invert or surface of the pit and hence are visually unobtrusive.

Pit inserts can be customised to fit almost any stormwater inlet pit and the mesh liner opening could vary depending on the targeted capture of solids, sediment and attached pollutants. Cleaning of the pit inserts is undertaken either manually or using a small vacuum truck. The cleaning frequency depends on the catchment type, size and expected pollutant loading.

Pit inserts have been proposed for the stormwater pits in the paved areas of Stormwater Network 1 and the stormwater pits adjacent to the proposed building for Stormwater Network 2. Figure 4.2 below presents schematic detail of a pit insert.

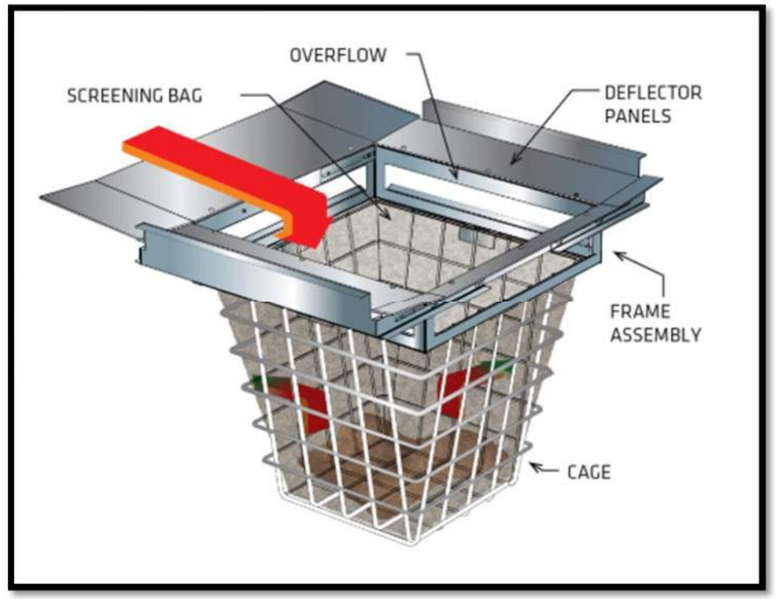

Figure 4.2 Enviropod® Pit Insert Detail (Source: Stormwater360)

6.6 *Downstream Defender*

A Rocla 1200 mm diameter Downstream Defender® has been specified to treat runoff from Stormwater Network 1 which includes large paved areas and runoff from the existing helipad. The Downstream Defender® device is an advanced hydrodynamic vortex separator that is specifically designed to provide high removal efficiencies of settleable solids and their associated pollutants, oil, and floatables over a wide range of flow rates.

The frequency of cleanout is determined in the field after installation. During the first year of operation, the unit should be inspected every six months to determine the rate of sediment and floatables accumulation. This information can be used to establish a routine maintenance schedule.

Figure 4.3 shows a schematic diagram of a Downstream Defender®.

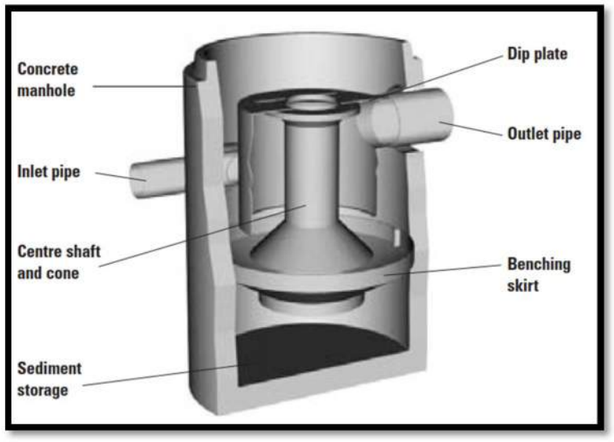

Figure 4.3 Schematic Diagram of a Downstream Defender® (Source: Rocla)

6.7 *Music Modelling*

A detailed water quality analysis has been undertaken to develop the WSUD strategy for the proposed development to meet Council's water quality targets. The water quality modelling for this study has been undertaken using the industry standard software model MUSIC (Model for Urban Stormwater Improvement Conceptualisation) Version 6.2.

Appendix B contains a schematic diagram of the proposed water quality treatment train layout and the results of the MUSIC water quality model for the site.

The WSUD strategy will be further developed with the landscape architect to achieve site aspirations and water quality targets.

7 *Sediment and Erosion Control*

Sediment and erosion controls will be provided during the construction phase in accordance with Council guidelines and Landcom – Managing Urban Stormwater "Blue Book" Guidance. These control measures have been developed in consideration of the necessary earthworks associated with the development.

A Sedimentation and Erosion Control Plan (refer Appendix A) has been prepared for the site works which includes measures such as sediment basins, catch drains to direct runoff to the sediment basin, sediment fences surrounding disturbed areas to capture sediment runoff, sandbags at all existing pits collecting stormwater runoff from disturbed areas, and a truck shaker tray at each point of access to the work area.

The measures to be adopted are summarised in the table below:

Table 4. Sedimentation Control

Measure	Location	Purpose
Sediment Fence	Near site boundary along the downstream side of the site.	To prevent sediment leaving the site with stormwater runoff. Stormwater will pass through the fence but the fence will trap the sediment.
Shaker Grid and Wash Down	At construction exit from the site.	To remove ground materials from the construction vehicle wheels prior to the vehicle leaving the site and discharging material onto the public roadway.
Sand Bag Sediment Traps	Directly upstream of all stormwater kerb inlet structures located in close proximity of the site.	To prevent sediment discharged from the site from entering the stormwater inlet structure and contaminating the water course.
Inlet Sediment Trap	Around any stormwater surface inlet structures	To prevent sediment discharged from the site from entering the stormwater inlet structure and contaminating the water course.
Sediment Basin	At the downstream end of the site near the boundary.	To store sediment on site during the construction phase. Basins to be cleaned out prior to the completion of the landscaping in the basins.

Final details of Erosion and Sediment Control measures for the early works and main works are to be implemented on site by the successful contractor. The Contractor will be required to take into account the site works staging including the preferred site access points, site shed locations and temporary stockpile locations in developing and implementing these requirements but will be ultimately responsible for managing temporary stormwater and sediment and erosion control during construction.

GENERAL

1. ALL WORKS TO BE CARRIED OUT IN ACCORDANCE WITH WILLOUGHBY COUNCIL DESIGN GUIDELINES AND SPECIFICATIONS. WHERE DISCREPANCIES OCCUR THE MORE STRINGENT SPECIFICATION WILL TAKE PREFERENCE.
2. COORDINATES AND REDUCED LEVELS ARE GIVEN IN METRES UNO.
3. REDUCED LEVELS ARE TO AUSTRALIAN HEIGHT DATUM (AHD).
4. ALL COORDINATES ARE TO MAP GRID OF AUSTRALIA (MGA) UNO.
5. DIMENSIONS ARE IN MILLIMETRES UNO.
6. WORKMANSHIP MUST BE IN ACCORDANCE WITH THE DRAWINGS, RELEVANT AUSTRALIAN STANDARDS AND CODES OF PRACTICE.
7. DO NOT SCALE OFF FROM DRAWINGS. WRITTEN DIMENSIONS SHALL ALWAYS TAKE PRECEDENCE OVER SCALED DIMENSIONS.
8. WHERE REFERENCE IS MADE TO PROPRIETARY COMPONENT NAMES ON THE DRAWINGS, THE CONTRACTOR MAY PROPOSE ALTERNATIVES FOR APPROVAL BY THE ENGINEER IN ADVANCE, AS LONG AS THEY ARE EQUIVALENT OR BETTER.
9. SERVICES SHOWN ON THE DRAWINGS ARE FOR INFORMATION ONLY. IT IS THE CONTRACTOR'S RESPONSIBILITY TO CHECK THE EXISTENCE AND LOCATION OF SERVICES PRIOR TO COMMENCING CONSTRUCTION.
10. ON COMPLETION OF THE WORKS, THE CONTRACTOR MUST RESTORE AREAS DISTURBED FOR HIS OWN CONVENIENCE TO THE ORIGINAL CONDITION AND LEAVE THE SITE NEAT AND TIDY.
11. ALL NEW WORKS SHALL MAKE SMOOTH JUNCTION WITH EXISTING CONDITIONS.WHERE DETAILS DO NOT EXIST, CONTACT THE ENGINEER.
12. SEDIMENT CONTROL MEASURES SHALL BE IMPLEMENTED PRIOR TO SOIL DISTURBANCE IN KEEPING WITH THE "MANAGING STORMWATER MANUAL", 2004 BY LANDCOM AND TO COUNCIL'S SOIL EROSION AND SEDIMENT CONTROL POLICY.
13. CONTRACTOR SHALL MAINTAINED DUST CONTROL THROUGHOUT THE DURATION OF THE PROJECT.
14. ALL PITS DEEPER THAN 1.2m SHALL HAVE STEP IRONS PROVIDED IN ACCORDANCE WITH COUNCIL'S STANDARDS.
15. ALL DRAINAGE LINES THROUGH LOTS SHALL BE CONTAINED WITH THEIR EASEMENT AND CONFORM WITH COUNCIL'S STANDARDS.
16. SUBSOIL DRAINS SHALL BE CONSTRUCTED TO THE SATISFACTION OF THE COUNCIL.
17. MINIMUM 100mm THICK TOPSOIL SHALL BE SPREAD ON ALL FOOTPATHS,BERMS, BATTERS AND SITE REGRADING AREAS. EXCESS TOPSOIL SHALL BE DISPOSED OF AS DIRECTED BY THE ENGINEER.
18. THE CONTRACTOR SHALL PROVIDE MINIMUM 48 HOURS NOTICE TO THE ENGINEER FOR ALL INSPECTIONS.
19. THE CONTRACTOR SHALL MAINTAIN SERVICES AND ALL WEATHER ACCESS AT ALL TIMES TO THE ADJOINING PROPERTIES.
20. THE CONTRACTOR SHALL UNDERTAKE TRAFFIC CONTROL MEASURES TO ENGINEERS SATISFACTION AND SHALL DISPLAY APPROPRIATE WARNING SIGNS THROUGHOUT THE DURATION OF CONSTRUCTION.
21. ALL NATURAL SURFACE DATA HAS BEEN DETERMINED BY TERRAIN MODELLING. ALL SITE WORKS MUST BE CARRIED OUT USING THE BENCH MARKS NOTED ON THIS DRAWING.
22. 100 YEAR FLOW PATHS TO BE FORMED AT TIME OF CONSTRUCTION.
23. ABBREVIATIONS:

TEMPORARY WORKS

1. THE CONTRACTOR MUST MAKE ALL ARRANGEMENTS TO CONTROL PEDESTRIAN AND VEHICULAR TRAFFIC ON FOOTPATHS AND PUBLIC ROADS AROUND THE SITE AND MUST INSTALL AND MAINTAIN WARNING SIGNS AND SAFETY DEVICES IN ACCORDANCE WITH AS1742.3 AND RTA TRAFFIC MANAGEMENT GUIDELINES.
2. UPON COMPLETION OF THE WORKS, ALL TEMPORARY WORKS MUST BE REMOVED AND AFFECTED AREAS REINSTATED TO MATCH EXISTING.

SURVEY

1. DETAILED GROUND SURVEY WITHIN THE SITE AND BOUNDARIES WERE SUPPLIED BY PROJECT SURVEYORS, GEOLYSE ORANGE, REFERENCE NUMBER 217467_01C-D01-D07, DATED 11/09/2017.
2. THE INFORMATION IS SHOWN TO PROVIDE A BASIS FOR DESIGN. ENSTRUCT GROUP DOES NOT GUARANTEE THE ACCURACY OR COMPLETENESS OF THE SURVEY BASE.
3. SURVEY MARKS SHALL BE MAINTAINED AT ALL TIMES. WHERE RETENTION IS NOT POSSIBLE THE ENGINEER SHALL BE NOTIFIED AND CONSENT PRIOR TO THEIR REMOVAL.
4. SHOULD DISCREPANCIES BE ENCOUNTERED DURING CONSTRUCTION BETWEEN THE SURVEY DATA AND ACTUAL FIELD DATA, CONTACT ENSTRUCT GROUP.
5. ALL WORKS TO BE SET OUT BY A REGISTERED SURVEYOR.

DEMOLITION

1. DEMOLITION WORKS MUST COMPLY WITH THE REQUIREMENTS OF AS2601.
2. EXISTING STRUCTURES MUST BE DEMOLISHED AS NECESSARY WITHIN THE EXTENTS OF THE NEW WORKS. THIS INCLUDES FOUNDATIONS TO EXISTING STRUCTURES. DEMOLITION MATERIAL MUST BE REMOVED OFF-SITE OR AS DIRECTED BY THE PROJECT MANAGER.

STORMWATER DRAINAGE

1. ALL PIPES LARGER THAN 225Ø, SUBJECT TO VEHICLE LOADING, MUST BE REINFORCED CONCRETE CLASS '3' RUBBER RING JOINT TO AS1342 UNO.
2. THE CONTRACTOR IS TO ORGANISE AND STAGE CONSTRUCTION WORK AND UNDERTAKE ANY DIVERSION WORKS TO ENSURE THE EXISTING DRAINAGE IS ABLE TO CONVEY ALL STORMWATER FLOWS THAT MAY OCCUR DURING THE PERIOD OF THE CONSTRUCTION WORKS.
3. THE CONTRACTOR IS TO PROVIDE DIVERSION WORKS ETC TO PROTECT WORKS IN PROGRESS UNTIL SUCH A TIME AS THE WORKS ARE IN A FINISHED AND STABLE CONDITION.
4. ANY DAMAGE TO THE WORKS DUE TO STORMWATER FLOWS OR FLOODING DURING THE CONSTRUCTION PERIOD IS AT THE CONTRACTOR'S RISK.
5. SETOUT POINTS FOR STORMWATER STRUCTURES ARE AS INDICATED IN THE DRAWINGS UNLESS OTHERWISE NOTED.
6. ALL PAVED SURFACE LEVELS AND GRADES TO BE COORDINATED WITH GULLY PIT LEVELS TO ENSURE NO UNDRAINED AREAS OCCUR.
7. THE SIDES OF ALL PIPE TRENCH EXCAVATIONS DEEPER THAN 1.0m SHALL BE FULLY SUPPORTED AT ALL TIMES AND HAVE APPROPRIATE EDGE PROTECTION.
8. ALL NEW PIPES TO BE LAID IN AN UPSTREAM DIRECTION. THE LINE, LEVEL AND LOCATION OF EXISTING SERVICES CROSSING THE LINE OF THE PROPOSED STORMWATER PIPE SHALL BE DETERMINED BY EXCAVATION PRIOR TO THE LAYING OF THE PIPE. IF CONFLICT IS APPARENT, THE ENGINEER SHALL BE NOTIFIED AND INSTRUCTIONS AS TO WHETHER THE EXISTING SERVICE IS TO BE ADJUSTED OR THE PROPOSED PIPE INVERT ALTERED WILL BE ISSUED.
9. PIPE BEDDING, HAUNCH AND BACKFILL TO BE AS SHOWN ON THE CIVIL DETAILS DRAWINGS AND THE CIVIL SPECIFICATION.
10. SUBSOIL DRAINAGE PIPES TO BE SLOTTED PIPE AND FILTER SOCK CLASS 1000 TO AS2439 PART 1 LAID AT PREFERABLE MINIMUM GRADE 1 IN 100 OR ABSOLUTE MINIMUM 1 IN 200 WHERE LIMITED BY OUTFALL LEVELS.
11. STORMWATER STRUCTURES ARE TO BE CONSTRUCTED PERPENDICULAR TO THE INCOMING PIPEWORK UNLESS OTHERWISE NOTED.
12. PRECAST COMPONENTS SHALL BE CONNECTED BY MEANS OF EPOXY OR CHEMICAL GROUTED BARS OF THE SAME DIAMETER AND SPACING AS THE SMALLER BARS IN THE RESPECTIVE COMPONENTS.
13. PRE-CAST PITS MUST HAVE LIFTING ANCHORS.
14. WORKING LOADS ARE THOSE DUE TO FILL MATERIAL AND STANDARD HIGHWAY VEHICLES AS PER AS3725. CONSTRUCTION LOADS HAVE NOT BEEN ALLOWED FOR.
15. ALL EXPOSED EDGES ON STORMWATER PITS TO BE ROUNDED TO 5mm RAD. UNO.

EARTHWORKS

1. ALL TREES AND SHRUBS (UNLESS NOTED TO BE PROTECTED ON THE LANDSCAPE PLANS), RUBBLE, EXISTING PAVEMENT AND EXISTING STRUCTURES WITHIN THE SITE SHALL BE REMOVED AND REUSED OR RECYCLED WHERE POSSIBLE. WHERE NOT POSSIBLE, THIS MATERIAL SHALL BE REMOVED FROM SITE AND DISPOSED OF AS PART OF THE CONTRACT.
2. ANY TREES WITHIN THE WORKS AREA WHICH, IN THE OPINION OF THE CONTRACT ADMINISTRATOR, ARE UNSOUND OR WOULD CONSTITUTE A DANGER, SHALL BE CUT DOWN AND REMOVED (EXCEPT THOSE IDENTIFIED AS BEING PROTECTED). ALL STUMPS OF TREES CUT DOWN WITHIN THE BOUNDS OF THE CONSTRUCTION AREA WHICH ARE LARGER THAN 250mm IN GIRTH, SHALL BE COMPLETELY REMOVED.
3. ALL ROOTS SHALL BE REMOVED FOR A DEPTH OF 1m. CAVITIES FORMED BY THE REMOVAL OF ROOTS SHALL BE BACKFILLED AND COMPACTED.
4. AFTER CLEARING AND GRUBBING ARE COMPLETE, THE CONTRACTOR SHALL STRIP AND STOCKPILE TOPSOIL FROM THE CLEARED AREA (INCLUDING AREAS THAT HAVE BEEN CLEARED AND GRUBBED). REMOVAL OF TOPSOIL FROM ANY SECTION OF THE WORKS SHALL ONLY COMMENCE AFTER SEDIMENT AND EROSION CONTROLS HAVE BEEN IMPLEMENTED.
5. TOPSOIL SHALL BE STRIPPED FROM WITHIN THE FORMATION AREAS OF ROADS, PATHWAYS, BUILDING PADS AND MISCELLANEOUS PAVEMENTS, INCLUSIVE OF BATTERS, AND IS TO BE CONSERVED FOR THE TOP-DRESSING OF FORMED FOOTWAYS, BERMS AND BATTERS TO THE SPECIFIED DEPTH, OR WHERE NO DEPTH IS SPECIFIED TO A MINIMUM DEPTH OF 150mm, OR AS DETERMINED ON-SITE.
6. EXCAVATED FILL MATERIAL NOT SUITABLE FOR REUSE ON-SITE MUST BE REMOVED OFF-SITE OR OTHERWISE USED IN LANDSCAPING AREAS WHERE AGREED IN ADVANCE WITH ENGINEER.
7. EROSION AND SEDIMENT CONTROL MUST BE PROVIDED IN ACCORDANCE WITH THE REQUIREMENTS OF THE LOCAL CITY COUNCIL DCP, DA AND CC CONDITIONS, AND BE INSTALLED TO THE SATISFACTION OF THE ENGINEER.
8. THE CONTRACTOR SHALL TAKE ALL NECESSARY STEPS TO LIMIT THE CREATION OF DUST NUISANCE, WHICH MIGHT ARISE DURING THE EXECUTION OF THE WORKS.
9. FILL MATERIAL MUST BE PLACED IN MAXIMUM LAYERS OF 200mm (LOOSE) OR AS OTHERWISE GIVEN IN THE SPECIFICATION AND COMPACTED TO THE LEVELS AS SPECIFIED ON THE DRAWINGS.
10. COMPACTED FILL MUST BE TESTED IN ACCORDANCE WITH THE REQUIREMENTS OF AS3798 AND AS GIVEN IN THE CIVIL SPECIFICATION.
11. BEFORE PLACING FILL, PROOF ROLL EXPOSED SUBGRADE WITH AN 12 TONNE (MIN) DEADWEIGHT SMOOTH DRUM VIBRATORY ROLLER TO DIRECT THEN REMOVE SOFT SPOTS (AREAS WITH MORE THAN 2mm MOVEMENT UNDER ROLLER. PROOF ROLLING SHALL COMPRISE 6 PASSES OF A MINIMUM.
12. FREQUENCY OF COMPACTION TESTING SHALL BE NOT LESS THAN :
    (A) 1 TEST PER 200m³ OF FILL PLACED PER 200mm THICK LAYER OF FILL
    (B) 3 TESTS PER LAYER
    (C) 1 TEST PER 2000m³ OF EXPOSED SUBGRADE
    TESTING SHALL BE "LEVEL1" TESTING IN ACCORDANCE WITH AS 3798 (2007) AT CONTRACTOR EXPENSE.
13. NO FILLING SHALL TAKE PLACE TO EXPOSED SUBGRADE UNTIL THE AREA HAS BEEN PROOF ROLLED IN THE PRESENCE OF GEOTECHNICAL ENGINEER AND APPROVAL GIVEN IN WRITING THAT FILLING CAN PROCEED.
14. THE CONTRACTOR SHALL ALLOW FOR AND COORDINATE ALL MONITORING AND MAINTENANCE REQUIREMENTS IN RELATION TO SOIL AND GROUNDWATER CONDITIONS DURING CONSTRUCTION.
15. ALL LAND DISTRIBUTED BY EARTHWORKS SHALL BE HYDROMULCHED, OR SIMILARLY TREATED TO ESTABLISH GRASS COVER, SEED MIXTURES ARE TO BE APPROVED BY COUNCIL PRIOR TO SPRAYING ALL GRASSED AREAS SHALL BE REGULARLY WATERED AND MAINTAINED UNTIL EXPIRATION OF THE MAINTENANCE PERIOD.

LOCATION	STANDARD DRY DENSITY (AS (1289 E 5.1.1.)
UNDER BUILDING SLABS ON GROUND	98-102%
UNDER PADS, FOOTWAYS AND CARPARKS	98-102%
LANDSCAPED AREAS UNLESS NOTED OTHERWISE	95-102%

UTILITIES

1. LOCATE ALL PIPES, DUCTS, CABLES, RETAINING WALLS AND EXCAVATIONS OUTSIDE A 1:2 (VERTICAL:HORIZONTAL) ZONE OF INFLUENCE FROM THE BOTTOM EDGE OF THE FOOTING.
2. THE CONTRACTOR MUST TAKE EVERY PRECAUTION TO PROTECT EXISTING GAS, WATER, STORMWATER, SEWERAGE, ELECTRICITY, TELEPHONE CONDUITS AND OTHER EXISTING WORKS AND SERVICES.
3. CIVIL WORKS REQUIRED TO PROTECT EXISTING SERVICES IS TO BE AT THE FULL COST OF THE CONTRACTOR.
4. THE LOCATION OF UNDERGROUND SERVICES SHOWN IN THIS SET OF DRAWINGS HAVE BEEN PLOTTED FROM SURVEY INFORMATION AND SERVICE AUTHORITY INFORMATION. THE SERVICE INFORMATION HAS BEEN PREPARED ONLY TO SHOW THE APPROXIMATE POSITION OF ANY KNOWN SERVICES AND MAY NOT BE AS CONSTRUCTED OR ACCURATE.
5. ENSTRUCT GROUP CAN NOT GUARANTEE THAT THE SERVICES INFORMATION SHOWN ON THESE DRAWINGS ACCURATELY INDICATES THE PRESENCE OR ABSENCE OF SERVICES OR THEIR LOCATION AND WILL ACCEPT NO LIABILITY FOR INACCURACIES IN THE SERVICES INFORMATION SHOWN FROM ANY CAUSE WHATSOEVER.
6. CONTRACTOR SHALL TAKE DUE CARE WHEN EXCAVATING ONSITE INCLUDING HAND EXCAVATION WHERE NECESSARY.
7. CONTRACTORS ARE TO CONTACT THE RELEVANT SERVICE AUTHORITY PRIOR TO COMMENCEMENT OF EXCAVATION WORKS.
8. CONTRACTORS ARE TO UNDERTAKE A SERVICE SEARCH, PRIOR TO COMMENCEMENT OF WORKS ON SITE. SEARCH RESULT ARE TO BE KEPT ON SITE AT ALL TIMES.

CONCRETE

1. THE MINIMUM CONCRETE GRADE MUST BE 25MPa UNO. THE GRADE DESIGNATION SPECIFIES THE REQUIRED CHARACTERISTIC CYLINDER STRENGTH (MPa) AT 28 DAYS.
2. EXCEPT WHERE OTHERWISE NOTED ON THE DRAWINGS, THE FOLLOWING CLASSES OF FORMWORK MUST BE USED ALL IN ACCORDANCE WITH AS3610; SURFACES THAT WILL BE RENDERED-CLASS 4, CONCEALED FROM VIEW BELOW GROUND-CLASS 5, ALL OTHER SURFACES-CLASS 3.
3. PROVIDE 10mm WIDE EXPANSION JOINTS BETWEEN BUILDINGS AND ALL CONCRETE OR UNIT PAVEMENTS.
4. IN-SITU CONCRETE KERB AND GUTTERING MUST BE PROVIDED WITH JOINTS AT 4m INTERVALS. JOINTS MUST BE FORMED BY CUTTING THE NEWLY PLACED CONCRETE COMPLETELY THROUGH NORMAL TO THE LINE OF KERB AND RADIALLY ON CURVES. EVERY FOURTH JOINT IS TO BE FORMED AS AN EXPANSION JOINT.
5. KERBS AND GUTTERS MUST BE COVERED AND KEPT DAMP FOR NOT LESS THAN THREE DAYS.
6. ALL WORKMANSHIP AND MATERIALS SHALL BE IN ACCORDANCE WITH AS3600 CURRENT ADDITION WITH AMENDMENTS, AS3735 AND WS-SPEC (WATER SERVICES SPECIFICATION).
7. COVER TO REINFORCEMENT SHALL BE OBTAINED BY THE USE OF CONCRETE OR PLASTIC BAR CHAIRS FOR BOTTOM REINFORCEMENT, AND PLASTIC TIPPED WIRE BAR CHAIRS FOR TOP REINFORCEMENT. ALL CHAIRS TO BE SPACED 750 CRS. MAXIMUM.
8. FABRIC LAP DETAIL:

9. REINFORCEMENT SHALL NOT BE BENT OR HEATED ON-SITE WITHOUT THE ENGINEER'S PRIOR APPROVAL.
10. CONCRETE TO BE MECHANICALLY VIBRATED TO ACHIEVE A DENSE HOMOGENOUS MASS COMPLETELY FILLING THE FORMWORK, THOROUGHLY EMBEDDING THE REINFORCEMENT AND FREE OF STONE POCKETS.
11. SURFACE FINISH TO BE BROOMED UNLESS SHOWN OTHERWISE.
12. DECORATIVE FINISHES, COLORS OR PATTERNS TO BE APPLIED AS SHOWN ON THE ARCHITECT'S PLAN.

SIGNS AND LINEMARKING

1. ALL PAVEMENT MARKINGS, CHEVRONS AND REFLECTORS ARE TO BE IN ACCORDANCE WITH RMS QA SPECIFICATION R141 & R142, CURRENT RMS DELINEATION GUIDELINES, AUSTRALIAN STANDARDS AND RMS SUPPLEMENTS.
2. ALL SIGNS TO BE IN ACCORDANCE WITH CURRENT AUSTRALIAN STANDARD AS 1743 - ROAD SIGNS,RMS SUPPLEMENTS AND COUNCIL'S SPECIFICATIONS UNLESS STATED OTHERWISE.
3. ROAD SIGNS ARE SIZE 'A', UNLESS OTHERWISE SHOWN. LOCATE OUTSIDE OF CLEAR ZONES.
4. AUTHORIZATION FOR THE INSTALLATION OF ALL REGULATORY SIGNPOSTING AND LINE MARKING ILLUSTRATED ON THIS PLAN IS TO BE OBTAINED FROM RMS, TRAFFIC ENGINEERING SERVICES.REGULATORY SIGNPOSTING AND LINE MARKING SHOWN ON THESE PLANS ARE NOT APPROVED FOR INSTALLATION.
5. ALL NEW PAVEMENT MARKINGS ARE TO BE INSTALLED IN WHITE REFLECTIVE, THERMOPLASTIC PAINT.
6. PAVEMENT MARKINGS THAT FORM NO PART OF THE FINAL WORKS ARE TO BE REMOVED BY WATER BLASTING OR OTHER METHOD AS APPROVED BY THE SUPERINTENDENT/PROJECT MANAGER.

DRAWING
EROSION AND SEDIMENT CONTROL PLAN

DRAWING NUMBER	ISSUE
130511-ENS-CIV-DWG-0400	B

EROSION AND SEDIMENT CONTROL:

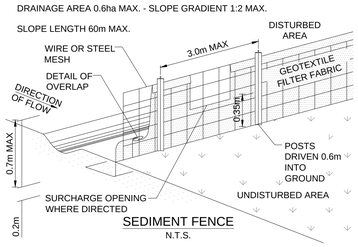
1. THE CONTRACTOR SHALL PROVIDE ADEQUATE TRUCK WASH FACILITIES AT THE SITE EXIT AND SHALL CLEAN ALL VEHICLES EXITING THE SITE TO ENSURE MATERIALS AND MUD IS NOT TRANSPORTED AND DEPOSITED OFF SITE. WATER FROM ANY WASHBAY IS TO BE DIVERTED TO THE SEDIMENT FENCE OR TO THE SEDIMENT BASIN PRIOR TO DISCHARGE.
2. NOTWITHSTANDING THE EROSION AND SEDIMENT CONTROL NOTES THE CONTRACTOR SHALL NOTE THEIR OVERARCHING OBLIGATION WITH THE CITY OF RYDE COUNCIL IN RESPECT OF ENVIRONMENTAL CONTROLS. PARTICULARLY ONGOING TESTING OF DISCHARGE, MAINTENANCE, DREDGING OF SEDIMENTATION PONDS AND FINAL FILTRATION AT OUTLETS.
3. THE CONTRACTOR SHALL TAKE ALL STEPS NECESSARY TO PROTECT THE ENVIRONMENT AND IN PARTICULAR SHALL CONTROL EROSION, SEDIMENTATION AND POLLUTION DURING CONSTRUCTION IN ACCORDANCE WITH THE REQUIREMENTS OF THE EPA, DEC, COUNCIL, AND THE EROSION AND SEDIMENT CONTROL PLAN.
4. EROSION AND SEDIMENT CONTROL DEVICES ARE TO BE CONSTRUCTED IN ACCORDANCE WITH "MANAGING URBAN STORMWATER - SOILS AND CONSTRUCTION' (2004 - BLUE BOOK), AND CITY OF RYDE COUNCIL'S DCP.
5. EROSION AND SEDIMENT CONTROL DEVICES SHALL BE CONFIRMED IN THE QUALITY PLAN PRODUCED BY THE CONTRACTOR AND SHALL BE IMPLEMENTED AND ADJUSTED TO SUIT CONSTRUCTION ACCESS AND STAGING.
6. FOLLOWING EVERY RAINFALL EVENT EXCEEDING 10mm OR WHEN BASINS ARE GREATER THAN 50% FULL, WATER SHALL BE TESTED FOR COMPLIANCE WITH EPA'S STANDARDS AND, IF FOUND NOT TO COMPLY, WATER SHALL BE TREATED BY APPROPRIATE FLOCCULATION, FILTRATION OR OTHER APPROVED METHODS.
7. WATER SHALL NOT BE REMOVED FROM SEDIMENT BASIN UNTIL TESTED WATER MEETS EPA WATER QUALITY REQUIREMENTS e.g <50 MG/L SUSPENDED SOLIDS.
8. CONTRACTOR TO PROVIDE ALL PERIMETER SITE FENCING FOR SECURITY & SAFETY PURPOSES AS REQUIRED.
9. PUMP TO SYDNEY WATER SEWER ONLY WHEN WATER QUALITY MEETS EPA GUIDELINES (E.G. TSS < 50mg/L)
10. OBTAIN APPROVALS FROM SYDNEY WATER OR COUNCIL TO PUMP TO RECEIVING PIT.
11. EMPTY SEDIMENT BASIN WITHIN 72 HOURS OF RAINFALL. TREAT WATER AS NECESSARY TO ACHIEVE REQUIRED WATER QUALITY STANDARDS.
12. THE EARLY WORKS ARE OUTSIDE THE 100 YEAR ARI FLOOD EXTENTS OF UNIVERSITY CREEK; HENCE WILL NOT IMPACT THE FLOODING REGIME OF THE CREEK.

STOCKPILE NOTES:

1. PROTECT ALL STOCKPILES FROM SCOUR AND EROSION. DO NOT STOCKPILE LOOSE MATERIAL IN ROADWAYS, NEAR DRAINAGE PITS OR IN WATERCOURSES.
2. SPOIL & TOPSOIL STOCKPILES SHALL BE LOCATED AWAY FROM DRAINAGE LINES AND AREAS WHERE WATER MAY CONCENTRATE. STOCKPILES ARE TO BE SURROUNDED BY SEDIMENT FENCE.
3. IF STOCKPILES ARE TO BE IN PLACE FOR LONGER THAN 30 DAYS THEN THEY SHALL BE STABILIZED BY COVERING WITH MULCH OR WITH TEMPORARY VEGETATION.
4. FOLLOWING CONSTRUCTION, TOPSOIL SHALL BE RESPREAD TO A MINIMUM DEPTH OF 100mm ON BARE SOIL SURFACES AND REVEGETATED.

NOTE:

- THIS DRAWING IS TO BE READ IN CONJUNCTION WITH 130511-ENS-CIV-DWG-0400

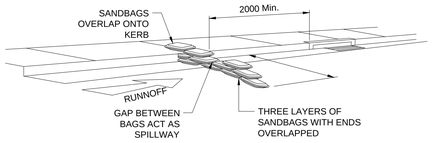


SEDIMENT FENCE
N.T.S.

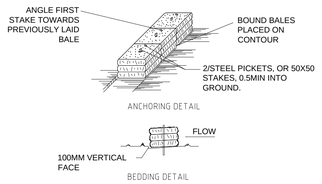
INSTALLATION

1. EXCAVATE A TRENCH 200mm DEEP.
2. DRIVE POSTS 500-700mm INTO GROUND AT A MAXIMUM SPACING OF 3.0m CENTRES.
3. PLACE AND FIX SUPPORT MESH (F52) TO POST.
4. LAY BIDIM GEOFABRIC (SF 2000) AGAINST THE SUPPORT MESH AND FIX BY TIE WIRE, STAPLES OR HOG RINGS.
5. PLACE BIDIM IN TRENCH AND BACKFILL WITH SOIL.

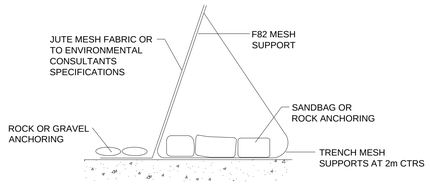
NOTE:
POSITION OF SEDIMENT FENCE AS DIRECTED BY SUPERINTENDENT. FENCE TO REMAIN IN PLACE UNTIL EXCAVATION IS BELOW FOOTPATH LEVEL.



SANDBAG SEDIMENT TRAP
N.T.S.



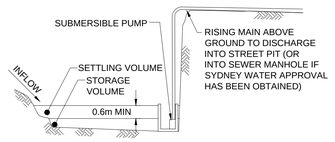
SEDIMENT STRIP CONTROL
N.T.S.



ALTERNATIVE SEDIMENT FENCE
N.T.S.

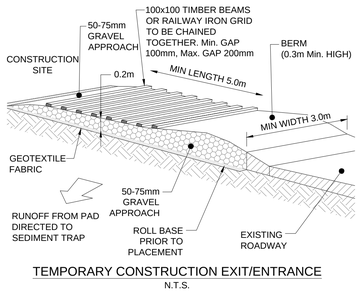
ALTERNATIVE SEDIMENT FENCE NOTES

1. INSTALL THIS TYPE OF SEDIMENT FENCE WHEN USE OF SUPPORT POSTS IS NOT DESIRABLE OR NOT POSSIBLE. SUCH CONDITIONS MIGHT APPLY, FOR EXAMPLE, WHERE APPROVAL IS GRANTED FROM THE APPROPRIATE AUTHORITIES TO PLACE THESE FENCES IN HIGHLY SENSITIVE ESTUARINE AREAS.
2. USE BENT TRENCH MESH TO SUPPORT THE F82 WELDED MESH FACING AS SHOWN ON THE DRAWING ABOVE. ATTACH THE JUTE MESH TO THE WELDED MESH FACING USING UV-RESISTANT CABLE TIES.
3. STABILISE THE WHOLE STRUCTURE WITH SANDBAG OR ROCK ANCHORING OVER THE TRENCH MESH AND THE LEADING EDGE OF THE JUTE MESH. THE ANCHORING SHOULD BE SUFFICIENTLY LARGE TO ENSURE STABILITY OF THE STRUCTURE IN THE DESIGN STORM EVENT, USUALLY THE 10 YEAR EVENT.

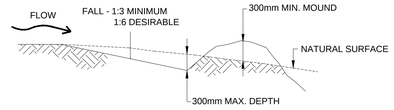


TYPICAL SECTION THROUGH SEDIMENT BASIN
N.T.S.

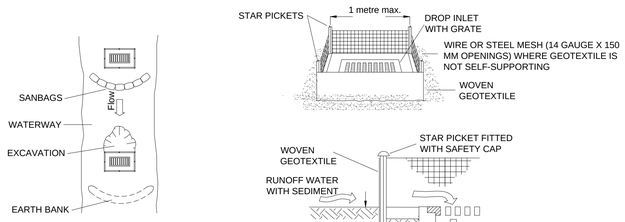
NOTE:
BASIN SIZE AND DEPTH TO SUIT EXCAVATION CONSTRAINTS



TEMPORARY CONSTRUCTION EXIT/ENTRANCE
N.T.S.



CATCH DRAIN
N.T.S.

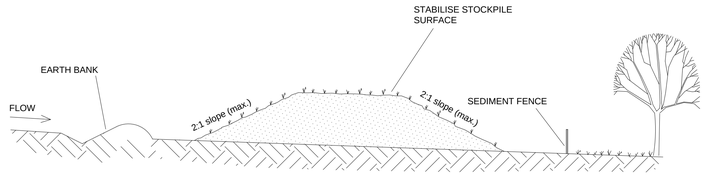


FOR DROP INLETS AT NON-SAG POINTS, SANDBAGS, EARTH BANK OR EXCAVATION USED TO CREATE ARTIFICIAL SAG POINT

CONSTRUCTION NOTES

1. FABRICATE A SEDIMENT BARRIER MADE FROM GEOTEXTILE OR STRAW BALES.
2. FOLLOW STANDARDS DRAWING 6-8 FOR INSTALLATION PROCEDURES FOR GEOFABRIC. REDUCE THE PICKET SPACING TO 1 METRE CENTRES.
3. IN WATERWAYS, ARTIFICIAL SAG POINTS CAN BE CREATED WITH SANDBAGS OR EARTH BANKS AS SHOWN IN THE DRAWING.
4. DON NOT COVER THE INLET WITH GEOTEXTILE UNLESS THE DESIGN IS ADEQUATE TO ALLOW FOR ALL WATERS TO BYPASS IT.

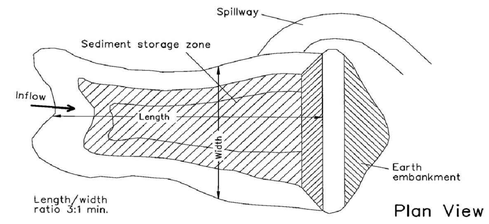
GEOTEXTILE INLET FILTER
N.T.S.

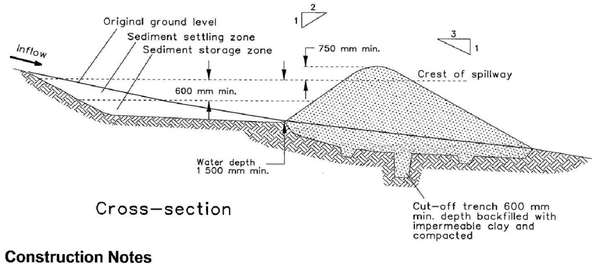


CONSTRUCTION NOTES

1. PLACE STOCKPILES MORE THAN 2 (PREFERABLY 5) METRES FORM EXISTING VEGETATION, CONCENTRATED WATER FLOW, ROADS AND HAZARD AREAS.
2. CONSTRUCT ON THE CONTOUR AS LOW, FLAT, ELONGATED MOUNDS.
3. WHERE THERE IS SUFFICIENT AREA, TOPSOIL STOCKPILES SHALL BE LESS THAN 2 METRES IN HEIGHT.
4. WHERE THEY ARE TO BE IN PLACE FOR MORE THAN 10 DAYS, STABILISE FOLLOWING THE APPROVED ESCP OR SWMP TO REDUCE THE C-FACTOR TO LESS THAN 0.10.

STOCKPILES
N.T.S.





Construction Notes

1. Remove all vegetation and topsoil from under the dam wall and from within the storage area.
2. Construct a cut-off trench 500 mm deep and 1,200 mm wide along the centreline of the embankment extending to a point on the gully wall level with the riser crest.
3. Maintain the trench free of water and recompact the materials with equipment as specified in the SWMP to 95 per cent Standard Proctor Density.
4. Select fill following the SWMP that is free of roots, wood, rock, large stone or foreign material.
5. Prepare the site under the embankment by ripping to at least 100 mm to help bond compacted fill to the existing substrate.
6. Spread the fill in 100 mm to 150 mm layers and compact it at optimum moisture content following the SWMP.
7. Construct the emergency spillway.
8. Rehabilitate the structure following the SWMP.

Run Log for Mudgee Hospital run at 11:58:40 on 30/5/2018										
Upwelling occurred at: A4, C1, A13, A6, A9										
Freeboard was less than 0.15m at A10, A3, A7, A11, A12, B1, B2, A15										
Flows were safe in all overflow routes.

Run Log for Mudgee Hospital run at 11:49:40 on 30/5/2018												
Upwelling occurred at: Pit K1, Pit J4, Pit K4, Pit K2, Pit K3												
Freeboard was less than 0.15m at Pit J5, Pit J6, Pit J7, Pit J3												
Flows were safe in all overflow routes.												
These overflow routes carried water uphill (adding energy): OF K1-H8. These results may be invalid. You should check for water flowing round in circles (e.g. negative flow in adjacent pipes) at these locations. You may need to reformulate the model.												
IGNORE THESE WARNINGS AT YOUR OWN PERIL.\cf1
