HANSENYUNCKEN

Construction Environmental Management Plan (CEMP)

Project: Epping West Public School Alterations and Additions

Job No: SC134

Rev: 5 | April 2022

Uncontrolled Document in Hard Copy

Copies shall not be made without the written permission of Hansen Yuncken Project Manager

Hansen Yuncken would like to acknowledge the Wallumedegal people as the traditional custodians of the land where the project is located. We honour elders past, present and emerging whose knowledge and wisdom has and will ensure the continuation of cultures and traditional practices.

EMP Preparation Checklist - Condition B15 - CEMP

Use the checklist below to help develop an EMP that contains all the required information. The checklist should be completed and supplied to the Department with the EMP. One checklist should be submitted for each EMP.

Requirement	Plan Reference	Yes/No/Not Applicable
Document preparation and endorsement		
Has the EMP been prepared in consultation with all relevant stakeholders as per the requirements of the conditions of consent? (Section 4.1)	Appendix.5 CPTMSP – Appendix.B Traffic Management Strategy	Yes
	Appendix.6 CNVMSP – <u>Appendix.C</u> Community Consultant Summary Report	
	Appendix.7 CSWMSP – <u>Appendix.2</u> Consultation Form	
Have the views of the relevant stakeholders been taken into consideration? Have appropriate amendments been made to the EMP and does the EMP clearly identify the location of any changes? (Section 4.1)	Appendix.5 CPTMSP – 4.26 CPTMP Approval, Monitoring and Review, <u>5</u> TGS Confirmation and Approval, Appendix.B Traffic Management Strategy	Yes
	Appendix.6 CNVMSP – <u>Appendix.C</u> Community Consultant Summary Report	
	Appendix.7 CSWMSP – <u>Appendix.2</u> Consultation Form	
Has the EMP been internally approved by an authorised representative of	1.2 Change Information	Yes
the proponent or contractor? (Section 4.2)	Appendix.5 CPTMSP – Document Control	
	Appendix.6 CNVMSP – Document Control	
	Appendix.7 CSWMSP – Document Control	
	Appendix.8 CWMSP – Document Control	
Version and content		
Does the EMP describe the proponent's Environmental Management System (EMS) (if any), and identify how the EMP relates to other documents required by the conditions of consent? (Section 3.5.1)	4.3 EMP Interrelationship with PMP	Yes
Does the EMP include the required general content and version control	1.2 Change Information	Yes
information? (Section 3.1)	Appendix.5 CPTMSP – Document Control	
	Appendix.6 CNVMSP – Document Control	
	Appendix.7 CSWMSP – Document Control	
	Appendix.8 CWMSP – Document Control	
Does the EMP have an introduction that describes the project, scope of	4.1 Scope & Application	Yes
works, site location and any staging or timing considerations? (Section 3.2)	4.2 Project Description	
	Appendix.13 Site Layout Plan and Staging Plan	
	4.2.1 Hours of Work	
Does the EMP reference the project description? (Section 3.3)	4.2.1 Hours of Work 4.2 Project Description	Yes
Does the EMP reference a Community and Stakeholder Engagement Plan	5.18.1 Community Consultation	
(or similar) or include community and stakeholder engagement actions (if required)? (Section 3.4)	Appendix.5 CPTMSP – <u>4.21</u> Method of Communicating Traffic Changes	Yes
	Appendix.6 CNVMSP – <u>Appendix.D</u> Community Communication Strategy (CCS)	

In a self-all and a s	A	
Have all other relevant approvals been identified? Has appropriate	Appendix.5 CPTMSP – 4.26 CPTMP	Vez
information been provided regarding how each approval is relevant? (Section 4)	Approval, Monitoring and Review, <u>5</u> TSG Confirmation and Approval	Yes
(Section 4)	13G Commination and Approval	
	N/A – HY have contacted Council in	
	relations to bonds and confirmed no	
	bonds are required	
	Appendix.7 CSWMSP – Appendix.2	
Has the environmental management structure and remonsibilities have	Consultation Form	Vos
Has the environmental management structure and responsibilities been included? (Section 3.5.2)	4.8 Roles and Responsibilities	Yes
miciadea: (Section 5.5.2)	5.3 Environmental Risk Register	
Does the EMP include processes for training of project personnel and	5.1 Environmental Awareness	.,
identify how training and awareness needs will be identified? (Section 3.5.3)	Amondiu F CDTMCD 4 19 Stoff	Yes
	Appendix.5 CPTMSP – 4.18 Staff Induction	
Does the EMP clearly identify the relevant legal and compliance	4.7.3 Legal Compliance and Other	
requirements that relate to the EMP? (Section 3.5.3)	Requirements	
requirements that relate to the Livii . (Section 3.3.3)	Requirements	
	Appendix.5 CPTMSP – <u>4.5</u> General	Yes
	Requirements	
	Appendix.6 CNVMSP – <u>4</u> Noise and	
	Vibration Criteria	
	Appendix.7 CSWMSP – <u>1.3</u> Design	
	Standards, Policies and Guidelines	
	Standards, Folicies and Guidennes	
	Appendix.8 CWMSP – <u>5</u> NSW	
	Legislative Requirements and	
	Guidelines	
Does the EMP include all the conditions of consent to be addressed by the	3 Compliance with SSD Conditions	
EMP and identify where in the EMP each requirement has been		
addressed? (Section 3.5.13)	Appendix.5 CPTMSP – <u>1.3</u>	
	Compliance with Conditions of	
	Consent	
	Appendix.6 CNVMSP – <u>1.2</u> SSD	Yes
	Compliance	. 65
	Compliance	
	Appendix.7 CSWMSP – <u>1.4</u>	
	Compliance with Conditions of	
	Consent	
	Appendix.8 CWMSP – <u>5.2</u> SSDA	
	Condition B12e and B15a,b,c	
	Requirement	
Have all relevant guidelines, policies and standards been identified,	4.7.3 Legal Compliance and Other	
including details of how they are relevant? (Section 3.5)	Requirements	
	Appendix.5 CPTMSP – 4.5 General	
	Requirements	
	,	
	Appendix.6 CNVMSP -4 Noise and	Yes
	Vibration Criteria	
	Appendix.7 CSWMSP – <u>1.3</u> Design	
	Standards, Policies and Guidelines	
	Appendix.8 CWMSP – <u>5</u> NSW	
	Legislative Requirements and	
	Guidelines	
Is the process that will be adopted to identify and analyse the environmental risks	6 Measurement & Evaluation	
included? (Section 3.5.5)		Yes
	Appendix.5 CPTMSP – <u>4.24</u> Hazard	
	and Risk Identification	
	Appendix.6 CNVMSP – 4 Noise and	
	Vibration Criteria	
	Appendix.7 CSWMSP – 2 Construction	
	Soil and Water Management	
	Appendix.8 CWMSP – N/A	
	pp :	

Have all the environmental management measures in the EIA been directly		
reproduced into the EMP? (Section 3.5.7) Have any additional environmental management measures been included	6 Measurement & Evaluation	Yes
n the EMP? (Section 3.5.7)	Appendix.5 CPTMSP – N/A	
	Appendix.6 CNVMSP – <u>6.7</u> General Mitigation Measures	
	Appendix.7 CSWMSP – N/A	
	Appendix.8 CWMSP – <u>6.4</u> On-site Waste Management Requirements	
Have environmental management measures been written in committed anguage? (Section 3.5.7)	5 Implementation	Yes
Have project environmental management measures, including hold points, been identified and included? (Section 3.5.6)	5.3 Environmental Risk Register	Yes
Are relevant details of environmental monitoring that will be carried out included? (Section 3.5.8)	5.5.1 Tools and Noise Monitoring Procedures	Yes
	5.12.5 Waste Reporting	
	Appendix.5 CPTMSP – <u>4.26</u> CPTMP Approval, Monitoring and Review	
	Appendix.6 CNVMSP – <u>6.2.2</u> Noise Monitoring, <u>6.3.2</u> Vibration Monitoring	
	Appendix.8 CWMP – <u>7</u> Waste Management Plan Application	
Have the components of any environmental monitoring programs been incorporated? (Section 3.5.8)	Appendix.5 CPTMSP - 4.26 CPTMP Approval, Monitoring and Review	Yes
	Appendix.6 CNVMSP – <u>6.2.2</u> Noise Monitoring, <u>6.3.2</u> Vibration Monitoring	
	Appendix.8 CWMP – <u>7</u> Waste Management Plan Application	
Are environmental inspections included? (Section 3.5.9)	6.2 Environmental Inspections & Audits	Yes
Does the EMP document all relevant compliance monitoring and reporting requirements for the project? (Section 3.5.12 and 3.5.13)	6.2.2 Reporting & Corrective Actions	Yes
Does the EMP describe the types of plans or maps (such as environmental control maps) that will be used to assist with the management of environmental matters on site? (Section 3.5.10)	Appendix.5 CPTMSP – Appendix.A Swept Path Assessment, Appendix.B Traffic Management Strategy, Appendix.C Drivers Code, Appendix.D Construction Worker Transportation Strategy, Appendix.E TGS	Yes
	Appendix.6 CNVMSP – <u>Appendix.C</u> CSSR, <u>Fig 1</u> Site Map, <u>Fig 3</u> Required Community Notification Area	
	Appendix.7 CSWMSP – <u>Appendix.1</u> Sediment and Erosion Control Plans, <u>Appendix.2</u> Consultation Form	
	Appendix.8 CWMSP – Appendix.A Waste Collection Area and Waste Bin Truck Access and Egress, Appendix.B HBM Survey	
Does the EMP list environmental management documents? (Section 3.5.11)	Appendix.2 EMA	Yes
(Section 3.3.11)	Appendix.4 HSE Project Risk Assessment	
	Appendix.9 Waste Classification	
	Appendix.11 External Lighting Compliance	
	Appendix.12 SIE Summary	
	Appendix.14 Covid Management Plan	

Is an auditing program referenced? (Section 3.5.13)	Appendix.15 HY HSE Audit	Yes
Does the EMP include the incident notification and reporting protocols that comply with the relevant conditions of consent? (Section 3.5.15)	6.1 Environmental Incidents & Emergencies	Yes
Does the EMP identify the project role/position that is responsible for deciding whether an occurrence is an incident? (Section 3.5.15)	4.8 Roles and Responsibilities	Yes
Does the EMP describe a corrective and preventative action process that addresses the requirements? (Section 3.5.16)	6.2.2 Reporting & Corrective Actions	Yes
Does the EMP include details of a review and revision process that complies with the requirements? (Section 3.6)	4.4 Policy and Objectives	Yes

Compliance with SSD Conditions

Condition ID	Requirement	Reference
B12	Prior to the commencement of demolition, removal of buildings or construction, the Applicant must submit a Construction Environmental Management Plan (CEMP) to the Certifier and provide a copy to the Planning Secretary for information. The CEMP must include, but not be limited to, the following;	
B12(a)	(a) Details of:	
B12(a)i)	(i) hours of work	4.2.1 – Pg.8
B12(a)ii)	(ii) 24-hour contact details of site manager	4.2.2 – Pg.9
B12(a)iii)	(iii) management of dust and odour to protect the amenity of the neighbourhood	5.7 – Pg.19
B12(a)iv)	(iv) external lighting in compliance with AS 4282-2019 Control of the obtrusive effects of outdoor lighting	5.17 – Pg.30 A.11
B12(a)v)	(v) community consultation and complaints handling as set out in the Community Communication Strategy required by condition B7	5.18 – Pg.31
B12(b)	(b) An unexpected finds protocol for Aboriginal and non-Aboriginal heritage and associated communications procedure	5.11.8 – Pg.25
B12(c)	(c) Construction Traffic and Pedestrian Management Sub-Plan (see condition B13)	A.5
B12(d)	(d) Construction Noise and Vibration Management Sub-Plan (see condition B14)	A.6
B12(e)	(e) Construction Waste Management Sub-Plan (see condition B15)	A.8
B12(f)	(f) Construction Soil and Water Management Sub-Plan (see condition B16).	A.7

For all SSD Conditions, refer to appendix A.10.

Epping West Public School Alterations and Additions

4 Commitment & Policy

4.1 Scope & Application

The Construction Environmental Management Plan (CEMP) has been developed to demonstrate that the proposed Works will be executed in accordance with legislated safety and environmental requirements with minimal inconvenience to stakeholders including neighbours and the general public.

Hansen Yuncken, appointed as Principal Contractor in accordance with NSW WHS legislation, complies with the requirements detailed in this Construction Management Plan, as well as the requirements of any other legislation or statutory bodies.

A combination of offsite and onsite construction techniques will be used to deliver a high quality, future focused innovative, state of the art school. Meeting the current and future school and community needs whilst complying with the requirements as detailed in the Educational Facilities Standards and Guidelines (EFSG) and providing a high level of end user satisfaction.

This EMP has been generated to satisfy the requirements of "ISO 14001:2015, Environmental management systems – Requirements with guidance for use" and the "NSW Government Environmental Management System Guidelines – 3rd edition". It establishes guidelines and controls for all HY activities that may impact the surrounding environment for the duration of the works, including but not limited to; air, water, land, natural resource use & waste, flora & fauna, and their respective interrelationship. Furthermore, it has been designed to embrace the environmental management requirements, both in terms of the Contract and generally, to demonstrate HY as an environmentally responsible organisation to the broader community.

4.2 Project Description

The proposed development is alterations and additions to an existing educational establishment at 96 Carlingford Road, Epping. In summary, the proposed works will include:

- · Demolition works;
- Construction of a three (3) storey building in the south-eastern corner of the site and a two (2) storey building further north adjacent to the site's eastern boundary;
- Refurbishment and renovation works to existing buildings, with a small addition to the western side of an existing building;
- Removal of demountable buildings currently located predominantly on the northern part of the site and associated make good works to reinstate the oval and play space which is predominantly on the northern part of the site.

An existing building known as Building G (located between buildings F and H) is proposed to be demolished, Building G is a single storey classroom building.

4.2.1 Hours of Work

The proposed hours of work for the project, align to Condition B12(a)i) and C4 of SSD 9250948, and are as follows:

- Monday–Friday 7am 6pm
- Saturday 8am 1pm
- Sunday Nil

Epping West Public School Alterations and Additions

The proposed restricted hours of work for the project, provided that noise levels do not exceed the existing background noise level plus 5dB, which aligns to Condition C5 of SSD 9250948, are as follows

- Monday–Friday 6pm 7pm
- Saturday 1pm 4pm

The proposed hours of work for the project for specific construction activities such as rock breaking, rock hammering, sheet piling, pile driving and similar activities, which align to Condition C8 of SSD 9250948, are as follows:

- Monday–Friday 9am 12pm & 2pm 5pm
- Saturday 9pm 12pm

4.2.2 24 Hour Contact Details

The 24-hour contact details for the project are as follows:

Justin Sut - Project Manager

M: 0408 507 855

JSut@hansenyuncken.com.au

Ross Cannavo - Site Manager

M: 0417 107 706

RCannavo@hansenyucnken.com.au

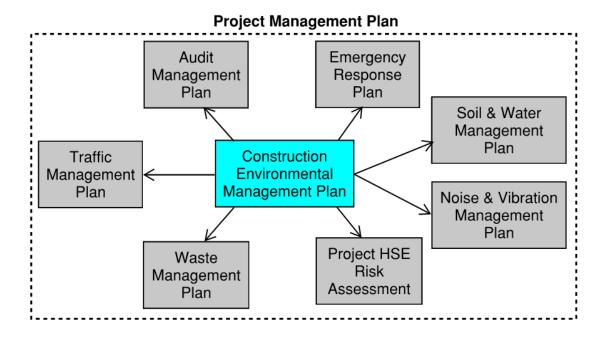

The given contact details are in accordance with Condition B12(a)ii) of SSD 9250948.

4.3 EMP Interrelationship with PMP

This EMP forms part of Hansen Yuncken's Environmental Management and interfaces with the company's Quality & WHS Management Systems. Furthermore, this EPM is an integral part of the Epping West Public School Alterations and Additions PMP. The following plans referenced within this EMP form part of the overall PMP for the project and contribute to the environmental management procedures:

- Project Site Induction Ensures all workers onsite are aware of the Environmental Management Plan & also trains all workers onsite on the requirements for controlling: dust & windblown debris, dirt & debris on public roads, protection of stormwater drains, tool & equipment washout, chemical spills, noise disturbance, waste collection & disposal, rubbish & food scraps & excess concrete.
- Project HSE Risk Assessment Identifies what subcontractor onsite are impacted by or the risk of; air quality/dust, archaeology & cultural heritage, chemical spill, flora & fauna, littering, noise disturbance, stormwater contamination & watercourse pollution each month. This will be monitored through task observations scheduled for each month.
- Noise & Vibration Management Plan Identifies mitigation methods to minimise the risk of noise
 & vibration to the workers onsite and the surrounding properties.
- Traffic & Pedestrian Management Plan Summarises how construction and pedestrian traffic will be managed on the project to minimise the impact on the existing facility and the neighbours surrounding to the project.
- Site Layout Plan Identifies the location of sediment controls, access routes, truck washout, location of site bins, spill kits, concrete washout.
- Emergency Response Plan Outlines the process to manage the following environmental emergencies; asbestos exposure, water pollution, fire, major fuel spill & chemical spill
- Audit Management Plan Describes the frequency of internal and external environmental audits and the process for closing out any non-conformances raised.

4.4 Policy & Objectives

The HY Environmental Policy Statement provides the framework for the development of this EMP (refer Appendix A.1), and details the company's commitment to "providing a high quality environment, which meets the requirements and expectations of; Clients, Statutory Authorities, Employees and Community Groups", through the application of "sustainable development principles, to continually improve environmental performance in minimising impact on, and pollution of, the environment during the construction process".

The objective of the Environmental Management Plan is to:

- Satisfy Client requirements related to environmental performance, set out in the Specification for the Works.
- Incorporate and provide mitigation strategies for environmental issues arising from site activities and as detailed in the Epping West Public School Alterations and Additions Environmental impact assessment document (Environmental Impact Statement SSD 9250948)
- Encourage best practice environmental management through planning, commitment and continuous improvement;
- Prevent and minimize adverse impacts on the environment;
- Identify the potential for, and respond to, environmental incidents and emergency situations and take corrective actions;
- Identify and control possible environmental hazards with the works and HY activities;
- Identify and protect any special environmental characteristics of the site including cultural heritage significance;
- Define roles and responsibilities and allocate the necessary resources
- Ensure environmental training and awareness programmes are provided to employees and subcontractors;

Epping West Public School Alterations and Additions

Establish mechanisms to monitor, evaluate and report progress.

The HY Environment Policy commits the company to achieve the following goals:

- Develop and promote a culture of environmental leadership, responsibility and continual improvement across the HY business;
- Audit, monitor and ensure compliance with environmental legislative and regulatory obligations and other environmental commitments;
- Utilise the resources of HY to lead the way in defining and achieving best environmental practice;
 and
- Advance and disseminate environmental knowledge and applied environmental management through training, research and engagement with the wider community

A copy of the Environment Policy is contained within the PMP and displayed at the project / site office and induction sheds. HY recognises this implementation will involve effective training of personnel to ensure they fully understand their responsibilities to comply with and monitor the management system. In addition, all site workers are consulted on HY environmental policies & procedures through the following mechanisms; site induction, notice board, site inspections, prestart meetings, subcontractor meetings, team meetings, toolbox talks.

4.5 Targets

4.5.1 Objective: Comply with all environmental legislation

KPI: Number of identified breaches of State or Commonwealth Environmental legislation

Target: Nil for duration of project.

Responsibility: HY & Subcontractors

4.5.2 Objective: Minimise impacts on the environment

KPI: Number of significant environmental incidents causing serious harm to the environment

Target: Nil for duration of project.

Responsibility: HY & Subcontractors

4.5.3 Objective: Conduct environmental site inspections to validate environmental conformance

KPI: Schedule and undertake regular site inspections

Target: > 90% of scheduled HSE inspections

Responsibility: HY Site Manager

4.5.4 Objective: Minimise and manage environmental complaints

KPI: Consult with impacted neighbours and promptly address all complaints

Target: ≤ 1 complaint per significant construction milestone

Responsibility: Johnstaff

Epping West Public School Alterations and Additions

4.6 ESD Vision & Principles

The project provides an opportunity for HY to expand its practical and theoretical knowledge of ESD to a level that is considered 'best practice' status.

As such, the ESD vision and principles for HY involves:

- Identification and prioritisation of environmental risk based on AS/NZS ISO 31000:2009 and Guidelines HB158:2010, using qualitative likelihood vs. consequence methods.
- Development of management systems which build knowledge and capacity on environmental issues, principles and sustainable behaviours including training and communication.
- Reduced energy and water consumption as well as waste minimisation during the construction process.
- Environmental training and management of trade contractor's activities to ensure that the project ESD objectives are obtained.
- Efficient and effective use of natural resources in a way that maintains the ecological processes on which life depends
- Sustainable use of renewable energy resources.

4.7 Environmental Planning

In accordance with the contractual requirements, applicable legislation, and in keeping with proper environmental practices, Hansen Yuncken has instituted a methodology which is reflective of observes the requirement, as set out in ISO 14001:2015.

4.7.1 Environmental Aspects & Impact

All activities related to the Epping West Public School Alterations and Additions, which are enacted by or on behalf of Hansen Yuncken, are identified in the "Project HSE Risk Assessment" (refer Appendix A.4). For each activity the environmental aspects and associated actual and potential impacts are identified as they relate to the following environmental elements:

- Location and Land Use;
- Noise & Vibration;
- Traffic and Access;
- Air Quality;
- Soils, Erosion and Water Quality;
- Terrestrial Flora and Fauna;
- Cultural Heritage;
- Site Contamination; and
- Waste Management.

Environmental impacts are detailed in the "**Project HSE Risk Assessment**" and assessed for significance by using the Risk Matrix. Each identified potential impact is rated (Risk rating) in relation to its predicted likelihood and consequence. Environmental Impacts as applicable to the Epping West Public School Alterations and Additions are summarised in the "Environmental Risk Register" contained within this CEMP (Section 4.3).

Epping West Public School Alterations and Additions

4.7.2 Work Method Statements

For each activity rated as a significant risk (i.e. Risk class >M/Medium) to the environment, a further Risk assessment is undertaken with the additional controls identified and contained within a Work Method Statement. This document details the; steps involved, hazards, control measures and persons responsible associated with the higher risk activity. A Tool Box talk is then completed with the relevant workers that will be completing the task to ensure that they comply with the Work Method Statement.

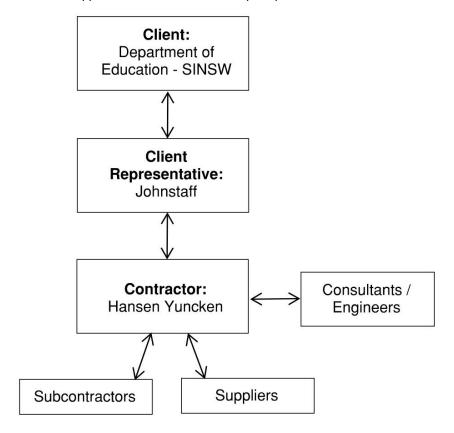

4.7.3 Legal Compliance and Other Requirements

Hansen Yuncken has developed a procedure ("Legislation Standards and Codes of Practice"), available on HYWAY to identify legal and other requirements that are applicable to the Epping West Public School Alterations and Additions and to ensure the accessibility of the information. The procedure shall be referenced and is applicable to those activities and functions that have the potential to interact with the environment.

Furthermore (URL) links are supplied on HYWAY to regulatory body websites and relevant NSW legislation relevant to environmental Aspects and management of the same.

4.8 Roles and Responsibilities

The below flow chart summarises the organisation structure for communication and reporting between Hansen Yuncken, it's suppliers/subcontractors and the principal.

Hansen Yuncken will collaborate with the project team to provide the following in ensuring we are achieving sustainable environmental management for the duration of the project:

- Engagement with project stakeholders including consultants and contractors
- Notifications and communications with adjacent property occupants and owners advising of the Works:
- Formal notices of road closures and related matters:

HANSENYUNCKEN

Construction Environmental Management Plan (CEMP)

Epping West Public School Alterations and Additions

- Conveying enquiries and complaints regarding the works (including but not limited to traffic, dust and noise) to the client;
- Liaising with key stakeholders and local authorities regarding the works; and
- Environmental issues related to the works.

A summary of the roles and responsibility of each stakeholder with regards to environmental management for the project is summarised below:

- Client Representative provides a medium of communication between the client and the contractor and is responsible for all community consultation and communication
- Contractor responsible for delivering the project in accordance with the relevant legislation, including the enforcement of the CEMP for it's subcontractors and suppliers.
- Consultants/Engineers provide expert knowledge into the generation of aspects of the CEMP in line with industry standards and the relevant legislations.
- Subcontractor/Suppliers responsible to abiding by the requirements of the CEMP when carrying out their contract works.

4.9 Environmental Hold Points

The below hold points are directly correlated to the environmental management of the Epping West Public School Alterations and Additions project site:

- C20a): Street trees must not be trimmed or removed unless it forms a part of this development
 consent or prior written approval from Council is obtained or is required in an emergency to avoid
 the loss of life or damage to property.
- C24: written approval of Council must be obtained to connect or discharge site stormwater to Council's stormwater drainage system or street gutter
- C27: Unexpected Finds Protocol Aboriginal Heritage, In the event that surface disturbance identifies a new Aboriginal object works shall only recommence with the written approval of Planning Secretary.
- C28: Unexpected Finds Protocol Historic Heritage, . If any unexpected archaeological relics are uncovered during the work, then works may only recommence with the written approval of the Planning Secretary

Epping West Public School Alterations and Additions

5 Implementation

5.1 Environmental Awareness

All HY and S/C employees shall receive an induction into the project in accordance with the Site Induction procedure including completing the Site Induction Record Form (FM-CORP-HSE-001).

The induction shall include the requirements for the conduct of activities which have the potential for significant environmental impacts on the project which shall be outlined in the project specific Site Induction Handbook.

This document applies to all HY and S/C employees, environmental awareness is the responsibility of every person working on and associated with the project.

5.2 Environmental Impacts of Subcontractor Activities

The environmental impacts of subcontractor activities shall be assessed during the S/C pre-award meeting in accordance with pre-award meeting procedure and the project HSE risk assessment. The general structure of the environmental management of the following risks is contained within this section of the report under the following structure:

- 1. Likely Impacts outlines the impacts of the environmental issues that have been assessed in the environmental risk register
- 2. Mitigation Strategies outline the procedures/actions that will be taken to minimise the possibility of the impacts outlined above from occurring.

5.3 Environmental Risk Register

Environmental Risk Register Summary & Responsibilities				
Environmental Issue	Risk to Project	Responsible Personnel		
Location & Land use Residential and other properties may be impacted with construction works due to construction noise and dust	Low	PM		
Noise & Vibration Construction of the development may result in short term impacts during the project due to the use of heavy machinery, drilling and plant as well as construction personnel and vehicle movements.	Low	PM / SM		
Traffic & Access During construction there will be impacts to traffic on public roads surrounding the project from construction vehicles and deliveries for site.	Medium	PM / SM		

Environmental Risk Register Summary & Responsibilities				
Air Quality During the earthworks stage of the project, there is a risk of poor air quality generated by the constructions works.	Low	SM		
Soils, Erosion, & Water Quality There is a risk of soil leaving the site and potentially contaminating the stormwater system in the short-term during the earthworks stage of the project.	Low	SM		
Terrestrial Flora & Fauna The removal of trees during construction works poses minimal risk to landscaped species throughout the area. Particular trees have been flagged for removal. These shall be marked and checked prior to any removal.	Low	PM / SM		
Cultural Heritage It is unlikely that construction works will impact any undisturbed aboriginal artefacts given that the Aboriginal Cultural Heritage Assessment completed by GML Heritage concludes that no permits are required for the Epping West Public School Alterations and Additions, as all work impacts are outside areas with potential cultural heritage values.	Low	PM / SM		

PM - Project Manager, SM - Site Manager, FM - Foreman, S/C - Subcontractor, PCA - Private Certifier

5.3.1 Sub-Plan Risks Safeguard / Mitigations Register

Sub-Plan Safeguard / Mitigations Register			
Actions	Person/s Responsible	Timing / Frequency	Document Source
 Location & Land Use (Geotechnical) The engineering properties (e.g., plasticity, reactivity, CBR, etc.) of any fill imported to the site will be equivalent, or superior, to the existing materials on site. Vibration trials and continuous monitoring will be undertaken if heavy equipment or rock hammers are to be used near sensitive structures. All footings and bored piles will be inspected by an experienced geotechnical professional during construction to check the adequacy of the foundation material and, in the case of piles, to check the socket cleanliness and roughness. Serviceable analysis will be undertaken if the ultimate bearing pressures are used to proportion the piles. Seepage should be removed from excavations prior to pouring concrete Refer to CEMP Section. 	Project Manager	As required	EIS Section 6.10 Appendix 11 CEMP 5.4 Location and Land Use
 Noise and Vibration A Construction Noise Management Plan, to be implemented by the Contractor, will be prepared that clearly identifies the strategies to be put in place to minimise potentially adverse noise impacts upon the surrounding community (including the school). The developer will inform all potentially impacted residents of the nature of works to be carried out, the expected noise levels and duration, as well as contact details. Where all feasible and reasonable practices have been applied and noise is more than 5dB(A) above the noise affected level, the proponent should negotiate with the community. The quietest feasible construction equipment will be selected. 	Project Manager Site Manager	Continuous unattended monitoring	EIS Section 6.6 Appendix 36 CNVMSP 6 Noise and Vibration Management Plan

 Ripping will be used where rock removal is required. Localised treatment, such as barriers, shrouds and the like will be used around fixed plant, such as pumps and generators. Provision of respite periods will be utilised, particularly on Saturdays. Plant Noise Audit – Noise emission levels of all critical items of mobile plant and equipment will be checked for compliance with noise limits appropriate to those items prior to the equipment going into service. To this end, testing will be established with the Contractor. Operator Instruction – Operators will be trained to raise their awareness of potential noise problems and to increase their use of techniques to minimise noise emission. Equipment Selection – All fixed plant at the work sites will be appropriately selected, and where necessary, fitted with attenuators, acoustical enclosures and other noise attenuation measures to ensure that the total noise emission from each work site complies with EPA guidelines. Site Noise Planning – Where practical, the layout and positioning of noise-producing plant and activities will be optimised to minimise noise emission levels. General Management Measures Project Notification Verification Monitoring Complaints Management System Specific Notification Respite Offer Alternative Construction Methodology 			
All plant and machinery involved in the works will be regularly serviced and checked for exhaust emissions and catalytic converters. Refer to CEMP Section 5.7.	Site manager	As required	EIS Appendix 33 CEMP 5.7 Air Quality & Dust Control
Sediment diverting measures such as sandbags and fabric filters will to used to minimise sediment reaching Council's stormwater drainage networks.	Site Manager	As required	EIS Section 6.8 CSWMSP 2.1 Water Quality

•	areas where natural ventilation cannot be achieved.			
•	Removed native vegetation will be separated from general construction waste, mulched and stockpiled for reuse.			
•	Tree works will to be undertaken by an experienced and qualified arborist.			
•	A Level 5 AQF Project Arborist experienced in managing trees on construction sites will be appointed to prepare and certify a Tree Management Plan.			
•	Appropriate Tree Protection Fence to enclose and protect the TPZ will be installed.			
•	Additional root, trunk and branch protection as required to protect retained trees where			

minor encroachments within the TPZ are anticipated is to be installed. Any activity that is likely to damage trunk, crown or root systems are prohibited within a TPZ. In the event of damage to a tree or the TPZ of a tree to be retained, the Project Arborist will be engaged to inspect and provide advice on remedial action. All fill material to be placed within the TPZ will be approved by an Arborist. Proposed paved areas within the TPZ will be placed on or above grade to minimise excavation and avoid root severance and/or damage. In the event of any tree deteriorating in health after the construction period, the Project Arborist will be engaged to provide advice on any remedial action. Refer to CEMP Section.			
 Aboriginal Heritage An Aboriginal Cultural Heritage Induction detailing the zones of heritage sensitivity, as well as description of how to identify unexpected artefacts during work, will be prepared by either a qualified heritage consultant or a project RAP. An unexpected finds procedure should be written as part of a concise Aboriginal Cultural Heritage Induction, which will be delivered to all site workers before the commencement of on-site work Refer to CEMP Section. 	excess dust or debris being deposited onto the roadway during travel to and from the site. The Head Contractor will induct all subcontractors and suppliers to ensure that the procedures are met for all vehicles entering and exiting the construction site. All vehicles should enter and leave the site in a manner that eliminates interaction between pedestrians and the public. The Head Contractor will monitor the internal and immediate external roads leading to and from the site and take all necessary steps to clean any debris deposited by construction vehicles. Public roads and access points will not be obstructed by any materials, vehicles, refuse skips or the like under any circumstances without authority approval. Heavy vehicles will generally arrive and depart outside of peak traffic periods. Subcontractor deliveries will not be taken between the times of 8:00am—9:30pm, and 2:30pm—4:00pm. Construction and delivery vehicles entering or leaving the site will use arterial roads wherever possible. Pedestrians will be safely directed during the construction of temporary and final crossovers by temporary fencing and		Shift TTM Inspections Client Inspections	EIS Section 6.3 Appendix 31

	during construction.		
•	Refer to CEMP Section.		

5.4 Location and Land Use

5.4.1 Site Location

The proposed development is located in the suburb Epping on a lot bounded by Ward Street to the east, and Carlingford Road to the south. The site for the proposed development is comprised of 3 deposited plans (D.O. 1099882, D.P. 161495, D.P. 122509). It is located within the Epping West Precinct in the local government area (LGA) of Parramatta and is part of the South West Priority Growth Area. The site has an area of approximately 20,810m2 and forms an irregular rectangle shape. The site is situated approximately 20 kms northwest of the Sydney Central Businesses District (CBD), 8 kms northeast of Parramatta CBD, and 40 km southwest of Campbelltown CBD. (refer to Appendix A.3 for further information regarding site location).

5.4.2 Likely Impacts

The construction works would be short term in nature and would not interfere with the current use of the site. All construction activities would be carried out with due diligence, duty of care and best management practices. Given the location of residential and other properties in close proximity to the works area, some impacts associated with construction traffic, noise/vibration and dust are likely to affect adjacent residents. These likely impacts will be addressed below.

5.4.3 Mitigation Strategies

- The neighbouring landowners are to be consulted in regard to the construction works, predicted program and any access requirements.
- Land disturbance during construction is to be limited to that required to undertake the construction works
- Construction works to be undertaken in consideration of adjacent vegetation
- Areas disturbed during construction to be returned to the pre-construction condition
- The consent approval stipulates working times to minimise the impact on the community being generally Monday to Friday 7am-6pm, Saturday 8am-1pm, no work on Sundays or public holidays.

5.5 Noise and Vibration

5.5.1 Tools and Noise Monitoring Procedures (During Demolition Works)

- Unattended Continuous Noise Monitoring
 - Configure the permanent noise monitoring systems to continuously record LAeq, LA10, LA90,
 LA1 and LAmax statistical noise levels in 15-minute intervals.
 - During continuous monitoring, the noise loggers would be downloaded and serviced on a weekly basis or as required by VMS staff.
 - Prepare a concise noise assessment report of the results and findings.

5.5.2 Likely Impacts

Construction of the proposed development will result in short term noise impacts during the construction period. The predicted noise levels during the construction phase have been identified in the project

Epping West Public School Alterations and Additions

Construction Noise & Vibration Management Plan along with associated mitigation strategies that are to be adopted to minimise these impacts (refer Appendix A.6 for the Construction Noise & Vibration Management Plan) in accordance with Condition B12(d), and B14(a)-(d), of SSD 9250948.

5.5.3 Mitigation Strategies

The following mitigation strategies listed have been developed to control the level of noise and vibration that affect the relevant stakeholders:

- Site construction noise will be managed in accordance Construction Noise and Vibration
 Management Plan (CNVMP) developed for this project. The CNVMP is based on the proposed
 construction methodology, activities, durations and equipment type and numbers.
- Keep the community informed in relation to noise intensive activities in the immediate area. Refer to Communication Engagement Plan which is in accordance with Condition B14(e) of SSD 9250948.
- Provide consultation where prolonged or consecutive periods of construction works are planned.
- Construction activities shall be restricted to the hours dictated in the consent SSD 9250948.
 - The consent approval stipulates working times to minimise the impact on the community being generally Monday to Friday 7am-6pm, Saturday 8am-1pm, no work on Sundays or public holidays.
- Any noise complaint received will be investigated as soon as practicable. Any practicable and feasible measures to minimise noise will be identified and implemented if required. In accordance with Condition B14(f) of SSD 9250948.
- All possible steps to be taken to silence construction equipment where possible.
- Optimum siting of work areas, vehicle and plant parking areas, materials stockpiles and equipment storage areas in locations where potential acoustical impacts will be minimised.
- All plant and machinery used for the project shall be well maintained.
- Ensure workers and contractors are regularly trained (such as toolbox talks) to use equipment in ways to minimise noise
- "Quacker" reversing alarms to be used for plant vehicles if practicable.

For more detailed mitigation strategies related to specific work phases and the relevant mitigation strategies to be adopted, refer to the CNVMP (Appendix A.6).

5.6 Traffic & Access

5.6.1 Likely Impacts

Construction of the new site facilities shall see some increase in traffic in the local area. The increased traffic is not predicted to have an impact on local traffic flow and only a minor inconvenience to local road users is expected. Construction vehicle routes have been developed with the intention of minimising the impact of construction traffic on the local streets in the immediate vicinity. Access to site is anticipated to be primarily via Ward Street. In accordance with Condition B12(c), B13(a)-(d), and B17(a)-(d) of the SSD 9250948, the management of construction traffic developed as a result of these works in summarised in the Construction Traffic Management Plan (refer Appendix A.5).

In accordance with SSD 9250948. Condition B18, on-site parking facilities will be provided in line with the site layout plan contained within Appendix A.13.

5.6.2 Mitigation Strategies

Epping West Public School Alterations and Additions

Follow the Construction Traffic Management Plan (TMP) based on the detailed construction methodology and use of specific heavy vehicles and construction plant. The Traffic Management

- Plan is to include measures to minimise traffic impacts ensure public safety and is to be prepared in accordance with:
- Traffic Control at Work Sites Manual (RTA, 2010)

HANSFNYIINCKFN

- Australian Standard 1742.3 2002 Traffic Control Devices for Works on Roads.
- The TMP will be developed in consultation with NSW Roads & Maritime Services (RMS) and Paramatta City Council.
- The TMP will detail hours of operation, heavy vehicle volumes (numbers) and routes, construction staff parking, loading / unloading areas and site access arrangements, all temporary warning, guidance and information signage, and appropriate traffic control devices
- Notify surrounding land owners at least one week in advance of the works
- All vehicles accessing the sites will use the designated access roads
- All roads will be kept clean and free of dust and mud. Where material is tracked onto sealed road, it will be removed so that road pavements are kept safe and trafficable
- All vehicles transporting spoil onsite will be covered and filled to maximum capacity to minimise vehicle movements as required
- All roads, kerbs, gutters and footpaths damaged as a result of construction are to be restored to their pre-construction condition. A dilapidation report will be carried prior to construction
- A dedicated vehicle wash-down area will be established on site
- All traffic shall comply with all applicable traffic laws and regulations including speed limits. All construction vehicles shall comply with the speed limits set for the roads accessing the site
- All car park access arrangements for vehicles are to be in accordance with SSD 9250948.
- Construction activities shall be restricted to the hours dictated in the consent SSD 9250948.
 - The consent approval stipulates working times to minimise the impact on the community being generally Monday to Friday 7am-6pm, Saturday 8am-1pm, no work on Sundays or public holidays.
- During the project's demolition works, the following monitoring

5.7 Air Quality & Dust Control

In accordance with condition B12(a)iii) of SSD 9250948, repeated in part as follows; the Construction Environmental Management Plan (CEMP) which must include, but is not limited to, the following; (iii) management of dust and odour to protect the amenity of the neighbourhood. This section of the CEMP addresses this condition, outlining the likely impacts of air quality and dust control for the various aspect of the construction works, along with the mitigation strategies that will be implemented to minimise these impacts on the neighbourhood.

5.7.1 **Likely Impacts**

The main impact of air quality during construction is expected to arise from the generation of airborne localised dust associated with earthworks. Given the proximity to of neighbouring properties and existing buildings, there is the potential for impact by dust, particularly during windy conditions.

5.7.2 **Mitigation Strategies**

Epping West Public School Alterations and Additions

- Construction vehicles and equipment to be suitably serviced prior to commencement of construction activities and all necessary maintenance to be undertaken during the construction period to meet EPA air quality requirements.
- Excessive use of vehicles and powered construction equipment will be minimised where possible
- All construction machinery will be turned off when not in use to minimise emissions where possible.
- Construction contractors to monitor dust generation progressively.
- Dust suppression methods will be adopted where required (i.e. on windy days when earthworks and vehicle movements are generating dust). Examples of dust suppression methods include:
 - Water carts
 - Localised use of water to supress excavation activities as they are occurring to suppress dust
 - Covering stockpiles
- Any stockpiled spoil/fill will be protected to minimise dust generation to avoid sediment moving offsite.
- Vehicles transporting spoil from the site to be covered where required.
- The burning of waste materials will not be permitted on site

5.8 Soil, Erosion & Water Quality

In accordance with condition B16(b) & (f) of SSD 9250948, repeated in part as follows; the Construction Environmental Management Plan (CEMP) which must include, but is not limited to, the following; (b) stormwater control and discharge & (f) measured to ensure sediment and other materials are not tracked onto the roadway by vehicles leaving the site. This section of the CEMP addresses these conditions, outlining the likely impacts associated with stormwater runoff and the mitigation strategies that will be implemented to ensure that these impacts are minimised. Further to this, in accordance with condition B12(f), B16(a), (c), and (e), refer to Appendix A.7 for the Soil and Water Management Sub-Plan.

5.8.1 Likely Impacts

Earthworks and general ground disturbances associated with the site works may result in sediment and other materials leaving the site via wind or water movement. This may have the potential to result in the water pollution such as turbidity and nutrient inputs, should sediment wash into stormwater or natural drainage lines.

Aspects of the site identified as potentially impacting on water quality includes:

- Excavation for foundations and site levelling;
- Stockpiling and transportation of excess spoil; and
- General construction waste entering drainage lines

5.8.2 Mitigation Strategies

- Construction is to be undertaken in accordance with the Erosion and Sediment Control Plan, , which is in accordance to Condition B16(d) of SSD 9250948.
- All erosion and sediment control devices shall be properly maintained for the duration of the work.
 All structures are to be inspected after rain events and sediment to be removed
- Any temporary stockpiles should be stabilised using sediment fencing or similar.

Epping West Public School Alterations and Additions

- All fuels and other hazardous liquids shall be stored at designated construction compounds
- All chemicals used for construction shall be stored and used in accordance with the relevant Safety Data Sheets.
- An emergency spill kit shall be kept at the construction compound.
- Workers are to be made aware of the provisions of Section 120 of the POEO Act with regards to water pollution
- Notification to the EPA in accordance with Part 5.7 of the POEO Act is to be undertaken where a
 pollution incident occurs
- All construction vehicles and equipment are to be maintained in designated areas away from watercourses
- Construction vehicles shall be appropriately cleaned of any soil or mud prior to leaving each works site at dedicated wash down bays
- "Clean" stormwater shall be diverted around the site where possible
- All existing stormwater pits and drains subject to HY construction works will be silt protected with geo-fabric and/or granular socks. Drains will be monitored and maintained by HY
- Stockpiles to be established at HY approved locations
- Sediment fences shall be installed at required locations at the perimeter of the site
- Stormwater shall be diverted to retention basins
- The location and details of permanent controls shall be included on the Site Layout Plan
- Erosion and sediment controls shall be inspected as part of the Site HSE Inspection

5.9 Terrestrial Flora and Fauna

5.9.1 Likely Impacts

There are very minimal tree species found within the site premise of Epping West Public School. The mitigation strategies outlined in the subsequent section will be adopted during construction to minimise the impact that the construction has on the local flora and fauna.

5.9.2 Mitigation Strategies

- No vegetation removal or modification is to occur beyond the proposed works areas shown on the plans.
- Any identified noxious weeds should be removed as part of the works if encountered
- Carry out landscaping in accordance with the landscape design
- Any areas of significant flora and fauna value which have been identified on the construction site will remain bunted/ flagged during construction
- If any additional species are encountered the Site Manager shall arrange for works to be ceased in the area and contact the Superintendent for further directions.
- Access restricted by fencing to the outside of the SRZ or TPZ. No materials to be stored or plant access within the fenced restricted area.

Epping West Public School Alterations and Additions

5.10 Archaeology & Cultural Heritage

5.10.1 Likely Impacts

There is a possibility of encountering culturally significant indigenous artefacts as determined by the Aboriginal Archaeological Assessment that has been completed for the area. If the proposed works would disturb any undisturbed Aboriginal objects or sites of historical relics, the following mitigation strategies will be adopted. The following Mitigation Strategies are in accordance with Condition B12(b) of SSD 9250948.

5.10.2 Mitigation Strategies

- All workers (including contractors) should be made aware that it is illegal to harm an Aboriginal object or historic relics, and if a potential Aboriginal object or historic relic is encountered during activities, then all work at the site will cease and the OEH will be contacted to advise on the appropriate course of action to allow the Wallumedegal People to record and collect the identified item(s).
- All workers (including contractors) should be inducted concerning Aboriginal cultural heritage
- In the event that known or suspected Aboriginal skeletal remains are encountered during the activity, the following procedure will be followed:
 - a. All work in the immediate vicinity will cease;
 - b. The find will be immediately reported to the work supervisor who will immediately advise the environment manager or other nominated senior staff member;
 - c. The environment manager or other nominated senior staff member will promptly notify the police and the state coroner (as required for all human remains discoveries);
 - d. The environment manager or other nominated senior staff member will contact the OEH for advice on identification of the skeletal material as aboriginal and management of the material; and
 - e. If the skeletal material is of aboriginal ancestral remains, the local aboriginal land council will be contacted and consultative arrangements will be made to discuss ongoing care of the remains.
 - f. The project team will take all necessary measures to protect the artefacts from being damaged or destroyed.
 - g. Works will not re-commence in the area until a written instruction from the superintendent is received.

5.11 Site Contamination

5.11.1 Contaminated Soil Risk Assessment

A preliminary contamination investigation has been conducted by Environmental Investigation Services (EIS) which has concluded that there is a relatively low potential for contamination-related unexpected finds to occur at the site during the proposed development works (refer Appendix A.12 for Executive Summary). Prior to the commencement of bulk earthworks (under the Early Works DA) and in line with the risk assessment generated for the project, an assessment of actual or potential soil contamination and it's impacts was undertaken using the Soil Contamination Assessment on BIM360 Field. The

Epping West Public School Alterations and Additions

purpose of this assessment was to provoke whether HY should have an independent third party to provide recommendations or seek wider advice within the company so that the additional knowledge can reduce the risk profile of contaminated soil. The findings of this assessment concluded that there is no contaminated soil present on the site. There are no existing adjacent buildings to the site. Despite this, Section 4.11.7 of this management plan contains the unexpected finds protocol that is to be adopted in the event that unexpected contaminated material is encountered.

5.11.2 Identification of Contaminated Soil

During construction, it shall be necessary to monitor soil contamination levels (if any), dust levels and water runoff quality, to ensure that health and environmental standards are not compromised. This is especially important as contaminated soil may be excavated and transported around the site.

Upon discovery of contaminated soil, the HY Site Manager shall arrange for works to be ceased immediately in the area and contact the Superintendent for further directions.

Contaminated waste shall be collected, contained, stored, handled and disposed of in accordance with relevant legislation and codes of practice.

The EIS and Identification of Contaminated Soil is in accordance with Condition B15(c) of SSD 9250948.

5.11.3 Risk of Exposure

It is important to minimise the risk of exposure of construction personnel to soil contaminants by adopting appropriate site controls and industrial hygiene practices. Site controls may include:

- Defining certain areas as contaminated and restricting access to them;
- Appropriate signage;
- Training construction employees in industrial hygiene procedures;
- Keeping non-essential motor vehicles such as personal cars out of contaminated areas;
- Regular medical checks of construction personnel who are exposed to contaminated soils;
- Keeping stockpiles of contaminated material watered down to minimise dust generation in accordance with any water restriction requirements and ensure that runoff is not generated from excessive watering;
- Covering truck loads with tarpaulins and watering material when loading and unloading;
- Wheel washes for trucks and vehicle leaving the contaminated areas;
- Regular road sweeping and cleaning;
- Dust monitoring and adjustment of construction programs to accommodate high risk periods when conditions are windy or very dry; and
- Monitoring of concentrations of volatiles.

Industrial hygiene practices may include:

- Wearing long sleeved shirts and trousers or overalls to minimise dermal exposure;
- Wearing gloves when handling soils;
- Washing hands and faces before eating, drinking or smoking;
- Leaving overalls at site for laundering;

Epping West Public School Alterations and Additions

- Showering and washing facilities; and
- Wearing respiratory equipment during times of high dust or volatile emissions.

5.11.4 Groundwater Management

The contamination investigation conducted by EIS concluded that groundwater is not considered to pose a risk to the site (refer Appendix A.12 for the Executive summary). This was based on boreholes that were completed in the investigation that did not encounter any groundwater on the site, and the laboratory testing of groundwater samples obtained was below the Site Assessment Criteria. Despite this, the measures outlined in Section 4.11.5 will be adopted to mitigate the potential contamination of groundwater. Furthermore, the unexpected finds protocols outlined in Section 4.11.7 & Section 4.11.8 will be adopted in the event that groundwater is encountered on site.

5.11.5 Release of Contaminants to Soil and Groundwater

Water spraying of stockpiles and of soils being loaded and unloaded from trucks, covering of truck loads with tarpaulins and other measures described in the previous section would minimise the potential for dust to be generated.

If heavily contaminated soil is placed in contact with clean soils, contaminants could be mobilized by rainwater or chemical / physical reactions and affect the clean soils to a limited extent.

Similarly, there is a risk that contaminated soil is not clearly differentiated from clean soil and that mistakes could occur which cause the materials to be mixed or wrongly handled or disposed of.

This shall be overcome by implementing a material tracking system for all contaminated soils and ensuring that construction staff are trained how to use the system.

This shall involve documenting areas containing contaminated soil and putting signage near stockpiles that indicated the type of material present and its contamination status.

It shall also require supervision and documentation of all movements of contaminated materials around the site.

Avoiding contact between stormwater and contaminated soils is difficult to achieve if larger areas of a site are being exposed within a short period, because it does not allow for minimizing the amount of soil that is uncovered or placed in temporary stockpiles.

Therefore, it is necessary to manage stormwater in such a way that it does not mobilize contaminants and transfer them to clean areas.

This may be achieved by:

- Covering stockpiles of contaminated soil;
- Placing stockpiles of contaminated soil on bitumen or other sealed areas;
- Installation of adequate bunding or other approved method to contain runoff;
- Collecting stormwater run-off from stockpile areas; and
- Analytical testing of collected stormwater prior to its release.

Erosion and sediment control procedures in accordance with the relevant Code of Practice may also be applied, but with the additional objective of keeping water that is exposed to contaminated soils separate from water that has only come into contact with clean soils.

Epping West Public School Alterations and Additions

Groundwater could potentially be impacted by contaminants mobilized from stockpiled contaminated soil or by buried material.

Minimising runoff from stockpiles, as outlined above would reduce the risk to groundwater.

Land filling of contaminated material which is below the relevant criteria for soil contamination above the water table and capping the landfill area with low permeability material would minimise the risk of groundwater contamination from infiltration of stormwater into buried soils.

5.11.6 Heavy Metal Contamination

Any suspicious industrial wastes encountered will be immediately isolated to enable these assumptions to be confirmed by analytical testing.

5.11.7 Mitigation Strategies

In the event that unexpected conditions are encountered during development work or between sampling locations which may pose a contamination risk, all works should stop and an environmental consultant shall be engaged to inspect the site and address the issue.

5.11.8 Unexpected Finds

In accordance with Condition B12(b) SSD 9250948, unexpected finds protocols must be included within the CEMP to outline the process to be followed in the event that unexpected contamination and/or Aboriginal/non-Aboriginal heritage is found through the duration of the project. Unexpected Find shall be addressed in compliance with the Hansen Yuncken's Unexpected Finds protocol listed below:

Unexpected Finds Protocols - General including aboriginal and non-aboriginal items

- 1. Immediately cease work and contact site foreman
- 2. Site Foreman to construct temporary barricading to prevent worker access to the unexpected substance(s) and install appropriate stormwater/sediment controls
- 3. Site foreman to contact Client and arrange inspection by the Aboriginal Cultural Heritage consultant
- 4. Aboriginal Cultural Heritage consultant to undertake detailed inspection and sampling & analysis
- 5. If the findings assessed are presenting to be of Aboriginal Cultural Heritage significance, following steps should be in accordance with the Aboriginal Cultural Heritage consultants direction and works must cease until further notice.
- 6. If the findings assessed are not presenting to be of Aboriginal Cultural Heritage significance, Site foreman to remove safety barricades and controls and continue work
- 7. Aboriginal Cultural Heritage consultant to supervise remediation and undertake validation/clearance as per the remediation/validation/clearance plan
- 8. Site Foreman to remove barricades and controls and continue work.
- 9. Aboriginal Cultural Heritage consultant to submit assessment/validation/clearance to site foreman for distribution to Client and appropriate regulatory authorities.

HANSENYLINCKEN

Construction Environmental Management Plan (CEMP)

Epping West Public School Alterations and Additions

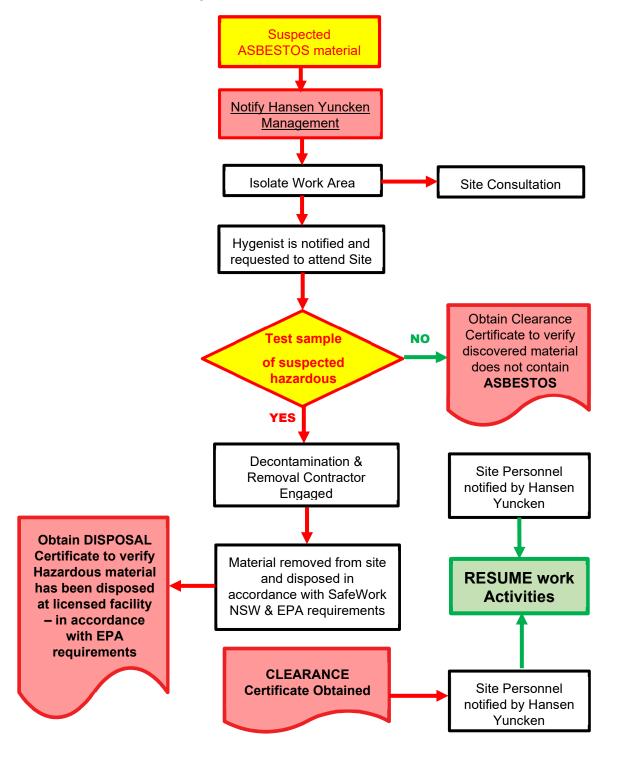

Unexpected Finds Protocol – Asbestos and contamination

If asbestos is detected in unexpected areas prior to, or during, site development works the following 'Unexpected Finds Protocol' will apply:

- a. Upon discovery of suspected asbestos containing material, the site manager is to be notified and the affected area closed off by the use of barrier tape and warning signs. Warning signs shall be specific to Asbestos Hazards and shall comply with the AS1319-1994 – Safety Signs for the Occupational Environment.
- b. An Occupational Hygienist is to be notified to inspect the area and confirm the presence of asbestos and to determine the extent of remediation works to be undertaken. A report detailing this information would be compiled by the Occupational Hygienist and provided to the Principal (or their representative) and the site manager.
- The location of the identified asbestos material would be surveyed using sub-meter Differential Global Positioning System (DGPS).
- d. If the impacted soil is to be disposed off site, it should be classified in accordance with the DECCW's Waste Classification Guidelines (2008) and disposed of, as a minimum, as asbestos contaminated waste to a suitably licensed landfill. In dry and windy conditions the stockpile would be lightly wetted and covered with plastic sheet whilst awaiting disposal.
- e. All work associated with asbestos in soil would be undertaken by a contractor holding a class ASA Licence. WorkCover must be notified 7 days in advance of any asbestos works.
- Monitoring for airborne asbestos fibres is to be carried out during the soil excavation in asbestos contaminated materials.
- g. Documentary evidence (weighbridge dockets) of correct disposal is to be provided to the Principal (or their representative).
- h. At the completion of the excavation, a clearance inspection is to be carried out and written certification is to be provided by an Occupational Hygienist that the area is safe to be accessed and worked. If required, the filling material remaining in the inspected area can be covered/sealed by an appropriate physical barrier layer of non-asbestos containing material prior to sign—off.
- i. Validation samples would be collected from the remedial excavation to confirm the complete removal of the asbestos containing materials. If the asbestos pipes/conduits are uncovered, then sampling density would typically comprise one sample per 10-20 linear meter (depending on the length of the pipe). If asbestos debris are found, then the sampling density would typically comprise 1 sample per 5 metre x 5 metre grid.
- j. The sampling locations should be surveyed using a sub-meter DGPS.
- k. Details are to be recorded in the site record system.
- Following clearance by an Occupational Hygienist, the area may be reopened for further excavation or construction work.

Unexpected Finds Protocol - ASBESTOS

Epping West Public School Alterations and Additions

Unexpected Finds Protocol - Buried Structures

In the unlikely event that buried structures such as Underground Storage Tanks (USTs) are encountered during site works, the structure(s) and any associated pipe-work should be managed /removed as follows:

- a. Upon discovery of structure, the site foreman is to be notified and the area barricaded;
- b. Visual identification of the tank and associated pipe-work;
- c. Remove and dispose of the structure and associated pipe-work by a qualified contractor. In the case of an UST, the tank must be removed in accordance with Australian Institute of Petroleum (AIP) Code of Practice and Australian standards;
- d. Excavate and stockpile impacted materials (based on field observations) for classification;
- e. Validation of the remedial pit by a qualified environmental consultant for the contaminants of concern at the following sampling density:
 - i) Base of tank pit excavation 1 sample per 25 m² (i.e. 5m x 5 m grid);
 - ii) Side of tank pit excavation 1 sample per 10 linear metre (minimum of 1 sample per side) and 1 sample per 2m 3m depth interval;
 - iii) Fuel feed lines/pipe-work 1 sample per 10 linear metre and 2 3 depth interval; and
- f. If required, "chase out' all of materials in the remediation pit identified to be impacted by petroleum/hydrocarbons and further validation sampling and analysis as required to assess appropriate removal of impacted materials;
- g. Waste classification and off-site disposal of impacted materials in accordance with Section 4.12 of this plan on Waste Management and
- h. Inclusion of validation, waste classification and disposal documents (including landfill dockets and, in the case of USTs, tank and pipe work destruction certificates) in the validation report.

5.12 Waste Management

In accordance with Condition B12(e) of SSD 9250948, the Construction Waste Management Plan (CWMP) has been completed for the project and is contained within (Appendix A.8). The CWMP contains detailed information regarding the types and disposal of different waste types throughout the project. In particular, section 5 of the Waste Management Plan addresses the way that waste will be addressed throughout the construction process with reference to the unexpected finds protocols that are to be adopted in the event that an unexpected find is encountered.

In accordance with Condition B15(a), the waste classification for the project is contained within Appendix A.9. Detailed information regarding the treatment and allocation of waste for the duration of the project is contained within the CWMP.

5.12.1 Waste Reduction

It is likely that some excess building materials will be produced due to the construction work such as miscellaneous waste associated with packaging and transport of plant and equipment and various other manufactured items forming part of the augmentation works. Waste generated as a result of construction will be minimised, recycled, reused or recovered, where practical.

HY has accepted the challenge to reduce waste on construction projects, particularly in materials transferred to landfill.

Epping West Public School Alterations and Additions

The strategy for reducing the waste on the project will be made up of three strategies as detailed below in order of priority. The prime objective is to keep the amount of materials transferred to landfill from this project to the minimum possible amount.

- Reduce the amount of waste material produced on the project by ensuring that only enough materials required to perform the works are ordered.
- 2. Any excess materials from particular work areas are to be retained and incorporated into other work areas where practical.
- 3. Encourage "just in time" delivery of construction materials (minimum storage on site) to reduce the potential of loss / waste due to damage prior to usage.

5.12.2 Waste Generation – Fill Material

All materials are site won and will be retained on site.

5.12.3 Non-Recyclable Waste

Non-recyclable waste will be disposed of at an EPA approved landfill or transfer station.

5.12.4 Waste Collection & Disposal

Appropriate waste bins are to be provided by HY and made available to all S/C

All S/C shall be directed to place waste in the bins provided. This shall be included in the Site Induction.

Waste collection points are nominated on the Site Layout Plan.

Waste Collection & Disposal is in accordance with Condition B15(b) of SSD 9250948.

5.12.5 Waste Reporting

Waste generation is monitored by HY on monthly basis to ensure that the company's waste reduction objectives are achieved. Waste disposal quantities are monitored monthly by HY to ensure compliance.

The Project Administrator shall record waste disposal data on BIM360 Field using the waste record checklist.

Waste quantities from the PMR shall be entered into the State HSE Database for analysis and reporting against HY Waste reduction targets.

5.12.6 Concrete Waste & Washout

Concrete trucks and pumps shall be washed out at designated locations as shown on the site layout plan. Washout of concrete pumps and AGI's in other areas will not be permitted.

Washout shall be captured using membranes or other suitable means and allowed to set.

Waste shall be placed in bins for disposal with site waste.

Excess concrete shall be returned to the concrete plant for disposal or re-use.

Epping West Public School Alterations and Additions

5.12.7 Mitigation Strategies

- Accurate written records are to be kept such as:
 - Who transported the waste (company name, ABN, vehicle registration and driver details, date and time of transport, description of waste)
 - Copies of waste dockets/receipts for the waste facility (date and time of delivery, name and address of the facility, it's ABN, contact person).
- The construction contractor to ensure that waste generated by the works is transported to a place that can lawfully accept it as per Section 143 of the *Protection of the Environment Operations Act* 1997.
- The removal of any asbestos containing material if found is only to undertaken by an appropriately licenced contractor as per WorkCover NSW requirements and current guidelines.
- All waste, including excess spoil be recycled where practicable
- Trucks transporting spoil off site to be covered.
- The EPA is to be notified immediately of any pollution incidents or harm to the environment (as defined under Part 5.7 of the POEO Act).

5.13 Visual

5.13.1 Likely Impacts

The project has minimal visual impact to neighbouring properties. The visual impact has been assessed through the SSDA within the Environmental Impact Statement (EIS).

5.13.2 Mitigation Strategies

 Construct landscaping in accordance with the design documentation will reduce visual impacts of the new development.

5.14 Environmental Complaints

Complaints received regarding HY's Environmental Impacts or performance shall be recorded as Complaint in accordance with Hansen Yuncken's <u>HSE Incident Procedure</u>. Actions to be taken to address the complaint.

5.15 Fuel & Chemical Spills

Response to major fuel spills shall be implemented in accordance with the fuel spill procedure in the Emergency Response Plan. The requirements for storage of large fuel and chemical quantities are not expected for this project.

A spill kit shall be located adjacent to fuel and chemical storage and dispensing areas.

5.16 Hazardous Materials

Hazardous materials shall be controlled in accordance with Hazardous Materials procedure.

5.17 External Lighting

In accordance with condition B12(a)iv) of SSD 9250948, the external lighting to the proposed alterations and additions for the Epping West Public School complies with AS4282-2019 – Control of the Obstructive

Epping West Public School Alterations and Additions

Effects of Outdoor Lighting. Please refer to Appendix A.11 for the certificate verifying the compliance with these Australian Standards..

5.18 Community Consultation and Complaints Handling

In accordance with condition B12(a)v) of SSD 9250948, community consultation and complaints handling is primarily the responsibility of the Client. Hansen Yuncken will provide assistance where possible to ensure that the client is complying with the requirements of Community Communication Strategy, developed for the Epping West Public School.

5.18.1 Community Consultation

Community consultation is primarily the responsibility of the client. Hansen Yuncken will ensure that the relevant strategies/outcomes are incorporated within the relevant management plans and construction process where possible. The main channels that the client is planning on conducting consultation is through the following:

- Community information phone line
- Community contact cards
- Door knocks
- Face-to-face meetings/briefings
- Fact sheets
- Information Booths
- Project updates
- Project Reference Group
- Website
- Works notifications
- Letterbox drops

The above have been extracted from Table 3 of the Community Communication Strategy.

5.18.2 Complaints Handling

The primary form of assistance that Hansen Yuncken will provide is through the complaints handling process. During the project delivery phase, a complaint defined as in regards to construction impacts – such as – safety, dust, noise, traffic, congestion, loss of parking, contamination, loss of amenity, hours of work, property damage, property access, service disruption, conduct or behaviour of construction workers or other environmental impacts. If a complaint is made directly to Hansen Yuncken, it will be redirected to the following SINSW communication channels through the provision of business cards containing the following information:

Phone: 1300 482 651

Email: <u>schoolinfrastructure@det.nsw.edu.au</u>

Upon receipt of the complaint from the Project Director, Hansen Yuncken will endeavour to close out the complaint in a timely manner. The complaint will be logged to ensure that the impact of future construction works that may impact the community in a similar manner are minimised.

6 Measurement & Evaluation

6.1 Environmental Incidents & Emergencies

6.1.1 Environmental Incidents

Incidents resulting in potential or actual environmental damage shall be reported and investigated in accordance with the Hansen Yuncken's <u>HSE Incident Procedure</u> and recorded on BIM360 using the HSE incident report

6.1.2 Environmental Emergencies

Preparation for and response to the environmental impacts of emergency events shall be conducted in accordance with Hansen Yuncken's project <u>Emergency Response Plan</u>. The environmental impacts controlled in ERP are:

Water Pollution

An incident involving actual or potential harm to human or environmental health must be reported immediately to the EPA.

Firstly, call 000 if the incident presents an immediate threat to human health or property. Fire and Rescue NSW, the NSW Police and the NSW Ambulance Service are the first responders, as they are responsible for controlling and containing incidents.

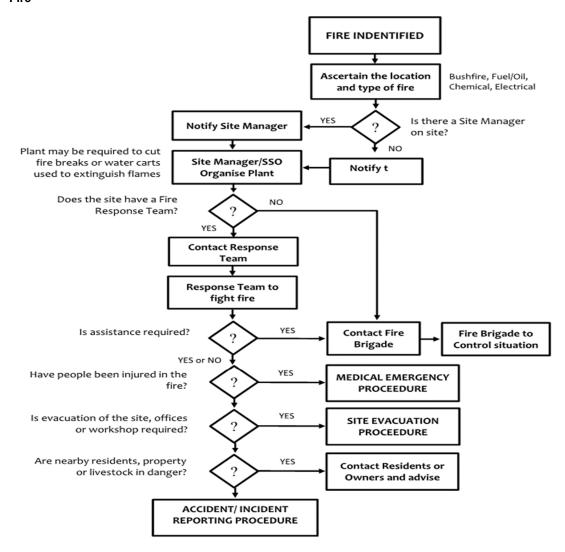

If the incident does not require an initial combat agency, or once the 000 call has been made, notify the HY Site Manager who will notify the relevant authorities in the following order. The 24-hour hotline for each authority is given when available:

EPA Environment Line on 131 555

Safework NSW Authority - phone 13 10 50 (Where appropriate)

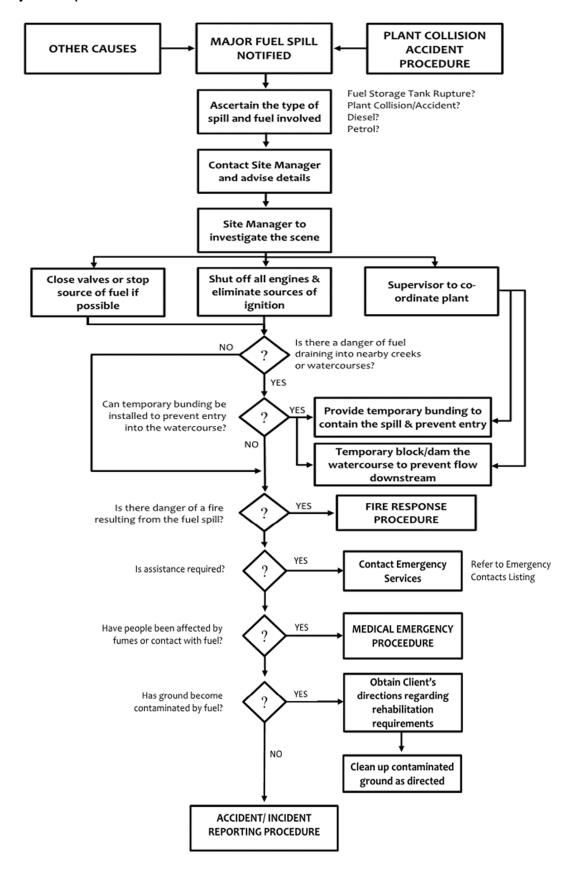

Fire

Epping West Public School Alterations and Additions

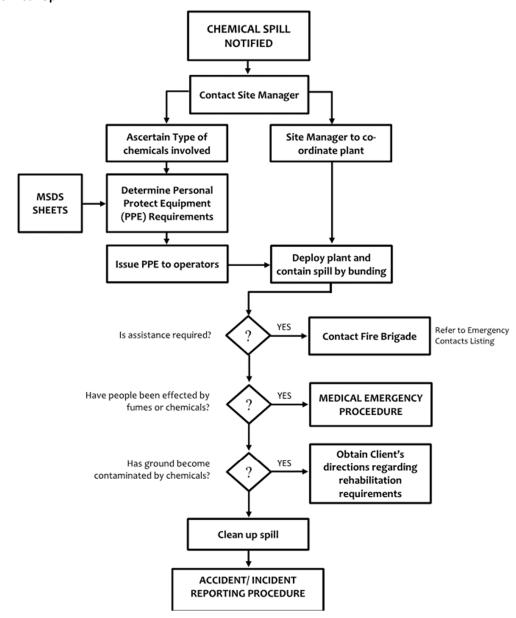

Major Fuel Spill

Epping West Public School Alterations and Additions

Chemical Spill

6.2 **Environmental Inspections & Audits**

Inspections & audits of the site including environmental controls shall be conducted in accordance with the procedure for Site HSE Inspections & the project Audit Management Plan. The following inspections will be conducted onsite throughout the time on the project:

- Fortnightly site inspections,
- Monthly task observations,
- 3 monthly internal audits,
- Monthly external audits in line with the contract requirements &,
- Bi-Monthly external audits in line with the contract requirements.

Refer to appendix A15 for the HY HSE Audit.

Epping West Public School Alterations and Additions

6.2.1 Non-Conformances

Where an item has been assessed as Non-Conformance (NC) during any internal inspection an issue shall be raised in BIM360 Field to bring the activity or process into compliance with requirements. The issue(s) shall be recorded in BIM360 Field and allocated to the relevant contractor/subcontractor.

The independent consultant in writing shall raise all items assessed as non-conformance during external audits and HY will address all issues and close out within the time frame advised.

HY shall ensure that product/ works which does not conform to specified requirements are identified and controlled to prevent its unintended use or delivery. A nonconformance shall be raised to Johnstaff and SINSW when:

- Works/products not meeting specified requirements are identified; and/or
- Works have not been inspected or tested in accordance with specified requirements (frequency, method, authority); and/or
- A systematic and/or repeated omission/error that may result in a time or cost implication to the project.

Note that the client is responsible for all notifications to DPIE.

6.2.2 Reporting & Corrective Actions

All nonconformities will result in corrective action being undertaken. The significance of nonconformities shall be evaluated in terms of their impact on:

- operating costs,
- cost of nonconformity and its correction,
- product performance,
- regulatory requirements,
- client satisfaction, and
- any other risks

HY project management shall undertake the following actions to investigate the causes of nonconformities specific to the project in order to prevent recurrence.

- identify nonconformities that relate to: products; QMS processes; resources; subcontractors and outsourced work; client complaints;
- review and determine the causes of nonconformities using problem solving tools such as the root cause analysis process - Process Workflow flowchart - to determine the underlying root cause(s) of the nonconformity;
- evaluate the need for corrective action to minimise the occurrence of identified nonconformities;
- determine and implement the corrective action needed; and
- monitor the corrective actions taken and record the results to determine if further improvement is necessary to get it right.
- Actions taken to eliminate the cause of nonconformity must flow from the root cause analysis and may involve changes to product, process, resources, methods, equipment, etc. or any combination of these.

Epping West Public School Alterations and Additions

Records of the actions taken and follow-up activities shall be monitored and maintained by the project Ensure timely completion of any open corrective action. Monitor corrective action records on an ongoing basis, for any recurrence of the nonconformity where corrective action was taken.

HY will provide appropriate notification to Johnstaff and SINSW as described below;

- Site conditions
 - If the Contractor becomes aware of Adverse Site Conditions, the Contractor must notify the Principal in writing as soon as possible and in any event within 7 days after becoming aware of the Adverse Site Conditions. Where practicable, the notification should be given before the Adverse Site Conditions are disturbed. The notification must include details of:
 - 1. The Site Conditions the Contractor claims are Adverse Site Conditions;
 - 2. The reasons why the Contractor claims that the Site Conditions are Adverse Site Conditions (having regard to the warranty in clause 36.2), including any information supporting this contention;
 - 3. The effect on the Works;
 - 4. The effect on achieving Completion;
 - 5. The additional work and resources involved and the Contractor's estimate of its entitlement to any adjustment to the Contract Price; and
 - 6. Any other matters the Contractor considers relevant.
- Notify the Principal immediately upon discovering any damaged services or services that obstruct the Works and are not shown in the Principal's Documents.
- WHS -
 - The Contractor is to notify the Principal and Project Manager of an incident that has occurred onsite by submitting a high level written correspondence within the same day of occurance and follow up with a detailed final report withion 48 hours of occurance of any incident
 - Notify the Principal of any notifiable incident and any incident requiring medical treatment or involving lost time as soon as reasonably practicable after the incident. Provide a written report to the Principal within twenty-four hours after an incident, giving details of the incident and evidence that requirements of the WHS Act have been met.
 - Immediately notify the Principal of any Prohibition, Improvement, Non-disturbance or Penalty Notice issued by SafeWork NSW for any work under the Contract.
- Hazardous substances discovered unexpectedly on the Site
 - If any Nominated Hazardous Substance is discovered unexpectedly on the Site, the Contractor must suspend all work that may result in exposure to the substance and notify the Principal immediately of the type of substance and its location.
- Not less than 7 days prior to starting any asbestos removal work, notify the local office of SafeWork
 NSW and the Principal of the intention to carry out that work
- Environmental Management -

Epping West Public School Alterations and Additions

 Immediately notify the Principal of any pollution incident that may cause material harm to the environment, providing evidence that notification requirements of the POEO Act have been met, where applicable

The client is responsible for all appropriate notifications to DPIE.

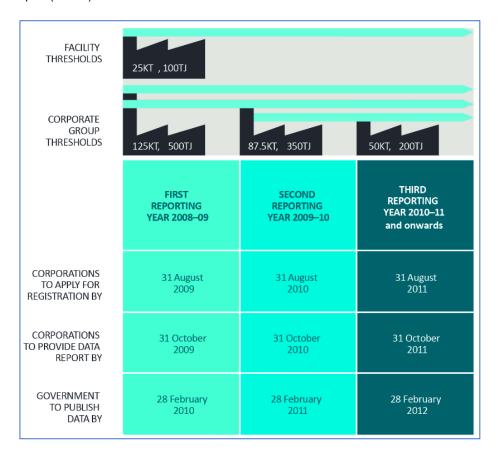

6.3 National Greenhouse & Energy Reporting (NGER)

6.3.1 National Reporting Guidelines

The purpose of the National Greenhouse and Energy Reporting Guidelines is to help corporations understand their obligations under the National Greenhouse and Energy Reporting Act 2007 (the Act).

6.3.2 Reporting Thresholds

HY's has been assessed and determined to be below the corporate group reporting thresholds – detailed in the below table. Notwithstanding this, all natural gas and electricity consumption is recorded monthly on BIM360 Field and collated for national reporting. Furthermore, all site mobile plant and equipment fuel consumption is registered on BIM360 Field and incorporated in the HY greenhouse gases (CO2-e) annual report (NGER).

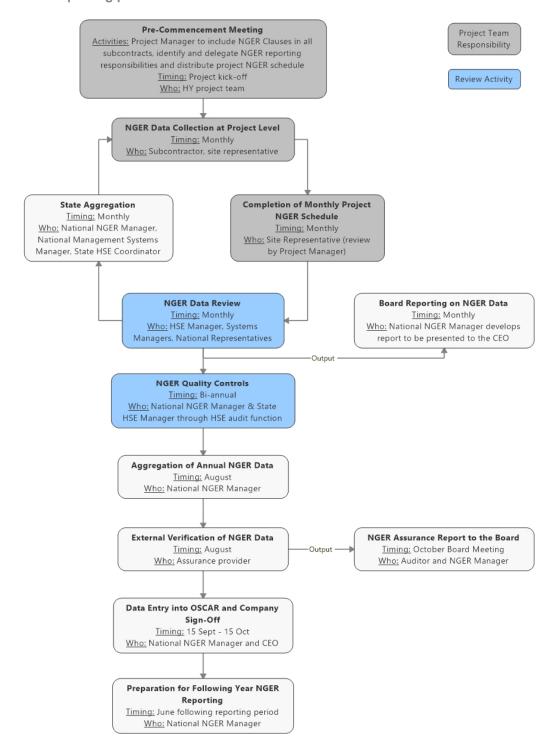

HANSENYUNCKEN

Epping West Public School Alterations and Additions

6.3.3 NGER Reporting process

6.3.4 NGER Data Collection

NGER data shall be collected and recorded on BIM360 Field using the Site Electricity and Natural Gas Usage Checklist

A.1 Hansen Yuncken Environmental Policy Statement

HANSENYUNCKEN

ENVIRONMENT POLICY

Hansen Yuncken Pty Ltd is committed to providing a high quality environment in the building and construction industry, which meets the requirements and expectations of Clients, Statutory Authorities, Employees and Community Groups.

Hansen Yuncken recognises that impacts on the environment in the building and construction industry relate not only to the process of construction but also to the design and subsequent use of the buildings constructed. Hansen Yuncken affirms its commitment to applying sustainable development principles to all facets of the building and construction process and to continually improve our performance in minimising the impact on, and pollution of, the environment during the construction process.

In achieving this Hansen Yuncken is committed to the implementation, maintenance and improvement of a Management System meeting the requirements of Australian and International Standard AS/NZS ISO 14001.

The National Executive Committee shall review Environmental objectives and set performance targets each year. State Managers, through their line management structure, are accountable for ensuring all employees and subcontractors achieve these objectives and targets.

The Company's Environmental performance shall be monitored against established performance targets and the results reported to the Board of Directors on the regular basis.

Hansen Yuncken affirm that they have a legal obligation to comply with relevant Environmental legislation, standards and codes of practice as the minimum level of performance and a professional obligation to acknowledge the views of Environmental and Community Groups.

Hansen Yuncken acknowledges that environmental excellence can only be achieved and maintained by a clear unequivocal direction of all levels of management, stimulating a participative atmosphere and sense of pride in our environmental achievements by all employees and trade contractors, and through recognition by concerned groups in obtaining this.

Peter Salveson Chief Executive Officer May 2018

Pedestrians/ workers walking around site being struck by vehicles/trucks/ plant moving around site	D	1	Medium	SafeWork NSW Code of Practice: Managing the risks of plant in the workplace SafeWork NSW Code of Practice - Moving Plant on Construction Sites	Bunted/lenced off pedestrian pathways have been erected on site to keep pedestrians clear of areas wh there are high movements of vehicles' trucks and plant. All subcontractors using moving plant must have HRCW SWMS which details how to protect other workers in the area from being struck by the plant. All must have a flashing light, horn and reversing beeper. Vehicles/ trucks must turn their flashing lights nor hare is a 16 km/m speed limit on site. All workers have been told at the site induction to be aware from plant on site and keep clear whenever possible. Only workers who are involved with the task are to be in civility of the plant. HY have instructed all subcontractors to train their workers through pre-star mein how to approach moving plant and equipment. Haul roads for plant and vehicles are to be maintained. Pedestrians are to avoid valking on haul road whenever possible. Plant operators are to keep reversing i minimum. Pedestrians that need to approach moving plant are to do so from the front of the machine and to gain the operators attention by waving arms and yelling out to the operator. No person is to approach moving with machines must always stand in an area where they are visible to the operator. A site spotted clinication plan has been proposed to and approved by the site safety committee. This plan states areas where a spotter is mandatory for all plant and vehicle movements. This plan is posted on the site notice board.

1 Introduction

1.1 Project Summary

ptc. has been engaged by Hansen Yuncken to prepare a Construction Pedestrian & Traffic Management Plan (CPTMP) associated with the proposed redevelopment and construction of Epping West Public School, located at 96-104 Carlingford Road, Epping NSW 2121.

Ongoing consultation with TfNSW and City of Parramatta Council has been undertaken as part of regular Traffic Working Group meetings (commenced earlier in 2021) & direct submission of draft issue on 07 September 2021, addressing draft SSDA condition B13(b) (refer to Section 1.3).

The location of the site is shown in Figure 1.

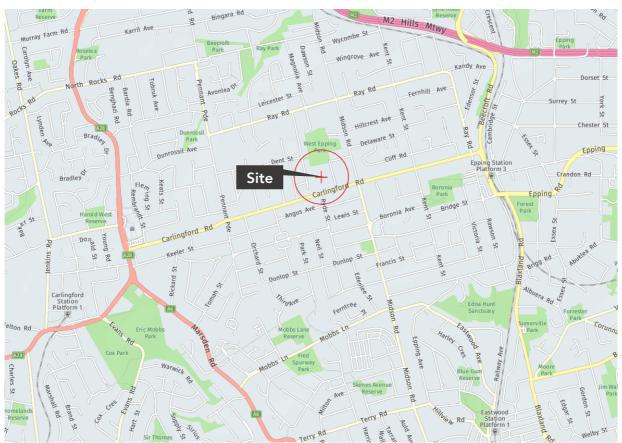

Figure 1: Site Location (Source: HereWego Maps)

1.2 Secretary's Environmental Assessment Requirements (SEARs)

As per Section 6. Transport and Accessibility of the Secretary's Environmental Assessment Requirements (SEARs) dated 8 October 2020, a Construction Traffic and Pedestrian Management Plan is to be prepared in accordance with the guidance provided in the TfNSW and Council advice attached to the SEARS, as follows:

TfNSW:

It is required that the applicant be conditioned to prepare a Construction Pedestrian and Traffic Management Plan (CPTMP). Prior to the issue of any construction certificate or any preparatory, demolition or excavation works, whichever is the earlier, the applicant shall prepare a Construction Pedestrian and Traffic Management Plan (CPTMP) in consultation TfNSW.

The CPTMP shall include (but not limited) the following:

- A description of the development;
- Location of any proposed work zone(s)
- Details of crane arrangements including location of any crane(s);
- Haulage routes;
- Construction vehicle access arrangements;
- Proposed construction hours;
- Predicted number of construction vehicle movements and detail of vehicle types, noting that vehicles movements are to be minimised during peak periods;
- Construction program and construction methodology;
- Any potential impacts to general traffic, cyclists, pedestrians and light rail and bus services within the vicinity of the site from construction vehicles during the construction of the proposed works;
- Cumulative construction impacts of projects and
- Proposed mitigation measures. Should any impact be identified, the duration of the impacts and measures proposed to mitigate any associated general traffic, public transport, pedestrian and cyclist impacts should be clearly identified and included in the CPTMP.
- Submit a copy of the final plan to TfNSW for endorsement; and
- Provide the builder's direct contact number to small businesses adjoining or impacted by the
 construction work and the Transport Management Centre within TfNSW to resolve issues relating to
 traffic, public transport, freight, servicing and pedestrian access during construction in real time.
 The applicant is responsible for ensuring the builder's direct contact number is current during any
 stage of construction.

Please send information to <u>development.sco@transport.nsw.gov.au</u>

1.3 Compliance with Conditions of Consent

A summary of the relevant requirements of the SSDA Conditions of Consent dated 10 September 2021 are provided below for clarity.

Condition B12

Prior to the commencement of construction, the Applicant must submit a Construction Environmental Management Plan (CEMP) to the Certifier and provide a copy to the Planning Secretary for information. The CEMP must include, but not be limited to, the following:

(c) Construction Traffic and Pedestrian Management Sub-Plan (see condition B13);

Refer to this report.

Condition B13

The Construction Traffic and Pedestrian Management Sub-Plan (CTPMSP) must be prepared to achieve the objective of ensuring safety and efficiency of the road network and address, but not be limited to, the following:

(a) Be prepared by a suitably qualified and experienced person(s);

Refer to page 2

(b) Be prepared in consultation with Council and TfNSW;

Refer to Section 1.1 & Appendix B

(c) Detail the measures that are to be implemented to ensure road safety and network efficiency during construction in consideration of potential impacts on general traffic, cyclists and pedestrians and bus services; and

Refer to Section 4.13, Section 4.19, Section 4.23 & Appendix E

(d) Detail heavy vehicle routes, access and parking arrangements.

Refer to Section 4.8, Section 4.10 & Appendix E

Condition B17

A Driver Code of Conduct must be prepared and communicated by the Applicant to heavy vehicle drivers and must address the following:

(a) Minimise the impacts of earthworks and construction on the local and regional road network;

Refer to Section 4.23 & Appendix C

(b) Minimise conflicts with other road users;

Refer to Appendix E

(c) Minimise road traffic noise; and

Refer to Section 4.4, Section 4.23 & Appendix C

(d) Ensure truck drivers use specified routes.

Refer to Section 4.8, Section 4.19, Section 4.23 & Appendix C

Condition B18

Prior to the commencement of construction, the Applicant must submit a Construction Worker
Transportation Strategy to the Certifier. The Strategy must detail the provision of sufficient parking facilities
or other travel arrangements for construction works in order to minimise demand for parking in nearby
public and residential streets or public parking facilities. A copy of the strategy must be provided to the
Planning Secretary for information.

Refer to Appendix D

Condition B20

Prior to the commencement of demolition and/or removal of buildings and construction, evidence of compliance of construction parking and access arrangements with the following requirements must be submitted to the Certifier:

(a) All vehicles must enter and leave the Site in a forward direction;

Refer to 4.23 & Appendix A (Drawing 01T-0104)

(b) The swept path of the longest construction vehicle entering and exiting the site in association with the new work, as well as manoeuvrability through the site, is in accordance with the latest version of AS 2890.2; and

Refer to Appendix A (Drawings 01T-0104 and 01T-0113)

(c) The safety of vehicles and pedestrians accessing adjoining properties, where shared vehicle and pedestrian access occurs, has been addressed.

Refer to Section 4.20, Appendix A & Appendix E

2 Background Information

2.1 Site Context

The site currently lies within a Low Density Residential (R2) zone, as shown in Figure 2.

Key features surrounding the site include:

- Public Recreation (RE1) to the North;
- Classified Road Infrastructure (SP2) to the South; and
- Low Density Residential (R2) to the East and West.

The proposal relates to the following site:

- Lot 1, DP122509; and
- Lot 11, DP1099882.

Figure 2: Local land use map (Source: NSW Planning Portal)

3 Existing Transport Facilities

3.1 Road Hierarchy

The NSW administrative road hierarchy comprises the following road classifications, that align with the generic road hierarchy as follows:

State Roads Freeways and Primary Arterials (TfNSW Managed)

Regional Roads Secondary or sub arterials (Council Managed, partly funded by the State)

Local Roads Collector and local access roads (Council Managed)

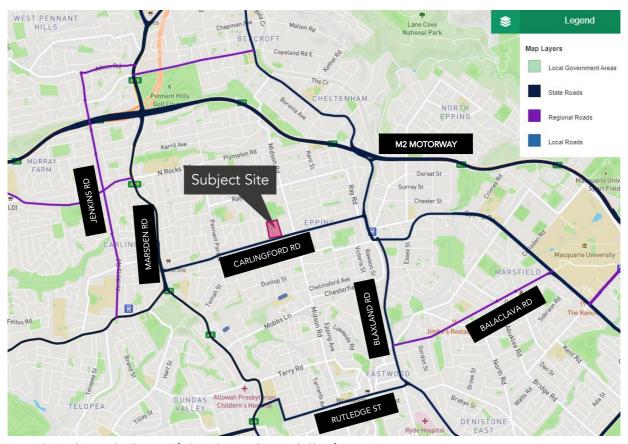

Figure 3: Road Hierarchy (Source: TfNSW NSW Road Network Classifications)

3.1.1 Existing Road Network

Table 1: Existing Road Network - Carlingford Road

Carlingford Road

Road Classification State Road
Alignment East – West

Number of Lanes 1 lane eastbound, 1 lane westbound

Undivided
700 Netros

Parking Controls Signed, restricted Parking on School Days eastbound

Forms Site Frontage No

Figure 6: Lilli Pilli Street Eastbound (Source: Google Maps)

3.2 Key Intersections

The key intersections in the vicinity of the development site and their characteristics are listed below:

Pennant Hills Road / Carlingford Road: traffic signal controlled, 3-leg intersection

• Beecroft Road / Carlingford Road:

traffic signal controlled, 3-leg intersection

• Carlingford Road / Midson Road:

traffic signal controlled, 4-leg intersection

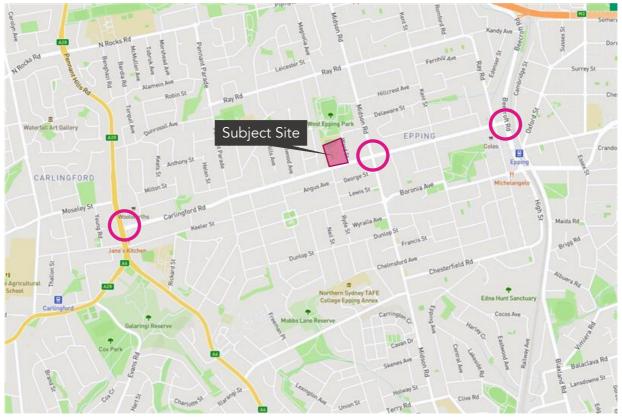

Figure 7: Key Intersections (Source: TfNSW NSW Road Network Classifications)

3.3 Public Transport

The locality has been assessed in the context of available forms of public transport that may be utilised by prospective staff and visitors. When defining accessibility, the NSW Guidelines to Walking & Cycling (2004) suggest that 400m-800m is a comfortable walking distance.

The area of comfortable walking distance is shown in Figure 8.

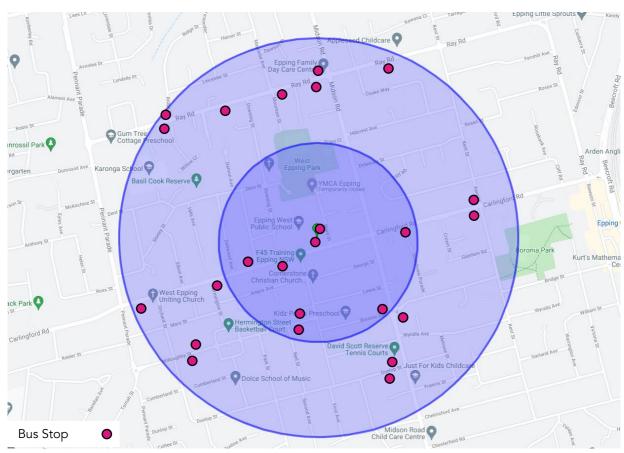

Figure 8: Public Transport Accessibility (Source: Nearmap)

3.3.1 Bus Services

The subject site is well serviced with multiple bus stops within a comfortable walking distance. A summary of the available bus routes that service the site is shown in Table 4.

Table 4: Bus Route Summary

Bus Route	Coverage (to and from)	Service Frequency
630	Blacktown – Epping	Weekdays: AM/PM peak – every 30 minutes Off Peak – every 1hr Saturday: No service available Sunday and public holidays: No service available
550	Macquarie Park to Parramatta via Epping	Weekdays: AM/PM peak – every 10 minutes Off Peak – every 20 minutes Saturday: Every 20 minutes Sunday and public holidays: Every 20 minutes

Bus Route	Coverage (to and from)	Service Frequency
546	Parramatta to Epping via Oatlands & North Rocks	Weekdays: AM/PM peak – every 30 minutes Off Peak – every 1 hour Saturday: Every 1 hour Sunday and public holidays: Every 1 hour
549	Parramatta to Epping via North Rocks	Weekdays: AM/PM peak – every 15 minutes Off Peak – every 1 hour Saturday: Every 1 hour Sunday and public holidays: Every 1 hour
541	Eastwood to Epping	Weekdays: AM/PM peak – every 30 minutes Off Peak – every 1 hour Saturday: No service available Sunday and public holidays: No service available

3.3.2 Active Transport

The bus routes in the vicinity of the subject site are predominantly serviced by the Carlingford Road which is within the 400m-800m walking catchment as defined by the NSW Guidelines to Walking & Cycling (2004). It is anticipated that this will encourage mode shift towards active transport. The catchments are well serviced with amenities for pedestrians such as footpaths and street lighting.

It is noted that partial low and moderate difficulty on-road cycling infrastructure are currently available within the vicinity of the site as shown in Figure 9. However, given the type of development proposed, it is anticipated that users of the development will predominantly travel to/from the Site via private vehicles.

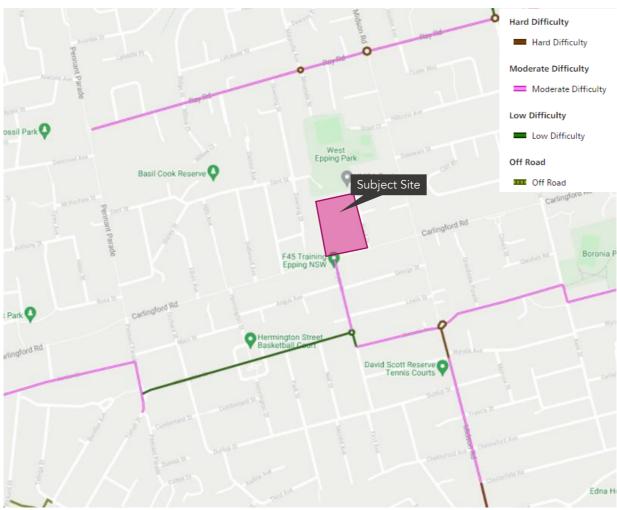

Figure 9: Cycling Infrastructure (Source: RMS Cycleway Finder)

4 Traffic Management Plan

4.1 Traffic Management Planning Process

Temporary Traffic Management (TTM) for the project has been planned in accordance with Transport for NSW, *Traffic control at work sites – Technical Manual, Issue No.6.0,* 14 September 2020 (TCAWS). The process is shown in Figure 10.

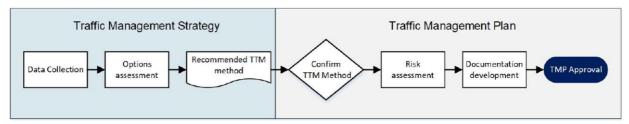

Figure 10: Traffic Management Plan process

An iterative process is being adopted in collaboration with relevant stakeholders to adopt the most appropriate traffic management approach and develop the associated documents for the work.

4.2 Traffic Management Strategy

A traffic management strategy has been chosen to support the appropriate allocation of time, funds and resources for the project, and allow for consultation in determining the safest and most efficient way for road users to interact with the work site. The following have been considered in determining the TTM method:

Detour options

No detours are necessary or proposed by the client and therefore, disproportionate amount of disruption to the road users will NOT be introduced.

Site location

The site of the works contains vegetation, existing signage and infrastructure that may obstruct signs and devices needed for certain strategies.

Work area

The area needed to safely perform the work does justify the full closure of sections of road.

Vulnerable road users

Desire lines of pedestrians, cyclists, motorcyclists and users of scooters do not impact on works or create undesired interaction between these road users and traffic

Community facilities and needs

The presence of YMCA Epping and Carlingford Road bus stops in the vicinity of the site does not create conflict with the work.

4.3 Decision of TTM Method

After considering the factors in Section 4.2, the TTM method chosen is "Around (elimination)" as traffic can and will be completely separated from the work area. This method will provide the lowest overall net risk option.

4.4 Hours of Work

All works associated with the project will be restricted to typical working hours (or stipulated by the conditions of the SSD Consent):

Monday to Friday 7:00am to 6:00pm;

Saturday 8:00am to 1:00pm; and

Sunday and Public Holidays
 No works to be undertaken without prior approval.

Construction works are not anticipated outside of oversized vehicles for module delivery and residents will be notified of potential disruptions.

No construction or road occupancies will impede the operation of the school drop off and pick up zone (kiss and drop is to remain functional at all times throughout development and traffic control is to be in place in accordance to the TGS in Appendix E).

4.5 General Requirements

In accordance with TfNSW requirements, all vehicles transporting loose materials will have the entire load covered and/or secured to prevent any items, excess dust or dirt particles depositing onto the roadway during travel to and from the site. All subcontractors shall undergo induction by the lead contractor to ensure all procedures are met for all vehicles entering and exiting the construction site. The lead contractors will monitor the roads leading to and from the site and undertake all necessary steps to rectify any road deposits caused by the construction activity.

Vehicles operating to, from and within the site shall do so in a manner that does not create unreasonable or unnecessary noise or vibration. No tracked vehicles are required nor permitted on any paved roads. Public roads and access points will not be obstructed by any materials, vehicles, refuse skips or the like, under any circumstances.

The applicant/contractor is required to follow and abide the specific standard requirements for construction management.

4.6 Construction Program

The construction is anticipated to commence in September 2021 and be completed in December 2022.

4.7 Construction Vehicle Volumes

The largest construction vehicle accessing the Site and the Works Zone will be a 20 metre Articulated Vehicle. Refer to Drawing # 01T-0103 & 01T-0104 in Appendix A for swept paths of each type of vehicle accessing the site. Table 5 below outlines the anticipated vehicle volumes per day for each stage of works.

Table 5: Construction Vehicle Demand

Stage	Vehicle Type	Vehicle Volume
Early works (i.e. demolition)	HRV	5 trips per day
Earthworks	MRV – HRV	20 trips per day
Concrete Pouring	MRV	10 trips per day
Reinforcement deliveries	Truck & dog / AV	1 trip per week
Other deliveries / telehandlers	Tipper truck & telehandler	1 trip per day

Construction vehicles are to avoid travelling to and from the site during the morning and afternoon pick up and drop off times, where possible. If access is required during these times, traffic controllers will manage any potential conflicts between vehicular and pedestrian movements (see TGS in Appendix E).

4.8 Construction Vehicle Routes

Figure 11: Construction Vehicle Ingress & Egress Routes

- Ingress route: accommodates vehicles up to/equivalent to a 20-metre Articulated Vehicle accessing a Works Zone along the western side of Ward Street
- Egress route: accommodates vehicles up to/equivalent to a 20-metre Articulated Vehicle egressing the Works Zone along the western side of Ward Street.

4.9 Construction Staging

The school re-development is to be constructed in 3 stages. Stage 1 consist of construction of Building S, Stage 2 is the construction of Building T, and Stage 3 is the refurbishment of Building A. Stages 2 and 3 will be undertaken concurrently, with Stage 3 finishing before Stage 2 being completed. Refer to the Construction Staging Plan prepared by Hansen Yuncken for further details. The swept paths for the different stages of construction are included in this report as Appendix A.

4.10 Access and Egress from Site

A swept path assessment has been undertaken using a 20m articulated vehicle as the largest anticipated vehicle accessing the Site. The assessment indicates that turning manoeuvres from Carlingford Road onto Ward Street will require the use of multi-lanes, which is permissible as per the *Road Rules 2014 – NSW*

Legislation Regulation 28. Therefore, the assessment indicates that the existing public roadways are able to accommodate the turning manoeuvres of the construction vehicles.

Access to and from the site is to occur outside of the school drop off and pick up times, where possible. If access is required during these times, traffic controllers will manage any potential conflicts between vehicular and pedestrian movements (see TGS in Appendix E).

Access to and from the site will be managed so that no vehicles queuing will not occur on Ward St or Carlingford Road. Appropriate amount of traffic controllers will be required if sight distance is restricted around the site.

4.10.1 Road Rules 2014 - NSW Legislation Regulation 28

The following has been extracted from the road rules which allows for the use of multi-lanes to perform a left turn manoeuvre for the proposed heavy vehicles.

A driver may approach and enter the intersection from the marked lane next to the left lane as well, or instead of, the left lane if:

- (a) the driver's vehicle, together with any load or projection, is 7.5 metres long, or longer, and
- (b) the vehicle displays a do not overtake turning vehicle sign, and
- (c) any part of the vehicle is within 50 metres of the nearest point of the intersection, and
- (d) it is not practicable for the driver to turn left from within the left lane, and
- (e) the driver can safely occupy the next marked lane and can safely turn left at the intersection by occupying the next marked lane, or both lanes.

The construction vehicles that require the use of multi-lanes all exceed 7.5m in length and also meets all other requirements stipulated in the regulation. Therefore, the swept path assessment has been undertaken utilising multi-lanes to perform turning manoeuvres when necessary.

4.10.2Restricted Access Vehicle (RAV) Routes

The construction vehicles will access/egress the site via Pennant Hills Road or Beecroft Road and Carlingford Road. It is noted that these roads are approved routes with restrictions for heavy vehicle access by vehicles up to 25/26m B-Doubles, as shown in Figure 12.

However, roads with restrictions which will need to be adhered to and approved by the National Heavy Vehicle Regulator (NHVR). The Principal Controller is to ensure that all construction vehicles travelling to/from the site are to seek approval from NHVR prior to commencement of works.

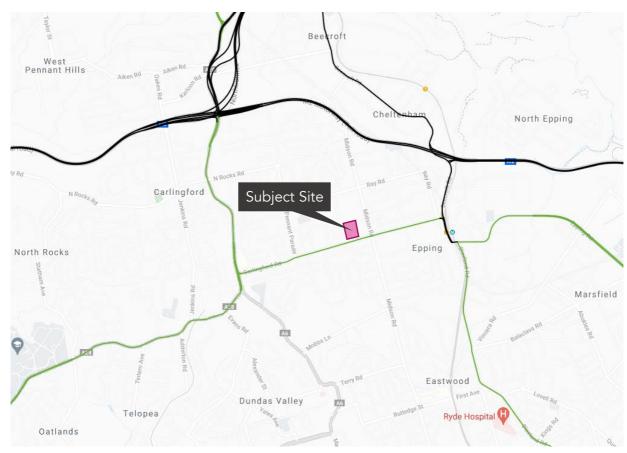

Figure 12: Restricted Access Vehicle Interactive Map (Source: TfNSW Roads & Waterways)

4.11 Crane Arrangements

Modules for modular building elements are proposed to enter Ward Street overnight under the NHVR permit requirements and scheduled to be undertaken during April 2022 school holidays. Residents will be notified of potential disruptions prior to works undertaken.

It is noted that Council will be constructing a new raised pedestrian crossing on Ward Street at approximately 50-80m distance from Carlingford Road, scheduled to be delivered before the end of June 2022. It is anticipated that these works will not take place during the same time period of module delivery to limit conflict of works and disruption to local residents.

Clear access for residents, emergency vehicles and exiting trucks are to be maintained at all times.

Figure 13: Indicative diagram of Stage 1 Modules on Ward Street (Source: Modscape; Detailed Design Buildability Workshop)

Drawing no. 01T-0115 in Appendix A illustrates the swept path assessment of private vehicle manoeuvres (ingress & egress movements) of the impacted driveways on the eastern side of Ward Street during the modules delivery & works.

Refer to Modscape documentation for further information on modular elements involving crane & truck deliveries, and TGS prepared for traffic management.

4.12 Works Zone / Road Occupancy

The development proposes a temporary road closure of Ward Street & Lilli Pilli Street, only maintaining resident access at these times. Temporary loss of on-street parking at the bend of Ward Street and Lilli Pilli Street is required to facilitate construction vehicle egress.

The lead contractor is to submit to Council, any relevant Works Zones and/or Road Occupancy applications.

Refer to Modscape documentation for further traffic management measures (i.e. TGS).

4.13 Pedestrian Access

Pedestrian access to and around the site is to be maintained at all times. Pedestrian gates at the Site will be controlled and restricted to approved personnel entry only.

The frontage along Ward Street is currently provided with a pedestrian footpath, where temporary fencing and management from a TfNSW accredited traffic controller will maintain pedestrian access at all times (refer to Drawing # 01T-0103 & 01T-0104 in Appendix A). The traffic controller will need to have special focus on school children movements due to the fact that the site is an operational school, particularly around times of pickup and dropoff. If required, additional traffic controllers are to be utilised to ensure safe operation of the school and construction site during the high movement times.

4.14 Special Deliveries

Any oversized vehicles that are required to travel to the site will be dealt with separately, with the submission of relevant permits to and subsequent approval by the City of Parramatta Council prior to any delivery.

4.15 Construction Personnel Parking

There will be limited parking available on site for construction personnel due to site constraints. Contractors and construction workers are encouraged to carpool or utilise public transport within the site vicinity. Additionally, all site personnel are to be advised that they are not to park on-street in the vicinity of the development site and within 400 metres (5 minutes' walk) of the site as shown in Figure 8, previously presented in Section 3.3.

There is parking available on Dent Street to the north, however, there is no direct access back to site from that location without crossing school grounds. The methodology proposed for this construction works minimises the number of personnel and a maximum of 50 construction workers are estimated to be on site. The project team will negotiate with the school regarding onsite parking opportunities, particularly when reduced student capacity and school holidays are in place.

Parking along the site frontage (particularly Ward and Lilli Pilli Street) and within close proximity to the site is not permitted. Head contractor is to undertake measures to deter construction workers to do so (i.e. recording number plates and issuing warnings, as required). Daily checks are to be conducted by the head contractor to enforce these conditions to ensure they are adhered to, as a condition of working on the construction site.

4.16 Work Site Security

The Site is to be secured by the use of appropriate hoarding / temporary steel fencing (specified in Australian Standards and WorkCover requirements) along the frontage of the Site on Ward Street for segregation and protection for pedestrians and the work area throughout the entire construction stage. The exact location is to be agreed prior to the commencement of the works.

All access points are to be securely locked when site activities are not in progress.

4.17 Plant/Equipment Management

At the commencement of construction, plant and equipment, including construction hoarding/scaffolding material, site sheds, mobile cranes and machinery will be required to be delivered to the site. The delivery and removal of plant and equipment to and from the site will be undertaken from the on-site materials handling/loading area, via the use of machine floats.

The delivery and removal of plant and equipment that requires a wide or long load vehicle will be subject to a separate application/permit and separate prior approval from City of Parramatta and other relevant

authorities. In order to minimise traffic disruption during the delivery of the plant and equipment, it is proposed to undertake this work during the evening/early morning period. All plant and equipment deliveries will be carried out in accordance with Council's requirements and the NSW Police regulations.

4.18 Spoil Management

Contaminated material will be checked, sorted and treated prior to the removal from the site. Contaminated material will be classified in accordance with the provisions of the Waste Classification Guidelines Part 1: Classifying waste (EPA, 2014).

All construction work involving the removal and disposal of asbestos cement will be undertaken by appropriately qualified contractors duly licensed with SafeWork NSW, holding either a Friable (Class A) or a Non-Friable (Class B) Asbestos Removal License whichever applies.

During the removal of asbestos material from the site, signs containing the words 'DANGER ASBESTOS REMOVAL IN PROGRESS' will be erected in prominent visible positions on the site. The signs will be in accordance with AS1319-1994 Safety signs for the occupational environment for size, illumination, location and maintenance.

All trucks removing spoil from the site will be loaded to prescribed weight limits and loose material will be covered during transport from the site. Loose material will be removed from all vehicles and/or machinery before leaving the site and entering the road system.

All vehicles leaving the site will be cleaned. The construction contractor will be responsible for locating a truck wash facility or other appropriate cleaning mechanism adjacent to the construction access driveways. Any run-off from the washing down of vehicles will be directed to the sediment control system to be located within the site.

The loading of spoil onto trucks will be carried out on-site in an approved and controlled manner. The management of the on-site materials handling/loading area and the movement of trucks on and off the site will be the responsibility of the contractor.

4.19 Staff Induction

All staff and subcontractors engaged on site will be required to undergo a site induction. The induction will include permitted access routes to and from the construction site for all vehicles, as well as standard environmental, OH&S, driver protocols and emergency procedure. Additionally, the lead contractor will discuss TMP requirements regularly as part of toolbox talks and advise workers of public transport and carpooling opportunities. There will be particular focus on the fact that the site is an operational school, and the requirements of all staff and subcontractors to adhere to Traffic Guidance Scheme requirements and the operation of the same – to ensure road safety and network efficiency.

4.20 Adjoining Properties

Access to all adjoining properties will be maintained throughout the works.

4.21 Occupational Health and Safety

Any workers required to undertake works or traffic control within the public domain shall be suitably trained and will be covered by adequate and appropriate insurances. All traffic control personnel will be required to hold TfNSW accreditation in accordance with Section 8 of Traffic Control at Worksites.

4.22 Method of Communicating Traffic Changes

TGSs in accordance with Australian Standards (AS 1742.3 – Traffic Control Devices for Works on Roads) and TCAWS manual will advise motorist of upcoming changes in the road network.

The contractor shall each morning, prior to work commencing, ensure all signage is erected in accordance with the TGS and clearly visible. Each evening, upon completion of work, the contractor is to ensure signage is either covered or removed as required. Sign size is to be size "A".

No deviation from the approved TGS shall be permitted, unless otherwise approved by Council and certified by an RMS accredited personnel.

The associated TGS road signage will inform drivers of works activities in the area including truck movements in operation.

Prior to commencement of works on site the contractor is to inform neighbouring properties of proposed works and provide site contact information by means of a letter box distribution. Additionally, a minimum fourteen (14) days notification must be provided to adjoining property owners prior to the implementation of any temporary traffic control measures.

4.23 Driver Code of Conduct

All heavy vehicle drivers are required to follow the ingress and egress routes in a "forward in, forward out" manner as specified in Section 4.8, whilst adhering to all road rules and regulations. This is essential to minimise the impacts of earthworks and construction on the local and regional road network. Should there be a Traffic Guidance Scheme (TGS) required to manage construction activity, all construction vehicles entering or exiting the site shall operate under the direction of a TfNSW accredited traffic controller at all times, to minimise conflicts with other road users. Furthermore, construction traffic activity shall only occur within the permitted hours of work (see Section 4.4) to minimise road traffic noise.

This code of conduct will be advised to all drivers engaged on site at the staff induction, where all demolition and construction vehicles (excluding worker vehicles) are to be contained wholly within the site and must enter the site completely before stopping.

A Driver Code of Conduct leaflet has been prepared as part of this CPTMP for distribution to truck drivers and operators, included as Appendix C.

4.24 Traffic Incident Management

In the event of an incident, the Project Manager is to be notified immediately.

During an emergency, construction personnel are to call the emergency number (000) before notifying the Project Manager.

Any incident that occurs within the public road shall be reported to Transport Management Centre (TMC).

4.25 Hazard and Risk Identification

All construction projects entail a set of risks—from a transport perspective—that may need to be mitigated. Some of these hazards and risks are related to:

- moving traffic
- queued traffic

- site vehicle access and egress points
- topographical constraints

To assess the transport risks associate with the construction work, a risk matrix has been prepared as shown in Table 6. The definitions of the risk matrix are as follows:

Likelihood (L)

- Almost unprecedented: not expected to occur in the next 100 years.
- Very unlikely: expected to occur once every 10 to 100 years.
- Unlikely: expected to occur once every 1 to 10 years.
- Likely: expected to occur once during any given year.
- Very likely: expected to occur occasionally (1 to 10 times) during any given year.
- Almost certain: expected to occur multiple times (10 or more times) during any given year.

Consequence (C)

- Insignificant: Illness, first aid or injury not requiring medical treatment. No lost time.
- Minor: Minor injury or illness requiring medical treatment. No lost time post medical treatment.
- Moderate: Minor injuries or illnesses resulting in lost time.
- Major: 1 to 10 serious injuries or illnesses resulting in lost time or potential permanent impairment
- Severe: single fatality and/or 11 to 20 serious injuries or illnesses* resulting in lost time or potential permanent impairment.
- Catastrophic: multiple fatalities and/or more than 20 serious injuries or illnesses* resulting in lost time or potential permanent impairment.

Risk Rating (R)

- Low (L)
- Medium (M)
- High (H)
- Very High (VH)

Table 6: Risk Matrix

			Consequence				
		Insignificant C6	Minor C5	Moderate C4	Major C3	Severe C2	Catastrophic C1
	Almost unprecedented L6	L	L	L	L	М	М
Likelihood	Very unlikely L5	٦	L	L	М	М	Н
Likeli	Unlikely L4	L	L	М	М	Н	Н
	Likely L3	L	М	М	Н	Н	VH

Very likely L2	М	М	н	Н	VH	VH
Almost certain L1	М	Н	Н	VH	VH	VH

The risks of the construction activities and the proposed mitigation measures are provided in Table 7.

Table 7: Risks and Mitigations

Risk	L/C/R	Mitigation	L/C/R
Construction vehicles unexpectedly stopping/slowing down after turning off Carlingford Road and possibly being rearended by other motorists	L4/C4/M	Provide adequate signage to forewarn other motorists to the presence of large construction vehicles.	L5/C5/L
The partial road closure during the setup of Building S and Building T will reduce the capacities on Ward Street and limit accessibility for residents.	L1/C6/M	Provide appropriate signage prior to the setup of Building S and Building T to inform other motorists of changes in road conditions. Inform residents on what the works will involve and how the road network will be changed in advance so residents understand that Ward Street will be one way during the building setup.	L5/C6/L

4.27 CPTMP Approval, Monitoring and Review

This CPTMP has been reviewed and endorsed by the designer's one-up manager who holds a current Prepare Works Zone Traffic Management Plan qualification. This approved CPTMP has been used to inform the development of all TGSs for the work.

Regular monitoring and review are to be conducted throughout the life of the project to ensure that the CPTMP remains current and addresses all risks at the work site for the duration of the project or activity.

To ensure that this CPTMP is kept up to date, the activities identified in Table 8 will be undertaken to facilitate review and continuous improvement

Table 8: Monitoring Activities

Stage	Activity	Purpose	Qualification	Tools and checklists
Planning	TGS verification	To ensure that the TGS selected or designed is suitable for the works and location.	ITCP or PWZTMP	TCAWS Appendix E.2 TGS verification checklist
During TTM	Weekly TTM inspections (includes preopening inspection)	To ensure that the CPTMP and relevant TGS are appropriate and operating safely, effectively and efficiently	PWZTMP	TCAWS Appendix E.3 Weekly TTM inspection checklist
	Shift TTM inspections	To ensure that the TGS is implemented as designed. This includes at a minimum, twice per shift and when: • A TGS is installed, changed or updated.	ITCP or PWZTMP	TCAWS Appendix E.4 Shift / Daily TTM inspection checklist

Stage	Activity	Purpose	Qualification	Tools and checklists
		At regular frequency afterwork commences, recommended every 2hours; and Once after care arrangements have been installed if required		
	CPTMP review	To ensure that CPTMP controls are achieving the required outcomes.	PWZTMP	Not provided
	Client inspections	Verification of TTM through the Transport Traffic Engineering Services, Work Health and Safety Branch, Surveillance Officers or other client representatives.	Divisionally determined	Not provided
Post Completion	Post-completion inspection	To ensure that the site has been demobilised as planned and is safe for opening to traffic	ITCP or PWZTMP	Appendix E.5 Post completion inspection checklist

All relevant changes must be considered and recorded in the CPTMP with any changes made by an appropriately qualified person. A copy of all documentation relating to the endorsement of the changes must be available to be accessed, either electronically or in hard copy, by the person responsible for the works.

5 TGS Confirmation and Approval

In the event a Traffic Guidance Scheme (TGS) is required, the lead contractor is to design and set out the TGS in accordance with Issue 6.0 of the Traffic control at work sites Technical Manual, November 2020 (TCAWS).

It is noted that any changes to the existing parking restrictions will require a minimum fourteen (14) days notification to adjoining property owners prior to the implementation of any temporary traffic control measures.

Any revisions or additional TGSs ones must be prepared by a PWZTMP qualified person upon engagement of the traffic management contractor and prior to commence of works on site.

5.1 TGS Verification

TCAWS TGS D.4.7 is to be approved as being appropriate for use at the work site. Site confirmation must be undertaken via the completion of the TGS verification.

A TGS verification must be undertaken to confirm the selected or designed TGS is fit for purpose. A TGS verification must be completed in accordance with Section 8.1.2 TGS verification by an ITCP or PWZTMP qualified person. TGS verification must include an inspection of the work site where the TGS will be implemented.

5.2 TGS Approval

The PWZTMP qualified person who has designed or modified the relevant TGS has approved the TGS for use. Approval of the TGS includes:

- Review of the relevant TMP, risk assessment and associated TTM specific documentation;
- Design, redesign or modification of the TGS must be in accordance with the requirements of TCAWS;
- Confirmation that the TGS provides the relevant information for the ITCP person to safely implement onsite.

The one up manager of the PWZTMP qualified person has approved the TGS, including:

- Any non-standard or unaccepted signs or devices;
- Any departures from the requirements of TCAWS;
- If a manual traffic controller is proposed for use.

6 Summary

This CPTMP has been prepared for the construction activities associated with the redevelopment work at Epping West Public School located at 96-104 Carlingford Road, Epping. This report outlines the traffic process associated with the construction work, as well as the traffic management measures to improve and regulate the safety of pedestrians, cyclists, motorists, and works in the site vicinity.

It is envisaged that this document will be continually reviewed and amended if required, in the event of changes to design, the surrounding road network, or additional requirements of Council, TfNSW, or any other relevant authority.

Appendix B Traffic Management Strategy – Data Collection (Mandatory)

Traffic management strategy - data collection (mandatory)

Project information and data collection

For the risk associated with Temporary Traffic Management to be effectively managed, it is important that the conditions and constraints associated with the works are understood. For this to be achieved, the client must collect the relevant data and information and transfer this to the delivery partner to ensure an informed TMP is developed.

Use this form to complete the Site information component of your traffic management strategy. Once you have entered all the necessary information to the form you will be able to download as pdf.

Please note - Data collected via this form will not be saved for future retrieval and cannot be edited at a later date. You will need to ensure you keep a copy for your own records.

Work related information

Project Redevelopment of Epping West Public School

Current project phase Pre-Construction

Activity/works Demolition, alterations and refurbishment

Location 96-104 Carlingford Road, Epping

Start of works Monday, September 20, 2021

End of works Wednesday, November 30, 2022

Hours of operation Day

Day - From: / To: 7:00 AM - 6:00 PM

Site related information

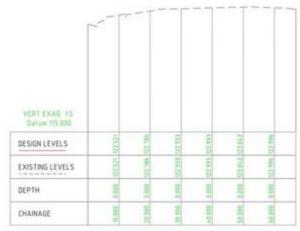

Setting of works

Urban

Describe the unique cross-sectional features

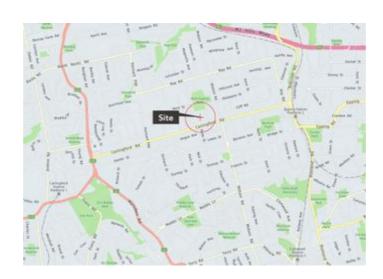

The cross section of the site is relatively flat. The attached cross section shows the east-west cross section of the site. The cross section of the adjacent local road falls going north.

Attach a cross section of location of works

ALIGNMENT - (2) LONG SECTION

Attach a photo of location of works

Posted speed limit/s

Road name Ward Street Limit 50

Are intersections impacted by the project length?

Traffic data

Traffic volumes - Average Daily 3000

Traffic (ADT):

Traffic peak times AM 8:15 AM - 9:15 AM

Traffic peak times PM 3:00 PM - 4:00 PM

Traffic composition Heavy vehicles

% of Heavy vehicles:

Provide details:

The ADT and traffic composition are based on traffic survey volumes taken from the original SSDA. The

ADT was calculated based on the assumption that the peak hour traffic accounts for 10% of the

Vulnerable road users and other facilities

On-street parking

Transport facilities (bus stops)

Footways

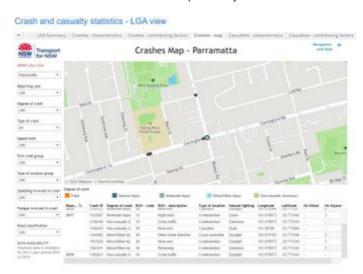

Provide further details:

The site is a primary school which will continue to be operational during the construction works. The footways and parking around the school will continue to be in use by students, parents and local residents for the majority of the construction works. During the set up for the building S and Building T a crane will need to be planted on Ward Street which will limit the parking available on Ward Street. This is to be a temporary measure for the duration of the building S and building T setup which may take approximately 1 and 2 weeks respectively. There are also bus stops located at the frontage of the site on Ward Street which are used by students.

Crash history at location

There have been 2 crashes in the last 5 years along on the Carlingford Road frontage of Epping West Public School. There has not been any crashes on Ward Street in the past 5 years.

Include any supporting documentation

Constraints

Significant traffic generators

Schools

Community facilities

Events

Schools

Specify location

96-104 Carlingford Road, Epping

Duration / time restrictions

8:00am - 4:00pm

Impacts

The works will take place within the school boundary. The construction personnel will require some parking spaces and also increase the traffic volumes along Ward Street.

Other

Road environment constraints

Construction activities are to be conducted within the site and not within the road reserve, except for public domain work associated with driveways and landscaping and the building set up works which will require the occupancy of Ward Street for the duration of the building set up to allow the planting of a crane.

Personal Information Collection Notice

Our Privacy Statement explains why we are collecting your Personal Information and how we will use and manage it in accordance with the Privacy and Personal Information Act 1998, and, where relevant, the Health Records and Information Privacy Act 2002. You can obtain a copy of our <u>Privacy Statement</u> or call us on 13 22 13 to request a copy.

Post Approval – Consultation

Consultation needs to be meaningful, done with courtesy and respect and be well documented. These are people/ organisations that we need to be building meaningful relationships with.

Conditions of all consent can require consultation with a range of stakeholders. Consultation in the post approval world needs to be well documented to satisfy the condition requirements.

Examples include Council, service providers (eg. Electricity gas etc.), consult with local bus provider and TfNSW.

Read each condition carefully, any reference to consult triggers consultation.

Typically on State Significant Development, there will be a specific consultation condition as to how this piece can be appropriately addressed.

Consultation is not:

- A token gesture
- Done at the end of the piece of work,
- An email to the relevant stakeholder with no response;
- A meeting with the stakeholder with no meeting minutes.

Consultation is:

- Meaningful
- Done prior to the requirement,
- · Captures an outcome,
- Identifies matters resolved,
- Identifies matters unresolved,
- Any disagreements are disclosed; and
- How we are going to address unresolved matters?

How to capture all the relevant details on consultation requirements? Any consultation requirement in a condition is required to be accompanied with the following table:

Post Approval Consultation Record

Identified Party to	City of Parramatta Council		
Consult:			
Consultation type: When is consultation required?	'		
Why	To discuss any relevant input from Council as required by Consolidated Conditions for SSDA 9250948 – Epping West Public School (Condition B13).

0408 507 855

Hansen Yuncken (Site Manager)

Ross Cannavo

NSW Department of Education Epping West Public School

Driver Code of Conduct

HANSENYUNCKEN

This Driver Code of Conduct applies to all personnel and any other person conducting business for NSW Department of Education whether a direct employee of Hansen Yuncken or employed by another organisation providing service or working with Hansen Yuncken.

General Requirements

- As a driver you are required to know and comply with all the road rules pertaining to your vehicle;
- You are expected to hold a valid driver's licence for the class of the vehicle you are operating;
- Undertake a site induction carried out by an approved member of the construction staff or suitably qualified person;
- Participate in regular toolbox meetings with appropriate and qualified person; and
- You are to operate the vehicle in a safe manner within and outside the construction site and comply with the direction of authorised site personnel while inside the site.

Truck Routes

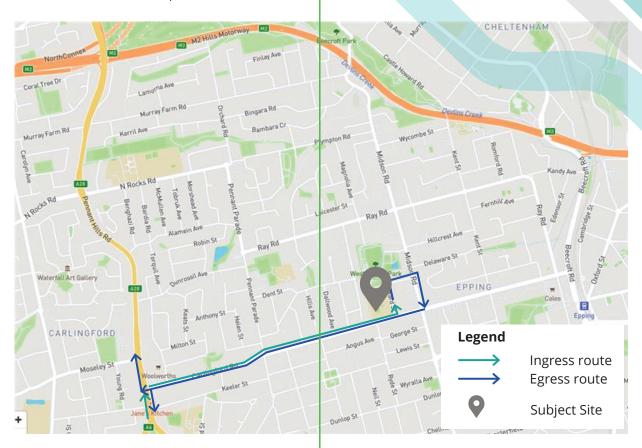

Heavy vehicle drivers are to carefully plan their routes so that state and regional roads are given priority for route selection, keeping in mind the certain restrictions during particular times of the day (i.e. approved Temporary Road Occupancy and/or Works Zone permit conditions).

Other Considerations

- Speed Limits All heavy vehicle drivers are to observe the posted speed limits, within or outside of the construction site. Keep in mind that there are changes in traffic conditions and altered speed limits are posted on approach to the site;
- Driver Fatigue Driver fatigue is a road safety hazard and one of the biggest causes of accidents especially for heavy vehicle drivers. All drivers have a duty to not drive a vehicle while impaired by fatigue.
- Covering Loads RMS requires all load covers to secure and contain all materials within the vehicle and trailer;

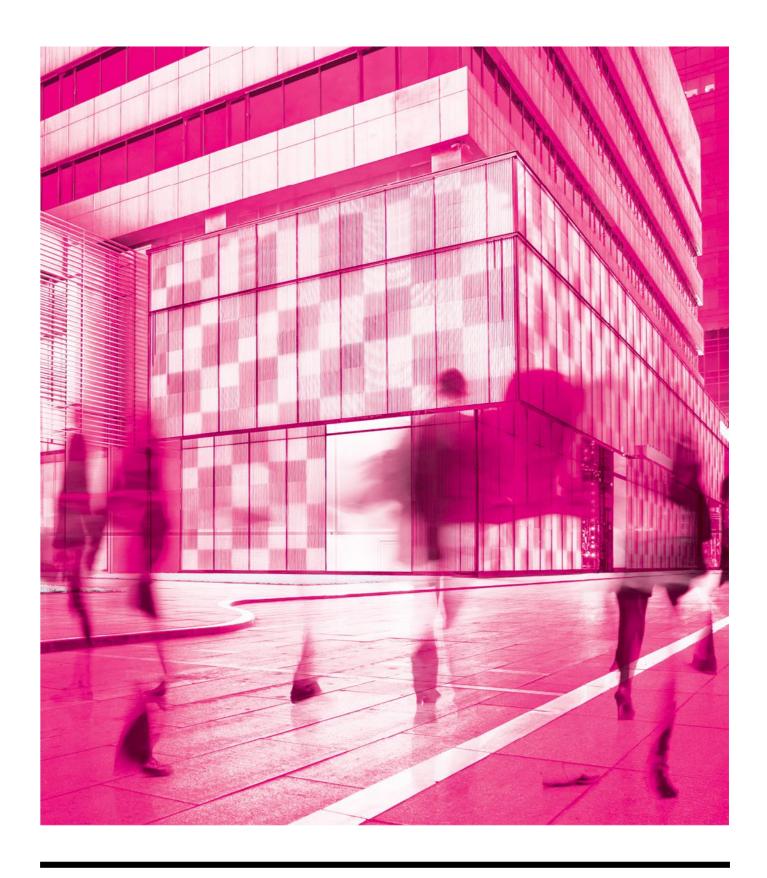

Other Considerations

- Heavy Vehicle Interval To increase road safety, heavy vehicles leaving the construction site should be separated, as far as practicable, a minimum of a 10-minute interval;
- Vehicle Breakdowns In the case of a breakdown, the vehicle must be towed to the nearest breakdown point as soon as possible and reported to the Service NSW Transport Management Centre (131 700)

1. Introduction

1.1 Project Summary

ptc. has been engaged by Hansen Yuncken to prepare a preliminary Construction Workers Management Strategy (CWMS) associated with the proposed redevelopment and construction of Epping West Public School, located at 96-104 Carlingford Road, Epping NSW 2121.

This CWMS is prepared to address the SSDA Condition B18, as outlined below:

Condition B18

Prior to the commencement of construction, the Applicant must submit a Construction Worker

Transportation Strategy to the Certifier. The Strategy must detail the provision of sufficient parking facilities or other travel arrangements for construction works in order to minimise demand for parking in nearby public and residential streets or public parking facilities. A copy of the strategy must be provided to the Planning Secretary for information.

The location of the site is shown in Figure 1.

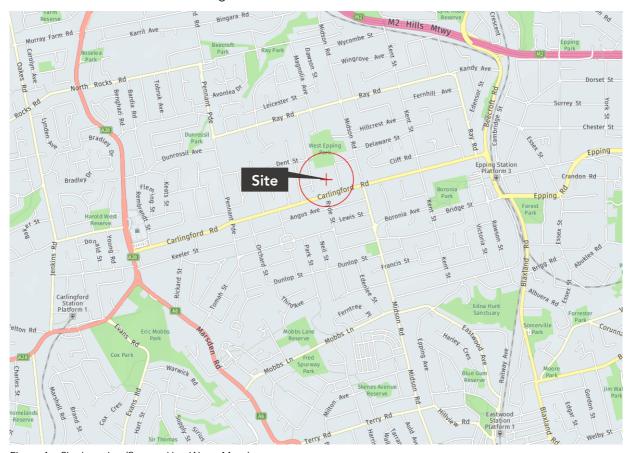

Figure 1 – Site Location (Source: HereWego Maps)

2. Background Information

2.1 Parking Facilities

Figure 2 shows nearby existing parking facilities within 1km radius – 2km radius catchments, where construction workers can transfer to connecting bus services to the construction site.

Figure 2 – Parking facilities surrounding the site within 800m – 2km radius catchments

With reference to the NSW Planning Guidelines for Walking and Cycling 2004, a catchment of up to 800m distance is considered a comfortable walking distance. For distances exceeding the 800m catchment (i.e. 1-2km radius illustrated above), public transport options in the vicinity will allow for travel mode changes (i.e. private vehicle to public transport) to access the construction site.

Table 1 below summarises the car parking facilities identified above and the opening hours and parking fees.

Table 1 – Summary of parking facilities in the vicinity of the site

Facility	Catchment distance to Site	Description	Opening Hours	Parking Restrictions / Fees
1	Within 800m	West Epping Park	24 hours	Unrestricted off-street parking
2	Within 1km radius	Rawson Street Car Park	24 hours	2P Limit Per Day 9am – 5pm M-S
3	Within 2km radius	Epping Commuter On-Street Parking	24 hours	Free unrestricted on-street angled parking
4	Within 2km radius	Secure Parking – 37/41 Oxford St	24 hours	\$6 flat rate all day parking
5	Within 2km radius	Secure Bike Locker	24 hours	\$50 for 3 calendar months, \$100 for 6 calendar months, \$150 for 9 calendar months, \$180 for 12 calendar months
6	Within 2km radius	Carlingford Village Car Park	24 hours	Customer only uncontrolled parking
7	Within 2km radius	Carlingford Oval Parking	24 hours	Unrestricted parking
8	Within 2km radius	Cheltenham Commuter On-Street Parking	24 hours	Free unrestricted on-street angled parking
9	Just outside 2km radius	Eastwood Glen St Public Parking	24 hours	3P Limit 8:45am – 6pm Mon – Sun, 6pm – 9pm Thursday
10	Just outside 2km radius	Eastwood Commuter Car Park	24 hours	Free unrestricted off-street parking
11	Just outside 2km radius	Eastwood Council Free Car Park (Temporarily closed due to Covid- 19)	24 hours	2P Limit 8:45am – 6pm Mon – Sat, 6pm – 9pm Thursday
12	Just outside 2km radius	Beecroft Road Council Car Park	24 hours	Limited time free parking

2.2 Public Transport

The locality has been assessed in the context of available forms of public transport that may be utilised by prospective staff and visitors. When defining accessibility, the NSW Guidelines to Walking & Cycling (2004) suggest that 400m-800m is a comfortable walking distance.

The area of comfortable walking distance is shown in Figure 3.

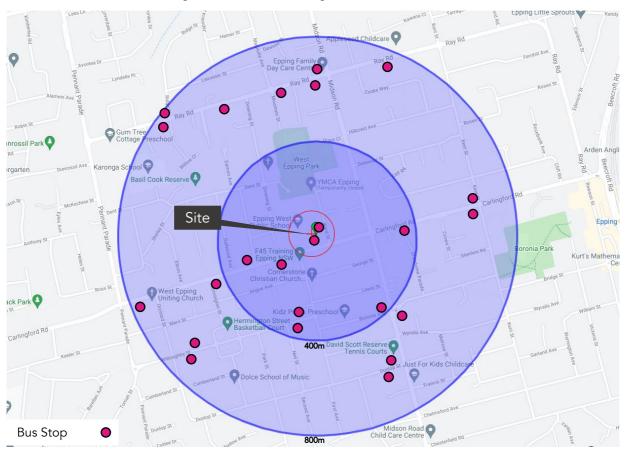

Figure 3 - Public Transport Accessibility (Source: Nearmap)

2.2.1 Train Services

The nearest railway station to the subject site is Epping Train and Metro Station, which is approximately 1.6-km to the east. The services available within Epping Station are summarised below:

- T9 Northern Line Hornsby to North Shore via City
- CCN Central Coast & Newcastle Newcastle to Central via Strathfield or Gordon
- Metro North West Line Chatswood to Tallawong

Although Epping Station is located outside of comfortable walking distance (400m – 800m) as suggested by the NSW Guidelines of Walking and Cycling (2004), transport mode change opportunities with bus services are available for commuters travelling by public transport to the site.

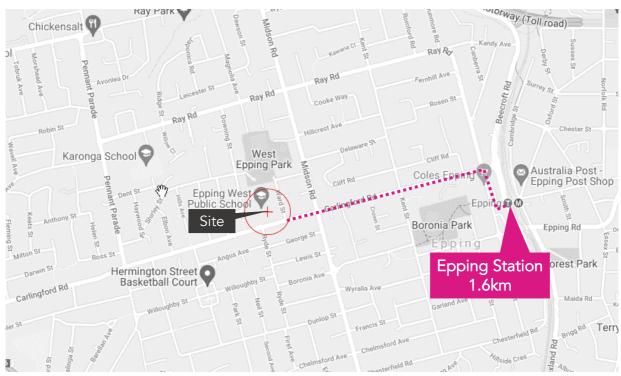

Figure 4 - Access to Epping Station

2.2.2 Bus Services

The subject site is well serviced with multiple bus stops within a comfortable walking distance. A summary of the available bus routes that service the site is shown in Table 2.

Table 2 - Bus Route Summary

Bus Route	Coverage (to and from)	Service Frequency
630	Blacktown – Epping	Weekdays: AM/PM peak – every 30 minutes Off Peak – every 1hr Saturday: No service available Sunday and public holidays: No service available
550	Macquarie Park to Parramatta via Epping	Weekdays: AM/PM peak – every 10 minutes Off Peak – every 20 minutes Saturday: Every 20 minutes Sunday and public holidays: Every 20 minutes
546	Parramatta to Epping via Oatlands & North Rocks	Weekdays: AM/PM peak – every 30 minutes Off Peak – every 1 hour Saturday: Every 1 hour Sunday and public holidays: Every 1 hour
549	Parramatta to Epping via North Rocks	Weekdays: AM/PM peak – every 15 minutes Off Peak – every 1 hour Saturday: Every 1 hour Sunday and public holidays: Every 1 hour
541	Eastwood to Epping	Weekdays: AM/PM peak – every 30 minutes Off Peak – every 1 hour Saturday: No service available Sunday and public holidays: No service available

2.2.3 Active Transport

It is noted that partial low and moderate difficulty on-road cycling infrastructure are currently available within the vicinity of the site as shown in Figure 5. However, given the location of the construction site, it is anticipated that users of the development will predominantly travel to/from the Site via private vehicles connecting to public or active transport modes.

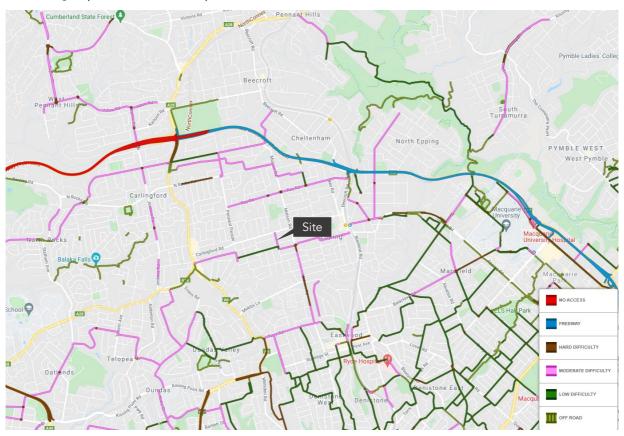

Figure 5 - Cycling Infrastructure (Source: RMS Cycleway Finder)

3. Construction Worker Transportation Strategy

3.1 Modes of Travel

A peak of approximately 50 workers is anticipated to work on site at any one time. The following summarises the transportation strategies for construction workers travelling to the site via different modes of travel.

3.1.1 Private Vehicle

It is anticipated that construction workers will most likely travel by private vehicle, which will serve as the predominant transportation mode in comparison to public transport (i.e. train or bus) or active transport (i.e. walking and cycling). Further, the current Covid-19 pandemic has also driven travel modes to skew toward private vehicle travel, comprising a higher percentage than a typical non-pandemic scenario.

Figure 2 and Table 1 presented in Section 2.1 summarises the available parking facilities within approximately 2km radius from the construction site. However, it is noted that only parking facilities no. 1, 3, 4, 7, 8 and 10 (see Table 3 below) will become parking options for construction workers due to free or low cost flat rate unrestricted parking.

Table 3 – Parking facility options for construction workers

Facility #	Location	Description	Opening Hours	Parking Restrictions / Fees
1	Within 800m	West Epping Park	24 hours	Unrestricted off-street parking
3	Within 2km radius	Epping Commuter On- Street Parking	24 hours	Free unrestricted on-street angled parking
4	Within 2km radius	Secure Parking – 37/41 Oxford St	24 hours	\$6 flat rate all day parking
7	Within 2km radius	Carlingford Oval Parking	24 hours	Unrestricted parking
8	Within 2km radius	Cheltenham Commuter On-Street Parking	24 hours	Free unrestricted on-street angled parking
10	Just outside 2km radius	Eastwood Commuter Car Park	24 hours	Free unrestricted off-street parking

Parking facility 1 at West Epping Park is the closest off-street parking available for construction workers within comfortable walking distance. Though these parking spaces do not provide direct access to the site without crossing through the school, it is anticipated this is likely a suitable option due to decreased parking demand associated with West Epping Park due to the current Covid-19 pandemic.

Epping, Eastwood and Cheltenham Train Stations (parking facilities no. 3, 8 & 10) have all day free unrestricted commuter car parking that will likely be options for construction workers travelling to the

construction site to park in. Construction workers can then transfer to bus services to travel to the construction site.

As the anticipated number of construction workers are quite low, carpooling would also typically be encouraged (if considered acceptable and/or safe under advice from the Government, due to the current Covid-19 pandemic), where construction workers living within close proximity can consider.

3.1.2 Public Transport

As discussed in Section 2.2, Epping Station is the closest train station to the construction site, with various bus services also servicing the Site. Construction workers residing close to a train station are encouraged to travel to Epping Station and transfer to a connecting bus service to the Site.

Construction workers residing close to bus stops with bus services travelling to the vicinity of the site are also encouraged to travel to the site by public transport.

3.1.3 Active Transport

Secure Bike Lockers are available at Epping Train Station (parking facility no. 5), for cyclists to book and store bicycles at. Construction workers utilising this bicycle storage facility then can transfer to bus services to travel to the construction site.

Further, construction workers living within 400-800m radius to the construction site are encouraged to travel to the site by walking. Despite Epping Station being located approximately 1.6km away, walking to the site after alighting from a train service at Epping is also an option for construction workers to access the site.

3.2 Staff Induction

All staff and subcontractors engaged on site will be required to undergo a site induction. The induction will include permitted access routes to and from the construction site for all vehicles, as well as standard environmental, OH&S, driver protocols and emergency procedure. Additionally, the lead contractor will discuss TMP requirements regularly as part of toolbox talks and advise workers of public transport and carpooling opportunities.

Parking along the site frontage (particularly Ward and Lilli Pilli Street) and within close proximity to the site is not permitted. Head contractor is to undertake measures to deter construction workers to do so (i.e. recording number plates and issuing warnings, as required). Daily checks are to be conducted by the head contractor to enforce these conditions to ensure they are adhered to, as a condition of working on the construction site.

Refer to the Construction Traffic and Pedestrian Management Plan (CTPMP) for more information and the Drivers Code of Conduct that will be issued to all staff at the site induction.

4. Summary

This Construction Workers Transportation Strategy has been prepared for the travel of construction workers to undertake redevelopment construction works located at 96-104 Carlingford Road, Epping. This report outlines the transportation strategies for construction workers, outlining available transportation modes available in the vicinity of the site for private car travel, public and active transport options.

It is anticipated that this strategy provides sufficient transportation options for construction workers to avoid private car travel to the construction site due to the insufficient parking availability on site.

1 INTRODUCTION

Pulse White Noise Acoustics (PWNA) has been engaged to prepare a Construction Noise and Vibration Management Sub Plan (CNVMSP) for the construction of the Epping West Public School (EWPS) located at 96 Carlingford Road, Epping NSW.

Onsite unattended and attended noise levels have previously been determined for the project and included in the RWDI *Epping West Public School – Noise Impact Assessment* dated 21 April 2021 and reference: 2190042. The details of the acoustic survey included in the RWDI report have been used in this assessment.

A glossary of acoustic terminology used throughout this report is included in Appendix A.

The author of this report is a director of Pulse White Noise Acoustics who is a member of the Australian Acoustic Society, details including Ben's CV and membership of the AAS are included in Appendix B.

1.1 Site Layout and Development Overview

The proposed development is alterations and additions to an existing educational establishment. In summary, the proposed works will include:

- · Demolition works;
- Construction of a three (3) storey building in the south-eastern corner of the site and a two (2) storey building further north adjacent to the site's eastern boundary;
- Refurbishment and renovation works to existing buildings, with a small addition to the western side of an existing building;
- Removal of demountable buildings currently located predominantly on the northern part of the site and associated make good works to reinstate the oval and play space which is predominantly on the northern part of the site.

An existing building known as Building G (located between buildings F and H) is proposed to be demolished, Building G is a single storey classroom building.

The site is located to the north of Carlingford Road and the west of Ward Street, the works to be conducted as part of the constructions include buildings to the east of the exiting school grounds. See Figure 1 below.

Epping West Public School is bordered by residential dwellings along the western boundary as well as residence opposite on Ward Street to the east and residence opposite on Carlingford Road to the south. The West Epping Community Centre is located to the north of the site.

Residential receives which are located within proximity to the site include a combination of single and two storey dwellings with windows overlook the school property.

The nearest sensitive receivers to the site have been identified below.

Receiver 1: Single and two storey residential dwellings located to the west of the school located on Downing Street.

Receiver 2: Single and two storey residential dwellings located to the east of the school opposite on Ward Street.

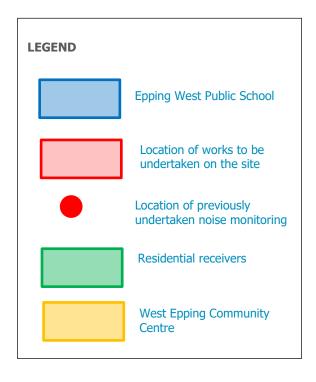

Receiver 3: Single storey residential dwellings located to the south of the school opposite on Carlingford Road.

Receiver 4: The West Epping Community Centre located to the north of the site

1.2 **SSD Compliance**

This report has been undertaken in accordance with the requirements of Item B14 of the project's conditions of consent.

Details of conditions of consent and sections of the report which include the required items required by the consent are included in the table below.

Table 1 **SSD Compliance Table**

SSD Condition number	Requirement	Report Reference for Satisfaction
B14	B14. The Construction Noise and Vibration Management Sub-Plan must address, but not be limited to, the following:	-
(a)	be prepared by a suitably qualified and experienced noise expert;	Ben white is a director of Pulse White Noise Acoustics, Ben's CV and membership of the Australian Acoustic Society is included in Appendix B.
(b)	describe procedures for achieving the noise management levels in EPA's Interim Construction Noise Guideline (DECC, 2009);	Sections 4.1
(c)	describe the measures to be implemented to manage high noise generating works such as piling, in close proximity to sensitive receivers;	Section 6.1 and 6.2
(d)	include strategies that have been developed with the community for managing high noise generating works;	Section 6.2 and Section 6.7
(e)	describe the community consultation undertaken to develop the strategies in condition B14(d);	Section 6.4.5 and Appendix C
(f)	include a complaints management system that would be implemented for the duration of the construction; and	Section 6.5
(g)	include a program to monitor and report on the impacts and environmental performance of the development and the effectiveness of the implemented management measures in accordance with the requirements of condition B11	Section 6.2.2 and Section 6.3.2

Note 2: The LAeq is the energy average sound level. It is defined as the steady sound level that contains the same amount of acoustical energy as a given time-varying sound.

2 EXISTING ACOUSTIC ENVIRONMENT

Measured noise levels from the attended noise survey undertaken as part of the RWDI *Epping West Public School – Noise Impact Assessment* dated January 2021 and reference: 2190042-1600 have been used in this assessment.

As part of the RWDI *Epping West Public School – Noise Impact Assessment* dated 21 April 2021 and reference: 2190042 as assessment of background noise levels within the vicinity of the site has been undertaken. The *Epping West Public School – Noise Impact Assessment* includes an assessment which has been stated to be in accordance with the NSW EPA's *Noise Policy for Industry* (NPI, 2017).

The Rating Background Noise Level (RBL) is the background noise level used for assessment purposes and includes the 90th percentile of the daily background noise levels during each assessment period, being day, evening and night. The RBL LA90 (15minute) and LAeq noise levels presented within the *Epping West Public School – Noise Impact Assessment* are summarised in Table 2.

Table 2 Measured Ambient Noise Levels corresponding to the NPI's Assessment Time Periods

Measurement Location	Daytime ¹ 7:00 am to	Daytime ¹ 7:00 am to 6:00 pm		Evening ¹ 6:00 pm to 10:00 pm		7:00 am

	7:00 am to 10:00 pm LAeq (whole period) ² (dBA)

Note 1: For Monday to Sunday, Daytime 7:00 am - 10:00 pm; Night-time 10:00 pm - 7:00 am.

Note 2: The Laeq is the energy average sound level. It is defined as the steady sound level that contains the same amount of acoustical energy as a given time-varying sound.

3 PROJECTS CONDITIONS OF CONSENT

Relevant noise and vibration criteria for construction activities includes item B14 of the SSD which includes the following:

Construction Noise and Vibration Management Sub-Plan (see condition B14 for required inclusions)

- B14. The Construction Noise and Vibration Management Sub-Plan must address, but not be limited to, the following:
- (a) be prepared by a suitably qualified and experienced noise expert;
- (b) describe procedures for achieving the noise management levels in EPA's Interim Construction Noise Guideline (DECC, 2009);
- (c) describe the measures to be implemented to manage high noise generating works such as piling, in close proximity to sensitive receivers;
- (d) include strategies that have been developed with the community for managing high noise generating works;
- (e) describe the community consultation undertaken to develop the strategies in condition B14(d);
- (f) include a complaints management system that would be implemented for the duration of the construction; and
- (g) include a program to monitor and report on the impacts and environmental performance of the development and the effectiveness of the implemented management measures in accordance with the requirements of condition B11

The project has included a *Community Communication Strategy* as require in Item B7 of the consent, which includes the following:

Community Communication Strategy

B7. No later than 48 hours before the commencement of construction, a Community Communication Strategy must be submitted to the Planning Secretary for information. The Community Communication Strategy must provide mechanisms to facilitate communication between the Applicant, the relevant Council and the community (including adjoining affected landowners and businesses, and others directly impacted by the development), during the design and construction of the development and for a minimum of 12 months following the completion of construction

The Community Communication Strategy must:

- (a) identify people to be consulted during the design and construction phases;
- set out procedures and mechanisms for the regular distribution of accessible information about or relevant to the development;
- provide for the formation of community-based forums, if required, that focus on key environmental management issues for the development;
- (d) set out procedures and mechanisms:
 - through which the community can discuss or provide feedback to the Applicant;
 - through which the Applicant will respond to enquiries or feedback from the community; and
 - (iii) to resolve any issues and mediate any disputes that may arise in relation to construction and operation of the development, including disputes regarding rectification or compensation.

Details of the *Community Communication Strategy* are included in Appendix C.

4 NOISE AND VIBRATION CRITERIA

Relevant noise and vibration criteria for construction activities are detailed below.

4.1 Construction Noise Objectives

Relevant construction noise objectives applicable to this project are outlined below.

4.1.1 NSW EPA (Former DECC) Interim Construction Noise Guideline (ICNG) 2009

Noise objective for construction and demolition activities are discussed in the *Interim Construction Noise Guideline* (ICNG). The ICNG also recommends procedures to address potential impacts of construction noise on residences and other sensitive land uses. The main objectives of the ICNG are summarised as follows:

- Promote a clear understanding of ways to identify and minimise noise from construction works;
- Focus on applying all "feasible" and "reasonable" work practices to minimise construction noise impacts;
- Encourage construction to be undertaken only during the recommended standard hours unless approval is given for works that cannot be undertaken during these hours;
- Streamline the assessment and approval stages and reduce time spent dealing with complaints at the project implementation stage; and
- Provide flexibility in selecting site-specific feasible and reasonable work practices in order to minimise noise
 impacts.

The ICNG contains a quantitative assessment method which is applicable to this project. Guidance levels are given for airborne noise at residences and other sensitive land uses.

The quantitative assessment method involves predicting noise levels at sensitive receivers and comparing them with the Noise Management Levels (NMLs). The NML affectation categories for residential receivers have been reproduced from the guideline and are listed in the table below.

Table 4 NMLs for quantitative assessment at residences

Time of Day	Noise Management Level LAeq(15minute) 1,2	How to Apply
Recommended standard hours: Monday to Friday 7 am to 6 pm Saturday 8 am to 1 pm No work on Sundays or public holidays	Noise affected RBL + 10 dB	 The noise affected level represents the point above which there may be some community reaction to noise. Where the predicted or measured LAeq(15minute) is greater than the noise affected level, the proponent should apply all feasible and reasonable work practices to meet the noise affected level. The proponent should also inform all potentially impacted residents of the nature of works to be carried out, the expected noise levels and duration, as well as contact details.
	Highly noise affected 75 dBA	 The highly noise affected level represents the point above which there may be strong community reaction to noise. Where noise is above this level, the relevant authority (consent, determining or regulatory) may require respite periods by restricting the hours that the very noisy activities can occur, taking into account: 1. Times identified by the community when they are less sensitive to noise (such as before and after school for works near schools, or mid-morning or mid-afternoon for works near residences. 2. If the community is prepared to accept a longer period of construction in exchange for restrictions on construction times.
Outside the recommended standard hours above	Noise affected RBL + 5 dB	 A strong justification would typically be required for works outside the recommended standard hours. The proponent should apply all feasible and reasonable work practices to meet the noise affected level. Where all feasible and reasonable practices have been applied and noise is more than 5 dB above the noise affected level, the proponent should notify the community.
m above gro measuring of levels may be Note 2 The RBL is the o	ound level. If the properor predicting noise levels is the higher at upper floors of overall single-figure backg the recommended standard	Indary that is most exposed to construction noise, and at a height of 1.5 ty boundary is more than 30 m from the residence, the location for is at the most noise-affected point within 30 m of the residence. Noise if the noise affected residence. Iround noise level measured in each relevant assessment period (during thours). The term RBL is described in detail in the NSW Industrial Noise

Construction noise levels at other noise receivers are outlined below:

- Construction noise levels within classrooms other educational institutions is not recommended to exceed 45dBA
 LAeq,15minuter, when measured internally.
- Construction noise levels at offices and retail outlets are not recommended to exceed 70dBA LAeq,15minute, when measured externally.

Based on the measured background noise levels summarised in section 2, and the NMLs outlined above, the construction noise criteria to be used in this assessment are listed in Table 5.

Table 5 NMLs as basis for the acoustic assessment

Receiver Types		NML, dB LAeq(15minu	te)	
	Standard Hours Monday to Friday: 7:00am to 6:00pm Saturday: 8:00am to 1:00pm		Outside Standard Hours All hours not listed in the adjacent column.	
Residential – Receiver 1 to the West	NAFL: 49 (RBL (39) + 10dB)	HNAL: 75	RBL + 5dB	
Residential – Receiver 2 to the east	NAFL: 49 (RBL (39) + 10dB)			
Residential – Receiver 3 to the south	NAFL: 60 (RBL (50) + 10dB)	•		
Community Centre – Receiver 4 to the north	NAFL: 49 (RBL (39) + 10dB)	HNAL: 70	RBL + 5dB	

4.2 Vibration Criteria

Effects of ground borne vibration on buildings may be segregated into the following three categories:

- Human comfort vibration in which the occupants or users of the building are inconvenienced or possibly disturbed.
- Effects on building contents where vibration can cause damage to fixtures, fittings and other non-building related objects.
- Effects on building structures where vibration can compromise the integrity of the building or structure itself.

4.2.1 Vibration Criteria – Human Comfort

Vibration effects relating specifically to the human comfort aspects of the project are taken from AV-TG. This type of impact can be further categorised and assessed using the appropriate criterion as follows:

- Continuous vibration from uninterrupted sources.
- Impulsive vibration up to three instances of sudden impact e.g., dropping heavy items, per monitoring period.
- Intermittent vibration such as from drilling, compacting or activities that would result in continuous vibration if operated continuously.

Table 6 Continuous vibration acceleration criteria (m/s²) 1 Hz-80 Hz

Location	Assessment	Preferred Val	Preferred Values		lues
	period	z-axis	x- and y- axis	z-axis	x- and y- axis
Critical working areas (e.g. hospital operating theatres, precision laboratories)	Day or night- time	0.0050	0.010	0.10	0.20
Residences	Daytime	0.010	0.0071	0.020	0.014
	Night-time	0.007	0.005	0.014	0.010
Offices, schools,	Day or night-	0.020	0.014	0.040	0.028
educational institutions and places of worship	time	0.04	0.029	0.080	0.058

Offices, schools, educational institutions and places of worship	0.40	0.80	0.40	0.80
Workshops	0.80	1.60	0.80	1.60

4.2.2 Vibration Criteria – Building Contents and Structure

The vibration effects on the building itself are assessed against international standards as follows:

- For transient vibration: British Standard BS 7385: Part 2-1993 "Evaluation and measurement for vibration in buildings Part 2: Guide to damage levels from ground borne vibration" (BSI 1993); and
- For continuous or repetitive vibration: German DIN 4150: Part 3 1999 "Effects of Vibration on Structure" (DIN 1999).

4.2.3 Standard BS 7385 Part 2 - 1993

For transient vibration, as discussed in standard BS 7385 Part 2-1993, the criteria are based on peak particle velocity (mm/s) which is to be measured at the base of the building. These are summarised below.

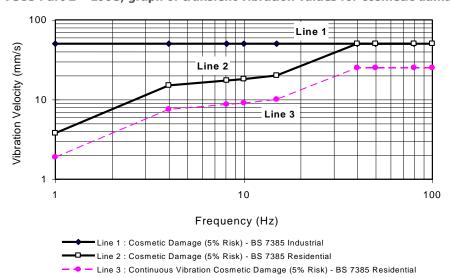

Table 9 Transient vibration criteria as per standard BS 7385 Part 2 - 1993

Line in Figure 2	Type of Building	Peak Component Particle Velocity in Frequency Range of Predominant Pulse		
		4 Hz to 15 Hz	15 Hz and Above	
1	Reinforced or framed structures Industrial and heavy commercial buildings.	50 mm/s at 4 Hz and above		
2	Unreinforced or light framed structures Residential or light commercial type buildings	15 mm/s at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz increasing to 50 mm/s at 40 Hz and above	

Standard BS 7385 Part 2-1993 states that the values in Table 9 relate to transient vibration which does not cause resonant responses in buildings.

Where the dynamic loading caused by continuous vibration events is such that it results in dynamic magnification due to resonance (especially at the lower frequencies where lower guide values apply), then the values in Table 9 may need to be reduced by up to 50% (refer to Line 3 in Figure 2).

Figure 2 BS 7385 Part 2 – 1993, graph of transient vibration values for cosmetic damage

In the lower frequency region where strains associated with a given vibration velocity magnitude are higher, the recommended values corresponding to Line 2 are reduced. Below a frequency of 4 Hz, where a high displacement is associated with the relatively low peak component particle velocity value, a maximum displacement of 0.6 mm (zero to peak) is recommended. This displacement is equivalent to a vibration velocity of 3.7 mm/s at 1 Hz.

The standard also states that minor damage is possible at vibration magnitudes which are greater than twice those given in Table 9, and major damage to a building structure may occur at values greater than four times the tabulated values.

Fatigue considerations are also addressed in the standard and it is concluded that unless the calculation indicates that the magnitude and number of load reversals is significant (in respect of the fatigue life of building materials) then the values in Table 9 should not be reduced for fatigue considerations.

4.2.4 Standard DIN 4150 Part 3 - 1999

For continuous or repetitive vibration, standard DIN 4150 Part 3-1999 provides criteria based on values for peak particle velocity (mm/s) measured at the foundation of the building; these are summarised in Table 10. The criteria are frequency dependent and specific to particular categories of structures.

Table 10 Structural damage criteria as per standard DIN 4150 Part 3 - 1999

Type of Structure	Peak Compone	nt Particle Veloc	ity, mm/s	
	Vibration at the	Vibration of		
	1 Hz to 10 Hz	10 Hz to 50 Hz	50 Hz to 100 Hz ¹	horizontal plane of highest floor at all frequencies
Buildings used for commercial purposes, industrial buildings and buildings of similar design	20	20 to 40	40 to 50	40
Dwellings and buildings of similar design and/or use	5	5 to 15	15 to 20	15
Structures that, because of their sensitivity to vibration, do not correspond to those listed in lines 1 and 2 and are of great intrinsic value (e.g. buildings that are under a preservation order)	3	3 to 8	8 to 10	8

Note 1: For frequencies above 100Hz, at least the values specified in this column shall be applied.

4.3 Construction Traffic Noise Criteria

For existing residences and other sensitive land uses affected by additional traffic on existing roads, the NSW *Road Noise Policy (RNP)* states that for noise associated with increased road traffic generated by land use developments, any increase in the total traffic noise level should be limited to 2 dB during both day and night-time periods. An increase of 2 dB represents a minor impact that is considered barely perceptible to the average person.

5 NOISE AND VIBRATION ASSESSMENT

5.1 Construction Noise Assessment

Sound power levels have been predicted for the construction tasks identified in the project program. The equipment anticipated for use in each task is based on previous project experience. The sound power levels for the equipment likely to be used for each of the listed tasks are provided in Table 11 below.

Table 11 Summary of predicted sound power levels

Tasks	Equipment	Sound Power Levels (dBA re 1pW)	Aggregate Sound Power Level per Task (dBA re 1pW)
Site	Mobile crane	110	113
Establishment Works	Power hand tools	109	_
VVOING	Semi Rigid Vehicle ¹	105	
Ground Works	Excavator	112	119
and Demolition	Hand held jack hammer ¹	111	_
	Dump truck ¹	104	
	Concrete saw 1	114	_
	Skid steer	110	_
	Power hand tools	109	_
Structure	Hand held jack hammer ¹	106	117
	Concrete saw 1	114	_
	Power hand tools	109	_
	Welder	101	_
	Concrete pump truck	110	_
	Concrete agitator truck	108	
Internal Works	Power hand tools	109	109
Common and	Concrete agitator truck	108	117
External Works	Saw cutter ¹	104	_
	Dump truck ¹	104	_
	Concrete saw ¹	114	_
	Power hand tools	109	

Note 1: An assumed time correction has been applied, this being 5 minutes of operation in any 15-minute interval.

5.2 Predicted Construction Noise Levels

Predicted construction noise levels are presented below for each of the surrounding receivers in accordance with the NSW EPA ICNG.

Note:

- Predicted noise levels presented below are given in a range, this includes the expected minimums as well as the maximums.
- With regards to the maximum noise levels in the range, these are typically experienced when plant/works
 are within close proximity to a boundary. In our experience whilst these levels above NML's and considered
 intrusive they will only occur for a short time and is not a representation of noise levels during the entire
 construction period.
- Additionally, As the project will be constructed using modular building systems the expected construction
 noise levels outlined below are going to be limited when compared to a conventional building construction.
 Predicted noise levels provided below are considered a worst-case impact.

Table 12 Receiver 1 – Summary of preliminary predicted construction noise levels – Residence to the west of the site

Phase	Activity	Aggregate Sound Power Level (dBA re 1pW)	Predicted <u>Individual</u> Noise Level at Receiver dBA L _{Aeq 15 minutes}	Predicted Combined Noise Level at Receiver dBA L _{Aeq 15 minutes}	Criteria dBA L _{Aeq 15 minutes}	Summary of Result
Site	Mobile crane	113	57 to 60	61 to 64	<u>Standard</u>	Works indicatively predicted to have

5.3 Construction Traffic Noise Assessment

It is proposed that the construction traffic would access the site via Carlingford Road to the south and Ward Street to the east. All construction traffic will access the site and use the surrounding roadways in accordance with the site Construction Management plan.

5.4 Vibration Assessment

In order to maintain compliance with the human comfort vibration criteria discussed in Section 4.2, it is recommended that the indicative safe distances listed in table below should be maintained. These indicative safe distances should be validated prior to the start of construction works by undertaking measurements of vibration levels generated by construction and demolition equipment to be used on site.

Since the criteria for scientific or medical equipment (should any of these exist close to the site) can be more stringent than those required for human comfort, vibration validating measurements should be conducted at each site to determine the vibration level and potential impact onto this sensitive equipment.

Additionally, any vibration levels should be assessed in accordance with the criteria discussed in Section 4.2.

Table 16 Recommended indicative safe working distances for vibration intensive plant

		Safe Workin	g Distances (m)
Plant	Rating / Description	Cosmetic Damage (BS 7385: Part 2 DIN 4150: Part 3)	Human Comfort (AVTG)
	< 50 kN (Typically 1 – 2 tonnes)	5	15 – 20
	< 100 kN (Typically 2 – 4 tonnes)	6	20
Vibratory roller	< 200 kN (Typically 4 – 6 tonnes)	12	40
	< 300 kN (Typically 7 – 13 tonnes)	15	100
	> 300 kN (Typically more than 13 tonnes)	20	100
Small hydraulic hammer	300 kg, typically 5 – 12 tonnes excavator	2	7
Medium hydraulic hammer	900 kg, typically 12 – 18 tonnes excavator	7	23
Large hydraulic hammer	1600 kg, typically 18 – 34 tonnes excavator	22	73
Vibratory pile driver	Sheet piles	2 – 20	20
Jackhammer	Hand held	1	Avoid contact with structure and steel reinforcements

6 NOISE AND VIBRATION MANAGEMENT PLAN

6.1 Acoustic Management Procedures

Table 17 below summarises the management procedures recommended for airborne noise and vibration impact. These procedures are also further discussed in the report. Hence, where applicable, links to further references are provided in Table 17.

Table 17 Summary of mitigation procedures

Procedure	Abbreviation	Description	Further Reference
General Management Measures	GMM	Introduce best-practice general mitigation measures in the workplace which are aimed at reducing the acoustic impact onto the nearest affected receivers.	Refer to Section 6 For noise impact, also refer to Section 6.2.1 For vibration impact, also refer to Section 6.3.1
Project Notification	PN	Issue project updates to stakeholders, discussing overviews of current and upcoming works. Advanced warning of potential disruptions can be included. Content and length to be determined on a project-	Refer to Section 6
Verification Monitoring	V	by-project basis. Monitoring to comprise attended or unattended acoustic surveys. The purpose of the monitoring is to confirm measured levels are consistent with the predictions in the acoustic assessment, and to verify that the mitigation procedures are appropriate for the affected receivers. If the measured levels are higher than those predicted, then the measures will need to be reviewed and the management plan will need to be amended.	For noise impact, refer to Section 6 and Section 6.2.3. For vibration impact, refer to Section 6.3.2
Complaints Management System	CMS	Implement a management system which includes procedures for receiving and addressing complaints from affected stakeholders	Refer to Section 6.5
Specific Notification	SN	Individual letters or phone calls to notify stakeholders that noise levels are likely to exceed noise objectives. Alternatively, contractor could visit stakeholders individually in order to brief them in regards to the noise impact and the mitigation measures that will be implemented.	Refer to Section 0
Respite Offer	RO	Offer provided to stakeholders subjected to an ongoing impact.	-
Alternative Construction Methodology	AC	Contractor to consider alternative construction options that achieve compliance with relevant criteria. Alternative option to be determined on a case-by-case basis. It is recommended that the selection of the alternative option should also be determined by considering the assessment of on-site measurements (refer to Verification Monitoring above).	-

The application of these procedures is in relation to the exceedances over the relevant criteria. For airborne noise, the criteria are based on NMLs. The allocation of these procedures is discussed in Section 6.1.1

For vibration, the criteria either correspond to human comfort, building damage or scientific and medical equipment. The application of these procedures is discussed in Section 6.1.2.

6.1.1 Allocation of Noise Management Procedures

For residences, the management procedures have been allocated based on noise level exceedances at the affected properties, which occur over the designated NMLs (refer to section 4). The allocation of these procedures is summarised in Table 18 below.

Table 18 Allocation of noise management procedures – residential receivers

Construction Hours	Exceedance over NML (dB)	Management Procedures (see definition above)			
Standard Hours	0 - 3	GMM			
Mon – Fri: 8:00 am to 7:00 pm	4 - 10	GMM, PN, V ¹ , CMS, AC			
Sat: 8:00 am – 5:00 pm	> 10	GMM, PN, V, CMS, SN, AC			
Outside Standard Hours Mon – Fri: 7:00 am to 8:00 am	0 - 10	GMM, AC			
	11 - 20	GMM, PN, V ¹ , CMS, AC			
Sat: 7:00 am to 8:00 am	> 20	GMM, PN, V, CMS, SN, RO, AC			
Notes 1. Verification monitoring to be undertaken upon complaints received from affected receivers					

Please note the following regarding the allocation of these procedures:

- The exceedances have been estimated as part of the acoustic assessment, and these are summarised in Section 5.1.
- The allocation of procedures is based on the assumptions used for noise level predictions (refer to Section 5.1). Consequently, these allocations can be further refined once additional details of the construction program become available.

For non-residential receivers (such as commercial), management measures are provided in Section 6.2.3.

6.1.2 Allocation of Vibration Management Procedures

Table 19 below summarises the vibration management procedures to be adopted based on exceedance scenarios (i.e., whether the exceedance occurs over human comfort criteria, building damage criteria, or criteria for scientific and medical equipment). Please note these management procedures apply for any type of affected receiver (i.e., for residences as well as non-residential receivers).

Table 19 Allocation of vibration management procedures

Construction Hours	Exceedance Scenario	Management Procedures
Standard Hours Mon – Fri: 8:00 am to 7:00 pm	Over human comfort criteria (refer to Section 4.2)	GMM, PN, V, RO
Sat: 8:00 am – 5:00 pm	Over building damage criteria (refer to Section 4.2	GMM, V, AC
Outside Standard Hours Mon – Fri: 7:00 am to 8:00 am	Over human comfort criteria (refer to Section 4.2)	GMM, SN, V, RO, CMS
Sat: 7:00 am to 8:00 am	Over building damage criteria (refer to Section 4.2)	GMM, V, AC

6.2 Site Specific Noise Mitigation Measures

Predicted noise levels outlined in section 5.1 indicate exceedances above the Noise Management Levels (NMLs) as well as the Highly Noise Affected Level (HNAL) when in proximity to a boundary. To militate against any exceedances, the site will need to introduce periods of respite for activities which are creating noise levels above the HNAL only (i.e. greater than 75dBA). See below.

Table 20 Recommended Respite Periods

Monday to Friday	Saturday
7:00am to 8:00am – No noisy works (Respite Period)	8:00am to 9:00am – No noisy works (Respite Period)
8:00am to 11:30am – Works	9:00am to 12:00pm – Works
11:30am to 12:30pm – No noisy works (Respite Period)	12:00pm to 1:00pm – No noisy works (Respite Period)
12:30pm to 3:30pm – Works	
3:30pm to 4:30pm – No noisy works (Respite Period)	_
4:30pm to 6:00pm – Works	-

6.2.1 General Comments

The contractor will, where reasonable and feasible, apply best practice noise mitigation measures. These measures shall include the following:

- Maximising the offset distance between plant items and nearby noise sensitive receivers.
- Preventing noisy plant working simultaneously and adjacent to sensitive receivers.
- Minimising consecutive works in the same site area.
- Orienting equipment away from noise sensitive areas.
- Carrying out loading and unloading away from noise sensitive areas.

In order to minimise noise impacts during the works, the contractor will take all reasonable and feasible measures to mitigate noise effects.

The contractor will also take reasonable steps to control noise from all plant and equipment. Examples of appropriate noise control include efficient silencers and low noise mufflers.

The contractor should apply all feasible and reasonable work practices to meet the NMLs and inform all potentially impacted residents of the nature of works to be carried out, the expected noise levels, duration of noise generating construction works, and the contact details for the proposal.

6.2.2 Noise Monitoring

Noise monitoring, if required, will be performed by an acoustical consultant directly engaged by the contractor.

Noise monitoring is recommended to be undertaken by attended noise measurements at the start of any new phase of works (i.e. demolition, excavation or remediation works etc.). The statistical parameters to be measured should include the following noise descriptors: LAmin, LA90, LA10, LA1, LAmax and LAeq. Unattended noise measurements should be conducted over consecutive 15 minute periods.

This monitoring should also be complemented by undertaking attended noise measurements in order to:

- Differentiate between construction noise sources and other extraneous noise events (such as road traffic and aircraft noise)
- Note and identify any excessive noise emitting machinery or operation.

Noise monitoring and measurements on the site will include the following:

- 1. Noise monitoring during the required demolition to be completed on the site.
- 2. Periodic attended noise measurements during the bulk earthworks to be completed on the site, typically monthly.

In addition to the above detailed noise logging and site surveys, should any complaints be received which have not been determined previously, it should be confirmed by conducting additional attended noise measurements.

The survey methodology and any equipment should comply with the requirements discussed in Standard AS 1055.1-1997.

6.2.3 Noise Mitigation Measures for Non-Residential Receivers

Where exceedances have been identified in Section 5, the following mitigation measures are recommended:

- Undertake general mitigation measures as discussed in Section 6.4
- Issue project updates to tenants in affected premises. The updates can include overview of current and upcoming works, as well as advanced warning of potential disruptions. These updates can also be issued through an email distribution list or via social media.
- Signage to be posted in order to provide stakeholders information regarding project details, emergency contacts and enquiry contact information.

6.2.4 Alternate Equipment or Process

Exceedance of the site's NMLs should result in an investigation as to whether alternate equipment could be used, or a difference process could be undertaken.

In some cases, the investigation may conclude that no possible other equipment can be used, however, a different process could be undertaken.

6.2.5 Acoustic Enclosures/Screening

Typically, on a construction site there are three different types of plant that will be used: mobile plant (i.e., excavators, skid steers, etc.), semi mobile plant (i.e., hand tools generally) or static plant i.e. (diesel generators).

For plant items which are static it is recommended that, in the event exceedances are being measured due to operation of the plant item, an acoustic enclosure/screen is constructed to reduce impacts. These systems can be constructed from Fibre Cement (FC) sheeting or, if airflow is required, acoustic attenuators or louvres.

For semi mobile plant, relocation of plant should be investigated to either be operated in an enclosed space or at locations away from a receiver.

With mobile plant it is generally not possible to treat these sources. However, investigations into the machine itself may result in a reduction of noise (i.e., mufflers/attenuators etc).

6.2.6 Required Piling

Piling on the site will be limited and will not required vibration or percussion piling. All piling should be undertaken during the approved hours of works for the project and the proposed period when piling is to be undertaken is to be included in the community notifications provided to surrounding receivers.

6.3 Vibration Mitigation Measures

6.3.1 General Comments

As part of the CNVMP, the following vibration mitigation measures should be implemented:

- Any vibration generating plant and equipment is to be in areas within the site in order to lower the vibration impacts.
- Investigate the feasibility of rescheduling the hours of operation of major vibration generating plant and equipment.
- Use lower vibration generating items of construction plant and equipment; that is, smaller capacity plant.
- Minimise conducting vibration generating works consecutively in the same area (if applicable).
- Schedule a minimum respite period of at least 30 minutes before activities commence which are to be undertaken for a continuous 4-hour period.
- Use only dampened rock breakers and/or "city" rock breakers to minimise the impacts associated with rock breaking works.
- Conduct attended measurements of vibration generating plant at commencement of works in order to validate
 the indicative safe working distances advised in Table 25 and, consequently, to establish safe working distances
 suitable to the project. Measurements should be conducted at the nearest affected property boundary. These
 safe working distances should be defined by considering the vibration criteria discussed in Section 1.2 (i.e.,
 criteria for structural damage, human comfort and impact to scientific or medical equipment).

6.3.2 Vibration Monitoring

Vibration monitoring will be undertaken at the nearest most affected structures and include the following:

1. Continuous or attended vibration surveys resulting from high vibration generating activities which are within the recommended safe working distances detailed in Table 16 above. Vibration assessments should include continuous vibration logging or attended vibration measurements of proposed activities to be undertaken on the site.

The monitoring location would be on a stiff part of the structure (at the foundation) on the side of the structure adjacent to the subject demolition and construction works.

The vibration monitoring system will be configured to record the peak vibration levels and to trigger an alarm when predetermined vibration thresholds are exceeded. The thresholds correspond to an "Operator Warning Level" and an "Operator Halt Level", where the Warning Level is 75% of the Halt Level. The Halt Level should be determined based on the vibration criteria for building contents and structure (refer to Section 1.2).

Exceedance of the "Operator Warning Level" would not require excavation or demolition work to cease, but rather, alerts the site manager to proceed with caution at a reduced force or load.

An exceedance of the "Operator Halt Level" would require the contractor to implement an alternative excavation technique pending further analysis of the vibration frequency content in order to determine any potential exceedance of the criteria.

The vibration monitoring equipment would be downloaded and analysed by the acoustical consultant.

Reports of the measured vibration levels and their likely impacts would be prepared by the acoustical consultant and issued to the contractor.

6.4 SINSW Complaints management process as outlined in the Community Communication Report (CCR)

6.4.1 Enquiries and complaints management

SINSW manages enquiries, and complaints in a timely and responsive manner and detailed in the Community Consolation Summary report for Epping West Public School and included Appendix C.

Prior to project delivery, a complaint could be related to lack of community consultation, design of the project, lack of project progress, etc.

During project delivery, a complaint is defined as in regard to construction impacts – such as – safety, dust, noise, traffic, congestion, loss of parking, contamination, loss of amenity, hours of work, property damage, property access, service disruption, conduct or behaviour of construction workers, other environmental impacts, unplanned or uncommunicated disruption to the school.

As per our planning approval conditions, a complaints register is updated monthly and is publicly available on the project's website page on the SINSW website. The complaints register will record the number of complaints received, the nature of the complaints and how the complaint was resolved.

6.4.2 Complaints management process

All complaints will be conducted using the SINSW Community Communication Strategy for the Epping West Public School Upgrade, which is included in Appendix D.

Any face to face complaints will be directed to the hotline as detailed in the Community Communication Strategy.

6.4.3 Complaints in common community languages

Complaints can be made in common community languages using the Translating and Interpreting Service (TIS), managed by the Department of Home Affairs. Community members can be connected to an interpreter by calling TIS on 131 450. TIS contact details are included on all project communications. Once TIS has the interpreter on the line, the interpreter and community member are connected to School Infrastructure and phone interpretation can begin. School Infrastructure NSW receives the complaint via the translator and begins the complaints management process as outlined above.

6.4.4 Community Notifications

Prior to the works onsite being undertaken, it is recommended that community consultation with the neighbouring affected parties be undertaken. These include the locations detailed in the figure below.

Figure 3 Required Community Notification Area

Communication notification, should not be limited to the beginning of the onsite works but throughout, providing the community with constant updates on the progress and upcoming works. In our experience these could include:

- Project website.
- Email notifications; and
- Letterbox drops.

6.4.5 Community Engagement

It is proposed that throughout the duration of the project, continued meetings with both the school principals will be undertaken on a regular basis to monitor and mitigate any impacts of construction noise and vibration on the school community.

6.5 Complaints Management System

Should complaints arise they must be dealt with in a responsible and uniform manner, therefore, a management system to deal with complaints is detailed above.

6.6 Contingency Plans

Contingency plans are required to address noise or vibration problems if excessive levels are measured at surrounding sensitive receivers and/or if justified complaints occur. Such plans include:

- Stop the onsite works.
- Identify the source of the main equipment within specific areas of the site which is producing the most construction noise and vibration at the sensitive receivers; and
- Review the identified equipment and determine if an alternate piece of equipment can be used or the process can be altered.
- In the event an alternate piece of equipment or process can be used, works can re-commence.
- In the event an alternate piece of equipment or process cannot be determined implement a construction assessment to be performed by a suitably qualified acoustic consultant.

The Superintendent shall have access to view the Contractor's noise measurement records on request. The Superintendent may undertake noise monitoring if and when required.

6.7 General Mitigation Measures (Australia Standard 2436-2010)

As well as the above project specific noise mitigation controls, AS 2436-2010 "Guide to Noise and Vibration Control on Construction, Demolition and Maintenance Sites" sets out numerous practical recommendations to assist in mitigating construction noise emissions. Examples of strategies that could be implemented on the subject project are listed below, including the typical noise reduction achieved, where applicable.

6.7.1 Adoption of Universal Work Practices

- Regular reinforcement (such as at toolbox talks) of the need to minimise noise and vibration.
- Regular identification of noisy activities and adoption of improvement techniques.
- Avoiding the use of portable radios, public address systems or other methods of site communication that may unnecessarily impact upon nearby sensitive receivers.
- Where possible, avoiding the use of equipment that generates impulsive noise.
- Minimising the need for vehicle reversing for example (particularly at night), by arranging for one-way site traffic routes.
- Use of broadband audible alarms on vehicles and elevating work platforms used on site.
- · Minimising the movement of materials and plant and unnecessary metal-on-metal contact.
- Minimising truck movements.

6.7.2 Plant and Equipment

- Choosing quieter plant and equipment based on the optimal power and size to most efficiently perform the required tasks.
- Selecting plant and equipment with low vibration generation characteristics.
- Operating plant and equipment in the quietest and most efficient manner.

6.7.3 On Site Noise Mitigation

- Maximising the distance between noise activities and noise sensitive land uses.
- Installing purpose-built noise barriers, acoustic sheds and enclosures.

6.7.4 Work Scheduling

- Providing respite periods which could include restricting very noisy activities to time periods that least affect
 the nearby noise sensitive locations, restricting the number of nights that after-hours work is conducted near
 residences or by determining any specific requirements.
- Scheduling work to coincide with non-sensitive periods.
- Planning deliveries and access to the site to occur quietly and efficiently and organising parking only within designated areas located away from the sensitive receivers.
- Optimising the number of deliveries to the site by amalgamating loads where possible and scheduling arrivals within designated hours.
- Including contract conditions that include penalties for non-compliance with reasonable instructions by the principal to minimise noise or arrange suitable scheduling.

6.7.5 Source Noise Control Strategies

Some ways of controlling noise at the source are:

- Where reasonably practical, noisy plant or processes should be replaced by less noisy alternatives.
- Modify existing equipment: Engines and exhausts are typically the dominant noise sources on mobile plant such as cranes, graders, excavators, trucks, etc. In order to minimise noise emissions, residential grade mufflers should be fitted on all mobile plant utilised on site.
- Siting of equipment: locating noisy equipment behind structures that act as barriers, or at the greatest distance from the noise-sensitive area; or orienting the equipment so that noise emissions are directed away from any sensitive areas, to achieve the maximum attenuation of noise.
- Regular and effective maintenance.

6.7.6 Miscellaneous Comments

Deliveries should be undertaken, where possible, during standard construction hours.

Maximise hammer penetration (and reduce blows) by using sharp hammer tips. Keep stocks of sharp profiles at site and monitor the profiles in use.

It is advised that mobile plant and trucks operating on site for a significant portion of the project are to have reversing alarm noise emissions minimised. This is to be implemented subject to recognising the need to maintain occupational safety standards.

No public address system should be used on site (except for emergency purposes).

7 CONCLUSION

This report details the Construction Noise and Vibration Management Sub Plan for the construction of the Epping West Public School project.

An assessment of noise and vibration impacts from the required processes to be undertaken during the construction period of the project (including ground works and construction) has been undertaken and suitable treatments, management controls, perioding measurements and community engagement has been detailed in this report.

Providing the recommendations in this report are included in the construction of the site, compliance with the relevant EPA's *Interim Construction Noise Guideline* and the projects *Consent* will be achieved.

For any additional information please do not hesitate to contact the person below.

Regards

Ben White

Pulse White Noise Acoustics

APPENDIX A: ACOUSTIC GLOSSARY

The following is a brief description of the acoustic terminology used in this report:

Ambient Sound The totally encompassing sound in a given situation at a given time, usually composed of sound from all sources

near and far.

Audible Range The limits of frequency which are audible or heard as sound. The normal ear in young adults detects sound

having frequencies in the region 20 Hz to 20 kHz, although it is possible for some people to detect frequencies

outside these limits.

Character, acoustic The total of the qualities making up the individuality of the noise. The pitch or shape of a sound's frequency

content (spectrum) dictate a sound's character.

Decibel [dB] The level of noise is measured objectively using a Sound Level Meter. The following are examples of the decibel

readings of every day sounds;

0dB the faintest sound we can hear

30dB a quiet library or in a quiet location in the country 45dB typical office space. Ambience in the city at night

60dB Martin Place at lunch time

70dB the sound of a car passing on the street

80dB loud music played at home

90dB the sound of a truck passing on the street

100dB the sound of a rock band

115dB limit of sound permitted in industry

120dB deafening

dB(A) A-weighted decibels The ear is not as effective in hearing low frequency sounds as it is hearing high

frequency sounds. That is, low frequency sounds of the same dB level are not heard as loud as high frequency sounds. The sound level meter replicates the human response of the ear by using an electronic filter which is called the "A" filter. A sound level measured with this filter switched on is denoted as dB(A). Practically all noise is measured using the A filter. The sound pressure level in dB(A) gives a close indication of the subjective

loudness of the noise.

Frequency Frequency is synonymous to *pitch*. Sounds have a pitch which is peculiar to the nature of the sound generator.

For example, the sound of a tiny bell has a high pitch and the sound of a bass drum has a low pitch. Frequency

or pitch can be measured on a scale in units of Hertz or Hz.

Loudness A rise of 10 dB in sound level corresponds approximately to a doubling of subjective loudness. That is, a sound

of 85 dB is twice as loud as a sound of 75 dB which is twice as loud as a sound of 65 dB and so on

LMax The maximum sound pressure level measured over a given period.

LMin The minimum sound pressure level measured over a given period.

L1 The sound pressure level that is exceeded for 1% of the time for which the given sound is measured.

L10 The sound pressure level that is exceeded for 10% of the time for which the given sound is measured.

L90 The level of noise exceeded for 90% of the time. The bottom 10% of the sample is the L₉₀ noise level expressed

in units of dB(A).

Leq The "equivalent noise level" is the summation of noise events and integrated over a selected period of time.

dB (A) 'A' Weighted overall sound pressure level

Sound Pressure Level, LP dB

A measurement obtained directly using a microphone and sound level meter. Sound pressure level varies with distance from a source and with changes to the measuring environment. Sound pressure level equals 20 times the logarithm to the base 10 of the ratio of the rms sound pressure to the reference sound pressure of 20 micro

Pascals.

Sound Power Level,

Lw dB

Sound power level is a measure of the sound energy emitted by a source, does not change with distance, and cannot be directly measured. Sound power level of a machine may vary depending on the actual operating load and is calculated from sound pressure level measurements with appropriate corrections for distance and/or environmental conditions. Sound power levels is equal to 10 times the logarithm to the base 10 of the ratio of the sound power of the source to the reference sound power of 1 picoWatt

APPENDIX B - BEN WHITE CV AND AAS MEMBERSHIP

Curriculum Vitae – Benjamin White

Employment Experience:

Director – Pule White Noise Acoustics Present

Director - White Noise Acoustics:

Director/Engineer - Acoustic Logic Consultancy: July 2018

November 2020 –

March 2019 – Present March 2001 –

Experience:

Ben White the Director of White Noise has over 17 years of experience in acoustic.

Ben has significant experience in providing acoustic services and expert advice in the following areas:

- Residential acoustic reports including aircraft noise (AS2021) assessments, traffic noise, train noise and vibration assessments.
- Noise emission assessments for various projects including assessments with planning requirements using EPA, Department of Planning, Council DCP's and similar regulatory requirements.
- Planning approvals including Development Applications for multi dwelling residential developments, commercial developments, hotels and boarding houses, places of entertainment, carparks, mixed use developments, shopping centres and the like.
- Expert court witness including Land and Environment Court and other expert witness work.
- Project planning and specifications for types of projects including residential, commercial, retail, hotel accommodation, warehouses and industrial developments and mixed-use projects.
- Project delivery for all types of projects including, design advice and project delivery requirements at all stages of projects during design and construction.
- Certification works including on site testing for the provision of certification of all types of projects including items required to comply with Part F5 of the BCA as well as project specific acoustic requirements.
- Mechanical design and advice for the treatments of mechanical services with project requirements.
- External façade design and specification.
- Specialised acoustic design advice including areas of projects.
- Issues with existing building include site surveys and audits as well as advice regarding rectification if required.

1. Introduction

School Infrastructure NSW's (SINSW) mission is to provide school infrastructure solutions by working collaboratively with all stakeholders to create learning environments across NSW that serve future needs and make us proud.

As part of our transformation in the way we plan, develop and deliver schools across the state, we are committed to openly sharing information. This will show how one school compares with its neighbouring group of schools. It also explains the challenges we face in the complex world of schools planning. Part of this transparency means that we will let the community know which schools will be worked on and at what time. It will take time since we have over 2,200 schools across the state, so we will address high growth areas within each district and region across the State first.

As we develop a range of options for addressing school infrastructure requirements, members of the community will be able to see and comment on our proposal before it is finalised. Feedback is important and helps us refine our planning process. Whilst we cannot commit to implementing everything suggested, engaging with the broader community ensures we've considered what's important to you, and balanced this with practicality and cost to deliver sustainable and relevant solutions for schools.

This report summarises the consultation and communication activities that have been undertaken in relation to the proposed Epping West Public School upgrade. It forms part of the Environmental Impact Statement required for the State Significant Development (SSD) application as specified in the Secretary's Environmental Assessment Requirements (SEARs).

This report summarises the engagement undertaken for this stage of the proposed upgrades by outlining:

- the SEARs for stakeholder and community consultation
- the consultation process undertaken, including key meetings with stakeholders
- a summary of feedback received, and issues raised, by specific stakeholders, and
- how feedback has been considered in the development of the SSD application.

2. **Background**

The NSW Government is investing \$7 billion over the next four years, continuing its program to deliver more than 200 new and upgraded schools to support communities across NSW. This is the largest investment in public education infrastructure in the history of NSW.

The NSW Department of Education is committed to delivering new and upgraded schools for communities across NSW. The delivery of these important projects is essential to the future learning needs of our students and supports growth in the local economy.

The Epping West Public School project will increase the capacity for new teaching and learning spaces across the Epping Primary Schools Community Group (SCG) to respond to the projected high population growth in the Epping area. The upgrades will also provide students with more permanent teaching spaces to better facilitate the delivery of modern pedagogies and support improving educational outcomes.

Epping West Public School is located on Carlingford Road, approximately 770m from the proposed site of Epping South Primary School. The site area is approximately 3.0ha, surrounded by detached 1-2 storey residences. The main student drop off zone is along Ward Street as Carlingford Road is a busy dual carriageway. A pedestrian bridge from Ryde Street, opposite the school, provides a safe crossing of Carlingford Road. Epping town centre, the Epping Train Station and Metro Station are located approximately 1.5km to the East along Carlingford Road. 1.56km West along Carlingford Road is Carlingford town centre and highway. To the South are more 1-2 storey detached residences. To the North of the site is the Epping YMCA and Epping West Park facilities, including tennis and soccer pitches. There is also the West Epping Community Centre, West Epping Preschool and the Tanya Brooks Dance Academy immediately adjacent to the North. Nearby schools include Epping Heights Primary School (1.2km NE) Karonga School (800m NW) Carlingford Public School (1.4km SW) and Roselea Public School (1.7km NW).

The nearest secondary public school is Carlingford High School (1.7km NW). To the South the closest public school is Eastwood Public School (2.4km S).

The project will deliver:

- Construction of new buildings which will include new classrooms and administration facility
- Refurbishment and renovation work to existing buildings
- Removal of temporary classroom facilities

2.1. Secretary's Environmental Assessment Requirements

The Secretary's Environmental Assessment Requirements (SEARs) for the State Significant Development were received on 8 October 2020. An excerpt can be found below.

"During the preparation of the EIS, you must consult with the relevant local, State or Commonwealth Government authorities, service providers, community groups, relevant special interest groups, including local Aboriginal land councils and registered Aboriginal stakeholders and affected landowners. In particular, you must consult with:

- the relevant Council
- Government Architect NSW (through the NSW SDRP process)
- Transport for NSW.

Consultation should commence as soon as practicable to inform the scope of investigation and progression of the proposed development. The EIS must describe and evidence the consultation process and the issues raised and identify where the design of the development has been amended in response to these issues. Where amendments have not been made to address an issue, a short explanation should be provided."

3. **Consultation Approach**

3.1. **Consultation objectives**

As set out in the Community Engagement Plan, the following community engagement objectives have been identified for this proposal:

- Promote the benefits of the project
- Build key schools community stakeholder relationships and maintain goodwill with impacted communities
- Manage community expectations and build trust by delivering on our commitments
- Provide timely information to impacted stakeholders, schools and broader communities
- Address and correct misinformation in the public domain
- Reduce the risk of project delays caused by negative third party intervention
- Leave a positive legacy in each community.

3.2. Description of consultation and communication channels and activities

The table below describes the consultation and communication channels and activities that have been undertaken and the strategic intent of each activity.

Activity	Strategic intent
School community engagement (Project Review Group, Meetings, workshops and design user group sessions)	Project Review Group meetings, ad-hoc meetings and workshops comprise representatives from Epping West Public School to discuss aspects of the design, consultation and construction approach and seek feedback and input from members. Design user groups seek input from end users including staff about the proposed design and its applicability.
Communications (Project webpage, Information Pack, Project Updates and Works Notifications)	Publication of project information. A screen print of the project webpage can be found at Appendix 1. A sample Project Update can be found at Appendix 2. A sample Works Notifications can be found at Appendix 3.
Contact channels (Emails and 1300 project information number)	Direct responses to stakeholder and community contact.

3.3. **Consultation activities**

A key factor of the project is the governance provided through the Project Reference Group (PRG), which provides feedback on critical design elements and the overall project direction. PRG meetings commenced on 19 February 2020 and has met on 11 occasions to date. PRG membership comprises of the school leadership team of Epping West Public School, project team members and a Parent and Community (P&C) representative.

Date/s	Targeted stakeholders	Consultation activity	Attendance
	2020		•
-	Educational Design Workshop	Workshop took place in early concept design phase	SINSW and school representatives (including Principal)
19/02/20	PRG Meeting No 0.1 – Provided an overview of the project scope, status, educational rationale workshop and reports.	PRG Meeting	Regular group meeting
18/03/20	PRG Meeting No 0.2 – Discussed program for Business Case completion, service needs, target project scope and planning pathways.	PRG Meeting	Regular group meeting
05/02/20	PRG Meeting No 0.3 – Update provided on consultants engaged to date. Master plan report and options presented to the PRG.	PRG Meeting	Regular group meeting
16/06/20	PRG Meeting No 0.4 – Update provided on consultants engaged since last PRG. Updated plans presented.	PRG Meeting	Regular group meeting
23/07/20	PRG Meeting No 0.5 – Request for SEARs prepared and awaiting approval for submission. Design status presented and design items discussed for upcoming design workshop. New Senior Project Director, Delivery introduced to PRG.	PRG Meeting	Regular group meeting
20/08/20	PRG Meeting No 0.6 - Discussed delays to lodge business case and SEARs request due to the need to redesign concept to meet budget. Revised design proposal to incorporate Admin in the new building, refurbish Building A to 3 classrooms and to remove library from scope was discussed. Removal of toilet block not included in the project scope due to budgetary constraints. New Community Engagement Manager introduced to PRG.	PRG Meeting	Regular group meeting
17/09/20	PRG Meeting No 0.7 - Informed the PRG that the revised concept design with the new Admin and the exclusion of new library from scope has been endorsed. Updated Concept Design presented to the PRG. Aboriginal Heritage Consultant engaged to commence on Aboriginal Cultural Heritage Assessment Report (ACHAR). SEARs request has been lodged with DPIE. PRG notified that Project Manager and Cost Manager engagement for the next phases were in progress.	PRG Meeting	Regular group meeting
15/10/20	PRG Meeting No 0.8 - PRG informed that SEARs response was received. SDRP review session was held and comments on the design will be addressed as part of the SSDA. 	construction commencement. During construction		meetings
	the meetings will be changed to Project Control		
	Group meetings.		

3.4. **Communication actions**

The table below outlines the communication actions undertaken to keep stakeholders and communities informed about this proposal.

Date	Targeted stakeholders	Communication channel and action
	2020	
August 2020	School community, nearby residents	Planning Update
25 November 2020	School community, nearby residents	Works notification
December 2020	School community, nearby residents	Project Update
	2021	
May 2021 – specific	School community and local community	Project Update, Information
date tbc		session, Information Pack,
		Information boards

4. Stakeholder and Community Feedback

Stakeholder and community feedback has been integral to the development of this proposal. Feedback was sought from stakeholders and communities through the consultation activities and communication channels listed in Section 3.

The project team has responded to 4 direct emails about the project.

Incoming queries identified key issues of community interest for consideration during the preparation of the Environmental Impact Statement.

Key issues included:

- Proposed building heights and proximity to existing residents.
- Relationship of project with a new primary school in Epping.
- Construction timeframes.
- Operational considerations for school during construction.
- Design elements of Special Education unit and playground.

4.1. Stakeholder meetings and correspondence

This section outlines a summary of the key consultation undertaken with stakeholders, as defined and required by the SEARs.

Stakeholder	Date/s	Feedback topics	Outcomes
Government Architects – Design Review Session 01	23/09/20	The Project Team's presentation explained the opportunities, constraints and design approaches for the school. SDRP issued advice letter outlining strategies that were supported and with advice and recommendations to be addressed in the ongoing design development of the school. The advice and recommendations focussed on masterplan, landscape, heritage, aboriginal cultural heritage and architecture.	Next meeting scheduled 26 May 2021.
Heritage NSW and RAPs - Aboriginal Heritage Consultation	Various	07/09/2020 - Step 1 - Request for contacts from statutory bodies issued and multiple parties responded. 09/09/2020 - Step 2 - Newspaper Advert printed. 22/09/2020 - Notification of the proposed project and invitation to be consulted issued to all with deadline for registration on 7/10/2020. 08/10/2020 - Copy of contact information for RAPs issued to Heritage NSW and LALC. 08/10/2020 - Proposed assessment methodology was provided to all RAPs for their review and comment. Following the receipt of responses from all RAPs, a record of the agreed outcomes and/or contentious issues was supplied to all RAPs. 11/11/2020 - Field Survey - SINSW engaged a representative from Metro Local Aboriginal Land Council in the site survey. 10/12/2020 - Copies of Draft ACHAR provided to all RAPs for their review and comment.	The correspondence addresses the SEARs requirement to complete Aboriginal Heritage Consultation. Comments from RAPs have been addressed in the ACHAR.
City of Parramatta Council – Flood correspondence	Various	17/11/20 - Initial email issued to Council requesting for comments 04/12/20 - Council responded with initial comments and request for documents 09/12/20 - Flood Analysis report issued to council 23/12/20 - Council requested new link to download report 11/01/21 - Report reissued to Council 15/02/21 - Follow up email to council for comments and a request to issue Council's Map to be included in the FAR. 05/03/21 - Follow up email to council for comments and a request to issue Council's Map to be included in the FAR. 22/03/21 - Follow up email to council for final comments and a request to issue Council's Map to be included in the FAR. 29/03/21 - Council responded confirming that the requested Council Map is no longer relevant.	The correspondence addresses the SEARs requirement to consult with the relevant local authority, however we understand that DPE will refer the development application to City of Parramatta Council for comment as part of the SSDA assessment process.
City of Parramatta Council – Council Meeting 01 (Ecology)	30/11/20	Meeting was held with Ecology Consultant, SI, Johnstaff (PM) and the City of Parramatta Council to discuss ecology related issues on the project and received positive feedback from the council.	Feedback topics taken forward to next meeting. Feedback is also referenced in the BDAR.
City of Parramatta Council – Traffic and Transport Council Meeting 01	02/12/20	Project Team provided overview of site traffic and transport issues. Discussed council proposed works planned for the area.	Feedback topics taken forward to next meeting.

City of Parramatta	03/02/21	Introduction to both parties and Epping West Public School project.	Feedback topics taken forward to next

5. **Project response**

The feedback received during consultation has been considered in the preparation of the Environmental Impact Statement. The table below provides a detailed summary of the key issues that emerged and the corresponding project response.

Key issues	Project response	Relevant report
Transport for NSW (TfNSW) and Roads and Maritime Services (RMS) both issued comments for inclusion in the SEARs for the proposed development, and these requirements have been addressed.	Transport Working Group meetings were held with the Council and representatives from TfNSW and RMS to discuss the proposed development and receive feedback on any relevant matters that required consideration prior to finalising the project. The Traffic and Transport Assessment prepared by SCT was discussed and road safety around the school was also discussed.	Traffic Impact Assessment Report
Sydney Water has issued comments for inclusion in the SEARs for the proposed development.	These requirements have been addressed.	Stormwater Management Plan, Sustainable Development Report
Heritage NSW has issued comments for inclusion in the SEARs for the proposed development.	These requirements have been addressed.	Heritage Impact Assessment Report
EPA NSW has issued comments for inclusion in the SEARs for the proposed development.	These requirements have been addressed.	Noise and Vibration Impact Assessment Report, Hazardous Materials Survey, PSI, DSI and RAP, Preliminary Waste Management Plan.
EESG has issued comments for inclusion in the SEARs for the proposed development.	These requirements have been addressed.	BDAR Waiver, Flood Assessment Report, Stormwater Management Plan, PSI, ASSMP and Salinity MP letters.
The local member is briefed on the project and the project status.	The local member is supportive of the development and proposed facilities.	N/A.

6. **Next Steps**

In preparing the SSD application for the Epping West Public School upgrade, the project team has met the consultation requirements prescribed by the SEARs.

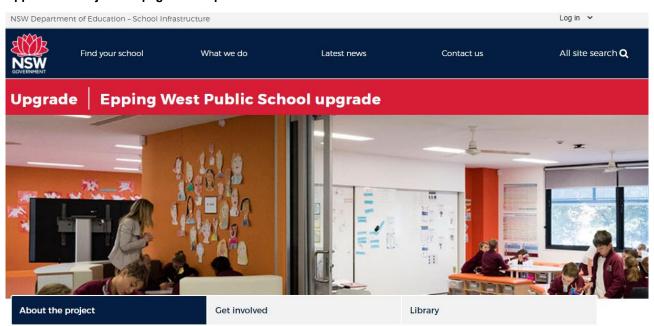

School Infrastructure NSW has demonstrated in this report the extent of engagement made with stakeholders to date. All of the designs and studies lodged with the SSDA have incorporated the feedback received to date. This engagement will continue through design development with ongoing feedback being incorporated into the designs.

Continued engagement will take place with stakeholders and communities during the statutory exhibition of the SSDA, as well as during future stages of the planning and development process.

School Infrastructure NSW will continue to update the project webpage and produce updates at key project stages for stakeholders and communities.

Appendices

Appendix 1: Project webpage screen print

We are in the process of designing an upgrade to Epping West

The current project proposal is to provide permanent and upgraded learning spaces and core facilities to support the student and staff community.

More information about the upgraded school facilities will be shared as the project develops.

The benefits

- An upgrade to existing facilities.
- New flexible learning spaces.
- Expanded staff and administration areas.

Timeline

Appendix 2: Project Update example

NSW Department of Education - School Infrastructure

Investing in our schools

The NSW Government is investing \$7 billion over the next four years, continuing its program to deliver more than 200 new and upgraded schools to support communities across NSW. This is the largest investment in public education infrastructure in the history of NSW.

The NSW Department of Education is committed to delivering new and upgraded schools for communities across NSW. The delivery of these important projects is essential to the future learning needs of our students and supports growth in the local economy.

Epping West Public School

We are planning an upgrade at Epping West Public School to to provide upgraded facilities for the school community. It is proposed to deliver new flexible learning spaces and expanded staff and administration areas.

A new primary school in Epping

Planning for the new primary school in Epping is underway. Proposed works involve the establishment. of a new primary school at the former TAFE NSW campus on Chelmsford Avenue, to meet future enralment growth. It is proposed to deliver new flexible learning spaces as well as a range of core

NSW Department of Education - School Infrastructure

Epping West Public School

Works notification

25 November 2020

We are committed to delivering an upgrade at Epping West Public School to provide upgraded facilities for the school community. It is proposed to deliver new flexible learning spaces and expanded staff and administration areas.

Upcoming investigation works

As part of planning for this project, we need to undertake some investigative works around the school site. These investigations will include:

- Traffic surveys to monitor traffic flow
- Soil investigations using small excavators

Working hours

The investigative work will take place between Monday 30 November 2020 and Friday 29 January

The traffic survey equipment will be installed between 8:00pm and 4:00am on roads surrounding the school site.

The soil investigation will take place between 7:00am and 5:00pm within the school grounds.

There will be no work taking place on Sundays, public holidays, or between Christmas and New

Keeping you updated

We are here to make sure that work is completed safely and efficiently and we will minimise impacts on the community at every opportunity. Thank you for your patience while we deliver this important school infrastructure.

4.	Project Governance	14
5.	Stakeholders	16
6.	Engagement Approach	18
7.	Engagement Delivery Timeline	23
8.	Protocols	24

Document Purpose

This Community Communication Strategy (CCS) has been developed to:

Successfully consider and manage stakeholder and community expectations as integral to the successful delivery of the project.

Outline interfaces with other disciplines, including safety, construction, design and environment, to ensure all activities are co-ordinated and drive best practice project outcomes.

Inform affected stakeholders, such as the local community or road users about construction activities.

Provide a delivery strategy which enables the open and proactive management of issues and communications.

Highlight supporting procedures and tools to enable the team to deliver this plan effectively.

Provide support for the broader communications objectives of School Infrastructure NSW (SINSW), including the promotion of the project and its benefits.

This Community Consultation Strategy (CCS) will be implemented through the design and construction phase of the project, and for 12 months following construction completion.

The CCS will be revised regularly to address any changes in the project management process, comments and feedback by relevant stakeholders, and any changes identified as a result of continuous improvement undertakings. This will be done in close consultation with the SINSW Senior Project Director, appointed Project Management Company and/or Contractor and SINSW Community Engagement Manager.

The CCS is reviewed and approved by the SINSW Senior Project Director, in close consultation with Schools Operations and Performance, with final endorsement from the SINSW Community Engagement Senior Manager before being submitted to the Planning Secretary for approval.

Table 1: List of SSD requirements and where they are addressed

State Significant Developments B7	The Community Communications Strategy addresses this in section
B7 (a) Identify people to be consulted during the design and construction phase	Section 4 Section 5
B7 (b) - Set out procedures and mechanisms for the regular distribution of accessible information about or relevant to the development	Section 6 Section 7 Section 8.4
B7 (c) - Provide for the formation of community-based forums, if required, that focus on key environmental management issues for the development	Section 4
B7 (di) - Set out procedures and mechanisms: Through which the community can discuss or provide feedback to the Applicant	Section 4, PRG Section 6 Section 8.5
B7 (dii) - Set out procedures and mechanisms: Through which the Applicant will respond to enquiries or feedback from the community; and	Section 8.5
B7 (diii) - Set out procedures and mechanisms: To resolve any issues and mediate any disputes that may arise in relation to construction and operation of the development, including disputes regarding rectification or compensation	Section 8.5

1. Context

The NSW Government is investing \$7.9 billion over the next four years, continuing its program to deliver 215 new and upgraded schools to support communities across NSW. This is the largest investment in public education infrastructure in the history of NSW.

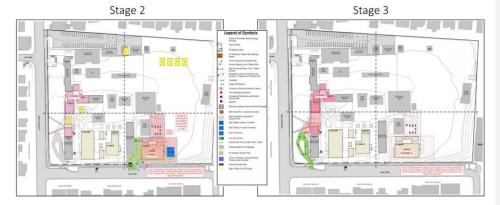

We are designing an upgrade at Epping West Public School to provide upgraded facilities for the school community

The proposed development can be described as alterations and additions to an existing educational establishment. In summary, the proposed works will include:

- Demolition works;
- Construction of a three (3) storey building in the south-eastern corner of the site and a two (2) storey building further north adjacent to the site's eastern boundary;
- Refurbishment and renovation works to existing buildings, with a small addition to the western side of an existing building;
- Removal of demountable buildings currently located predominantly on the northern part of the site and associated make good works to reinstate the oval and play space which is predominantly on the northern part of the site.

An existing building known as Building G (located between buildings F and H) is proposed to be demolished, Building G is a single storey classroom building. The project is expected to be delivered in stages, see diagrams below for detail (please note staging is tentative only and is subject to change):

Stage 1 - Site Layout Plan

The Epping West Public School upgrade is classified as a state significant development, and has been assessed by the Department of Planning, Industry and Environment (DPIE). Consent was provided on date TBC.

DPIE's web page on the project is here.

Commented [AD1]: Would it be sufficient to add the date draft conditions were provided here?

Commented [DS2R1]: No probably not. We can let you know the minute the consent is provided. At least the report will be reviewed and approved in that time.

2. Community Engagement Objectives

SINSW's mission is to provide school infrastructure solutions by working collaboratively with all our stakeholders to create learning environments across NSW that serve our future needs and make us all proud.

This CCS has been developed to achieve the following community engagement objectives:

- Promote the benefits of the project
- Build key school community stakeholder relationships and maintain goodwill with impacted communities
- Manage community expectations and build trust by delivering on our commitments
- Provide timely information to impacted stakeholders, schools and broader communities
- Address and correct misinformation in the public domain
- Reduce the risk of project delays caused by negative third party intervention
- Leave a positive legacy in each community.

3. Key Messages

Through each phase of the project, the key messages and means of engagement will be regularly reviewed, refined and updated. Information that is currently in the public domain is outlined below.

3.1. High level messaging

The NSW Government is investing \$7.9 billion over the next four years, continuing its program to deliver 215 new and upgraded schools to support communities across NSW. This is the largest investment in public education infrastructure in the history of NSW.

3.2. Project messaging

3.2.1. Project status

The State Significant Development Application has been assessed by the Department of Planning, Industry & Environment and consent has been granted.

3.2.2. Project benefits

We are designing an upgrade at Epping West Public School to provide upgraded facilities for the school community. It is proposed to deliver new flexible learning spaces and expanded staff and administration areas. The project will deliver:

- Construction of new buildings which will include new classrooms, student amenities and core student facilities
- The main new building will also include a new administration and staff area
- · Refurbishment and renovaton work to existing buildings
- · Removal of temporary demountable buildings

3.2.3. High-quality learning environment

The project will provide flexible learning spaces that make use of the latest technology to enhance the learning experience for the next generation of students. Furthermore, the contemporary and sustainable facilities provide an outstanding working environment for school staff.

Flexible learning spaces are adaptable to accommodate small or large groups and facilitate students use of modern technology, while working independently and collaboratively.

3.2.4. Environmental benefits

The new school will be built in accordance with current sustainability principles. School Infrastructure NSW is committed to environmentally conscious construction and maintenance practices.

3.3. Construction phase

3.3.1. Safety

School Infrastructure NSW is committed to ensuring that work is completed safely and efficiently and with minimal impact to the local community. Prior to construction starting, any hazardous material is required to be removed from the site. This work will be carried out in accordance with regulatory requirements including the provisions of SafeWork NSW.

3.3.2. Traffic management

The construction contractor will develop a Traffic Management Plan to ensure that vehicle movements are managed with minimal disruption to the local community. All construction vehicles (excluding worker vehicles) are to be contained wholly within the site, except if located in an approved on-street work zone, and vehicles must enter the site before stopping.

3.3.3. Noise, vibration and dust

Any activity that could exceed approved construction noise management levels will be managed in strict accordance with the Protection of the Environment Operations Act 1997.

Mitigation measures will be in place to manage noise and dust levels, including hoarding to minimise the effects of noise and dust and hosing down as required to ensure the safety of the school and local community.

Construction works, including the delivery of materials to and from the site, will take place between 7am and 6pm Monday to Friday and between 8am and 1pm on Saturdays. No night work is scheduled for this project and no work will occur on Sundays or public holidays, unless required to complete certain works and as approved by Council.

Rock breaking, rock hammering, sheet piling, pile driving and similar activities may only be carried out between the following hours:

- (a) 9am to 12pm, Monday to Friday;
- (b) 2pm to 5pm, Monday to Friday; and
- (c) 9am to 12pm, Saturday.

Activities may be undertaken outside of these hours if required:

- (a) by the Police or a public authority for the delivery of vehicles, plant or materials; or
- (b) in an emergency to avoid the loss of life, damage to property or to prevent environmental harm; or
- (c) where the works are inaudible at the nearest sensitive receivers; or
- (d) where a variation is approved in advance in writing by the Planning Secretary or his nominee if appropriate justification is provided for the works.

Notification of such activities must be given to affected residents before undertaking the activities or as soon as is practical afterwards.

3.3.4. Flora and fauna

School Infrastructure NSW is committed to ensuring construction work has a minimal impact upon flora and fauna.

School Infrastructure NSW will comply with all Development Consent Conditions relating to the protection of flora and fauna, and will comply with all relevant mitigation measures listed in the Environmental Impact Statement (EIS).

Prior to construction, a Construction Environmental Management Plan (CEMP) will be prepared to govern the completion of all construction works. The CEMP will detail measures to be taken for the protection and management of flora and fauna (including native fauna), will be prepared in accordance with relevant guidelines and performance indicators, and will be prepared to the satisfaction of the Department of Planning, Industry and Environment (DPIE).

The CEMP will be managed throughout the construction by the Head Contractor. The Head Contactor will ensure areas of native fauna are preserved through fencing and signage accordingly to avoid any damage and any conservation measures currently in place will be maintained.

The Head Contractor will also minimise the spread of weeds and grasses. This may include covering long-term stockpiles and bare areas with shade cloth or revegetating to minimise the establishment of weeds. Land clearing shall be minimal and staged to reduce the total area of cleared land at one time.

Trees will not be trimmed or removed without appropriate statutory approval. A qualified and experienced arborist will complete all vegetation removal and trimming.

All trees on site that are not approved for removal will be protected in accordance with AS 4970-2009 – Protection of Trees on Development Sites.

3.3.5. Soil and water

School Infrastructure NSW is committed to the appropriate management of soil and water on the construction site.

School Infrastructure NSW will comply with all Development Consent Conditions relating to soil and water management, and will comply with all relevant mitigation measures listed in the Environmental Impact Statement (EIS).

Prior to construction, a Construction Environmental Management Plan (CEMP) will be prepared to govern the completion of all construction works. The CEMP will detail measures for the management of soil and water, will be prepared in accordance with relevant guidelines and performance indicators, and will be prepared to the satisfaction of the Department of Planning, Industry and Environment (DPIE).

A suitably qualified and experienced consultant will prepare a Construction Soil and Water Management Sub-Plan (CSWMSP), which will form part of the CEMP. The CSWMSP will:

- describe erosion and sediment control measures to be implemented during construction
- provide a plan of how construction works will be managed in wet-weather events

- detail flows from the site to surrounding area
- describe the measures to be taken to manage stormwater and flood flows for small and large sized events

Erosion and sediment controls will be installed and maintained in accordance with the "Blue Book" – *Managing Urban Stormwater: Soils and Construction (4th edition)*. These controls will be implemented prior to the commencement of any other site disturbance works. A Stormwater Management Plan will be prepared by the Head Contractor and will generally outline the controls that will be implemented to manage sediment and erosion during construction. Any discharges from the site will be strictly controlled to ensure hazardous materials and contaminants are contained in accordance with the requirements of all relevant Authorities and guidance.

The site will be continually cleaned of rubble to minimise possible sediment flow during rainfall periods. Stormwater kerbs and drainage lines will be fitted with silt barriers (or the like) to slow run-off and reduce erosion/discharge from the site. Silt barriers will be replaced when 30% of their capacity has been reached and other control equipment will be inspected and maintained, particularly during heavy rainfall periods, and replaced when no longer effective.

Stormwater grate inlets surrounding the site will be covered with geotextile fabric to allow water to enter into drains whilst retaining sediments.

A rainwater harvesting system will be installed onsite and used on-site during construction. Approval will be obtained prior to the discharge of onsite stormwater to Council's stormwater drainage system or street gutter.

Only approved soil and fill types will be used onsite. Accurate records will be kept on the volume and type of fill used onsite.

All long-term soil stockpiles will be protected from wind and water erosion by coverage with anchored shade cloth or vegetation as well as being fitted with silt barriers (where appropriate). Sediment and leachate control measures must be incorporated for any stockpiled material to prevent sediment entering the stormwater system or from migrating off-site. Control measures will be established to prevent surface water run-off entering and leaving excavations and stockpile areas.

Control measures may include:

- temporary bunding or diversion drains:
- impermeable sheeting placed under and/or over stockpiles;
- silt fences/silt socks to surround stockpiles; and
- protection of existing drains with silt barriers/fencing.

These mitigation measures will be regularly inspected to ensure that they are in good condition and if necessary upgraded where their performance is deteriorating.

3.3.6. Contamination

Prior to construction, a Construction Environmental Management Plan (CEMP) will be prepared to govern the completion of all construction works. The CEMP will detail contamination management measures, will be prepared in accordance with relevant guidelines and performance indicators, and will be prepared to the satisfaction of the Department of Planning, Industry and Environment (DPIE).

The project site has been tested for contamination and is considered to be safe and suitable for the school upgrade.

An environmental assessment of the site was undertaken in 2020 and identified localised contamination in some fill material. Consultants commented that the immediate risk to human receptors is considered to be relatively low. However, site workers could come into contact with the contamination during the development works. Site remediation was recommended to minimise any risk to site workers.

Based on the findings of the assessment, consultants were of the opinion that the site could be made suitable provided the following recommendations are implemented:

- Preparing a Remediation Action Plan (RAP) to manage the contamination identified; and
- Preparing a Validation Assessment report to demonstrate the completion of remediation works.

In accordance with the recommendations above, a Remediation Action Plan has been prepared to be implemented during the construction phase of works. Consultants are of the opinion that the site can be made suitable for the proposed development provided this RAP is implemented accordingly. A site validation report and long-term

environmental management plan (if required) should be prepared on completion of remediation activities and should be submitted to the consent authority.

With the implementation of the proposed recommendations, the site can be made suitable for the proposed development having regard to the potential for contamination of the land.

If soil is encountered during the works which appears to be potentially contaminated and appears to be different from the soils otherwise encountered to date, or point sources of contamination such as buried drums or wastewater interceptors are encountered, the following procedures will apply:

- Any suspicious material/soil which has been excavated will be stockpiled on bunded, strong, impermeable
 plastic sheeting, protected from erosion and all seepage retained (divided into domains or stockpiles
 representing similar material types);
- Excavation works at that part of the site where the suspicious material (soil, asbestos containing material or physical find) was encountered will cease until an inspection is carried out by an appropriately qualified environmental consultant or its representative;
- Based on visual inspection, the environmental consultant will provide interim advice on construction health and safety, soil storage and soil disposal to allow other activities to proceed if possible; and
- Based on sampling and analysis of the material, the environmental consultant will provide advice based on a comparison of the laboratory test results to appropriate criteria relating to human health, potential environmental impacts and waste disposal.

In the context of the above, "suspicious" material would include, but is not limited to, oily materials or materials with unusual odours, drums, metal or plastic chemical containers, buried solid waste, ash, slag, coke or brightly coloured material etc. Asbestos at the site would need to be managed through the implementation of an Asbestos Management Plan. Upon discovery of any suspected asbestos containing material (ACM) at the site, an Asbestos Management Plan will be implemented with the following actions to be taken immediately:

- stop all activities that may disturb the materials;
- inform the site operator of the discovery;
- suspend work until it has been determined whether the material in question contains asbestos; and
- physically quarantine the area with a signed barrier stating "Danger Asbestos".

The CEMP will include protocols for the management of unexpected contamination discovered during the course of construction works.

3.3.7. Visual amenity

Prior to construction, a Construction Environmental Management Plan (CEMP) will be prepared to govern the completion of all construction works. The plan will detail measures to maintain visual amenity, will be prepared in accordance with relevant guidelines and performance indicators, and will be prepared to the satisfaction of the Department of Planning, Industry and Environment (DPIE).

The CEMP will include provisions for the management of outdoor lighting. The installation and operation of outdoor lighting will comply with both AS 4282-2019 – Control of the Obtrusive Effects of Outdoor Lighting and AS 1158.3.1-2005 – Lighting for Roads and Public Spaces – Part 3.1: Pedestrian Area (Category P) Lighting.

It is noted that the existing school has mitigation measures in place and is sympathetic to the place character of the visual catchment. It is not considered necessary to implement further mitigation strategies and measures to reduce visual impact. Through construction, fully enclosed scaffolding will be a requirement for all new building elements along with façade elements requiring refurbishment, exact scope and timing will be further resolves as façade details finalise.

During the installation of structure and façade when in extreme close proximity to the site boundary additional controls may need to be in place. Activities such a crane rotation lockout, additional spotters, materials tethering etc.

The Contractor will attach a continuously printed shade-cloth banner to the external face of all boundary site fencing with graphics. The shade cloth will feature the latest NSW Government logo in accordance with the latest NSW Government Brand Guidelines and shall not include other company logos e.g. Contractor, project manager. The Contractor will ensure that:

- Shade cloth width suits site fence and is a minimum of 1.8m;
- design of site fence takes into account any additional wind loading due to the shade cloth:

- banner signage terminates a minimum of 1.0 m from adjoining neighbouring boundaries; and
- Site entry gates are left clear.

The Contractor is to remove the shadecloth and signs on Completion of the Works.

3.3.8. Heritage

Prior to construction, a Construction Environmental Management Plan (CEMP) will be prepared to govern the completion of all construction works. The plan will detail measures to protect heritage matters, will be prepared in accordance with relevant guidelines and performance indicators, and will be prepared to the satisfaction of the Department of Planning, Industry and Environment (DPIE).

The CEMP will include unexpected finds protocols for objects of Aboriginal or Historic heritage.

A Heritage Impact Assessment and an Aboriginal Cultural Heritage Assessment Report has been prepared by consultants and provides an assessment of the heritage and aboriginal archaeological potential for the site.

The school is listed as a heritage item on the Hornsby Local Environmental Plan 2013 (HLEP 2013) as item 365 'Epping West Public School—original building dated 1927 (excluding other buildings and grounds)'. The main building (Building A) is also included as an item on the Department of Education's Section 170 Heritage and Conservation Register as item 5064440, 'Epping West Public School—Building B00A'. The concept design proposes internal alteration to Building A in order to meet the EFSG requirements for educational facilities. Although the original section Building A was constructed in 1927, it has undergone several phases of extension and addition over the last nine decades. The proposed internal alterations, including the reconfiguration of internal walls, is limited to the late 1960s section of the building. Some areas of modification have also previously been undertaken in these areas of the building. The proposed works would alter the room layout in a modified addition to Building A. These works would not impact on the significant and/or original fabric of Building A, nor would it alter the external appearance of Building A and its position in the school campus. The proposed works would have a neutral heritage impact.

Demolition of Building G would have a moderate impact on Heritage at the site, although Building G is not listed as a heritage item. To help minimise or mitigate the heritage impacts of the project, the following actions will be implemented during detailed design and construction methodology development. These recommendations build on those identified in the Heritage Assessment report and heritage advice previously provided for the project:

- Heritage advice should be provided during the design development process to minimise heritage impacts through sensitive design of the proposed building massing.
- Opportunities to reduce the potential for visual impact arising from the construction of the new Building 1 should be explored in the detailed design phase.
- A revised heritage impact statement should be prepared for the detailed design and include a summary of the mitigation measures implemented during the design development process.
- A photographic archival recording should be prepared for the demolished items within the school grounds. This should be prepared in accordance with the Heritage NSW (former OEH) guidelines.
- A heritage interpretation plan should be developed and implemented as part of the project to help the school users and local community understand the significance of the site.

The site has been assessed as having areas of moderate to high potential for historical archaeological remains of local heritage significance. As the proposed development of the Epping West Public School site is currently in Concept Stage the full extent and nature of impacts to areas of historical archaeological potential is not fully identifiable based on the information available in the concept design. A revised assessment of impacts will be prepared for the detailed design and construction documentation prior to the commencement of works. This document would be able to inform of any additional assessment, report preparation or investigations requirements.

Impacts to areas of locally significant historical archaeological remains are likely to require either monitoring, testing or salvage investigations prior to the commencement of works. The extent of these requirements would be informed by the conditions of consent for the approved SSDA as well as the revised archaeological impact assessment prepared for the detailed design and construction methodology.

Consultants have assessed the aboriginal archaeological potential of the site to be nil-low and any evidence remaining on the site would not be of local or state significance. It is therefore considered unlikely that the development will disturb any areas of cultural or aboriginal heritage. In the event that a heritage or archaeological item is discovered during the course of the works, works onsite will cease and the Office of Environment and Heritage will be contacted. The area will be isolated until advice is sought from a qualified Heritage Consultant prior to work recommencing.

3.3.9. Disruptive works

Construction work for the Epping West Public School Upgrade is underway. The following activities are planned for the upcoming weeks (*works will be outlined*). You can contact us directly using the details below to discuss any aspect of this work.

3.3.10. Get involved

We are committed to working together with our school communities and other stakeholders to deliver the best possible learning facilities for students. Your feedback is important to us. For more information contact us via the details below.

Email: schoolinfrastructure@det.nsw.edu.au

Website: schoolinfrastructure.nsw.gov.au

Phone: 1300 482 651

3.4. Handover phase

3.4.1. Traffic and access

Construction work on the Epping West Public School upgrade has been completed. We are now in a position to confirm access provisions for the new school, including pick-up and drop-off arrangements.

3.5. Official school opening

An upgrade to Epping West Public School was completed today, and delivered brand new facilities including classrooms, student amenities and facilities.

Thank you for your patience during construction and we are thrilled to deliver this project for the school community.

4. Project Governance

4.1. Project Reference Group

The Department's engagement process strives to engage with key stakeholders from the school community. As part of this process, a Project Reference Group (PRG) is established early in the project with nominated representatives from the school community to ensure input from, and consultation with, impacted stakeholders.

The PRG provides key information from an operational, educational, change and logistics perspective into the planning, through the design phase of the project. The PRG will end after the completion of the project design.

The PRG will receive project briefings and key progress updates on project progress to support its responsibilities in assisting to communicate updates to school staff, parents and stakeholders in the wider local community.

The Project Reference Group will be conducted as two separate groups during the development and delivery of all projects:

(a) Project Reference Group - Planning

A nominated group (limited to 10) will participate in workshops to develop the Educational Principles and Education Rationale which will inform the Functional Design Brief. These workshops are chaired by the SINSW Senior Project Director (or delegate) and may be facilitated by an Education Consultant. This activity will inform the development of the building design.

(b) Project Reference Group - Design

The purpose of the group is to seek input and inform design processes and provide operational requirements and information to help minimise the impact of the project on school operations. These workshops are chaired by the Senior Project Director (or delegate) and may be facilitated by the appointed architectural consultant, as required. The PRG will provide key information from an operational and logistics perspective to assist project delivery.

Specifically to communications and engagement related matters, the PRG will also:

Provide a forum for discussion and exchange of information relating to the planning and delivery of the project

Identify local issues and concerns to assist the project team with the development of mitigation strategies – to manage and minimise construction and environmental impacts to the school community and local residents

Provide feedback to the communications and community engagement team on key messages and communications and engagement strategies

Provide advice on school engagement activities

Assist to disseminate communications to the school community and other stakeholders.

As per all department led delivery projects, the PRG acts as a consultative forum and not a decision-making forum for the planning and delivery of this school infrastructure.

Figure 1: Project Reference Group (PRG)

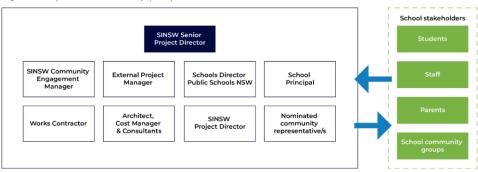

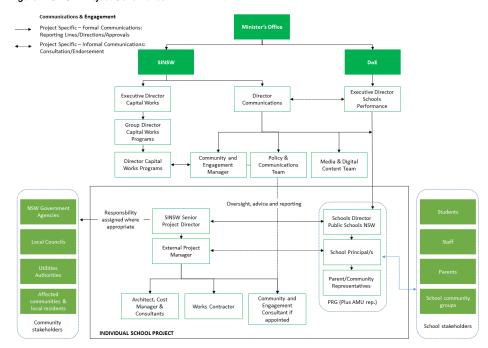

Figure 2 below maps how the department and SINSW will communicate both internally and externally.

Figure 2: SINSW Project Governance

5. Stakeholders

The stakeholder list below summarises who will be consulted during the design and construction phase via ongoing face to face meetings, communications collateral and digital engagement methods.

Table 2: Stakeholders

Local Members of Parliament: Federal – Member for Bennalong (John Alexander, Liberal) State – Member for Epping (Dominic Perrottet, Liberal) Government agencies and peak bodies: Transport for NSW Roads and Maritime Services NSW Fire and Rescue NSW NSW Department of Education NSW Department of Planning, Industry and Environment NSW Environmental Protection Authority NSW Rural Fire Service Sydney Water NSW Heritage Council NSW Office of Environment and Heritage	Meeting the economic, social and environmental objectives of state and federal governments Delivering increased public education capacity on time Delivering infrastructure which meets expectations Addressing local issues such as traffic, congestion and public transport solutions Traffic and congestion on the local road system Adequate public transport options and access Ensuring new infrastructure meets standard requirements for safety and fire evacuation Ensuring the development is compliant Ensuring the development does not impact heritage items
Transport for NSW Roads and Maritime Services NSW Fire and Rescue NSW NSW Department of Education NSW Department of Planning, Industry and Environment NSW Environmental Protection Authority NSW Rural Fire Service Sydney Water NSW Heritage Council	Adequate public transport options and access Ensuring new infrastructure meets standard requirements for safety and fire evacuation Ensuring the development is compliant
NSW Department of Premier and Cabinet	Easing overcrowding in local schools
Local Council – City of Parramatta Councillors Bureaucrats Mayor General Manager	Schedule for construction and opening of school Plans for enrolled students during the operation of the temporary school Impacts to the local community including noise, congestion and traffic Shared use of community spaces Providing amenities to meet increase population density
School community Principal Teachers Staff Parents and carers Students Future parents within the new intake area Local community – Epping West and surrounding	Safe pedestrian and traffic access to the temporary school during construction Construction impacts and how these will be minimised Quality of infrastructure and resources upon project completion How to access the new school once completed

Stakeholders	Interest and involvement
	Increased traffic and congestion on nearby streets
	Local traffic and pedestrian safety
	Changed traffic conditions during pick-up and drop-off
	Shared use of school facilities and amenities
Nearby public schools	Impact on school resources
Epping Heights Primary School	Impact on current students
Karonga School	Implications for teaching staff
Carlingford Public School	Possible impacts on enrolments
Roselea Public School	Opportunities to view the new facilities
Eastwood Public School	
A new primary school in Epping	
Adjoining affected landowners and businesses	Noise and truck movements during construction
Epping YMCA	Increased traffic and congestion on nearby streets
Epping West Park facilities, including tennis and	Local traffic and pedestrian safety
soccer pitches	Changed traffic conditions during pick-up and drop-off
West Epping Community Centre	Shared use of school facilities and amenities
West Epping Preschool	Environmental impacts during construction
Tanya Brooks Dance Academy	

6. Engagement Approach

The key consideration in delivering successful outcomes for this project is to make it as easy as possible for anyone with an interest to find out what is going on. In practice, the communications approach across all levels of engagement will involve:

- Using uncomplicated language
- Taking an energetic approach to engagement
- Encouraging and educating whenever necessary
- Engaging broadly including with individuals and groups that fall into harder to reach categories
- Providing a range of opportunities and methods for engagement
- Being transparent
- Explaining the objectives and outcomes of planning and engagement processes.
- In addition to engagement with Government Departments and Agencies and Council, two distinct streams of engagement will continue for the project as follows:
- School community for existing schools being upgraded, or surrounding schools for new schools, and
- Broader local community.

This allows:

- School-centric involvement from school communities (including students, parents/caregivers, teachers, admin staff) unencumbered by broader community issues, and
- Broad community involvement unencumbered by school community wants and needs. Broad community stakeholders include local residents, neighbours and local action groups.

6.1. General community input

Members of the general public impacted by the construction phase are able to enquire and complain about environmental impacts via the following channels:

- Information booths and information sessions (including Virtual Information Sessions) held at the school or local
 community meeting place, and advertised at least 7 days before in local newspapers, on our website and via
 letterbox drops
- 1300 number that is published on all communications material, including project site signage
- School Infrastructure NSW email address that is published on all communications material, including project site signage

Refer to Section 8.5 of this document for detail on our enquiries and complaints process.

A number of tools and techniques will be used to keep stakeholders and the local community involved as summarised in table 3 below.

For reference, project high level milestones during the delivery phase include:

- Site establishment/early works
- Commencement of main works construction
- Term prior to project completion
- Project completion
- First day of school following project completion
- Official opening

Table 3: School Infrastructure NSW Communications Tools

Communications Tool	Description of Activity	Frequency
1300 community information line		
Advertising (print)	Advertising in local newspapers is undertaken with at least 7 days' notice of significant construction activities, major disruptions and opportunities to meet the project team or find out more at a face to face event.	At project milestones or periods of disruption
Call centre scripts	High level, project overview information provided to external organisations who may receive telephone calls enquiring about the project, most namely stakeholder councils.	Throughout the project when specific events occur or issues are raised by stakeholders
Community contact cards	These are business card size with all the SINSW contact information. The project team/ contractors are instructed to hand out contact cards to stakeholders and community members enquiring about the project. Cards are offered to school administration offices as appropriate. Directs all enquiries, comments and complaints through to our 1300 number and School Infrastruture NSW email address.	Throughout the life of the project and available 12 months post completion
CRM database	All projects are created in SINSW's Customer Relationship Management system – Darzin - at project inception. Interactions, decisions and feedback from stakeholders are captured, and monthly reports generated. Any enquiries and complaints are to be raised in the CRM and immediately notified to the Senior Project Director, Project Director and Community Engagement Manager.	Throughout the life of the project and updated for 12 months post completion
Display boards	A0 size full colour information boards to use at info sessions or to be permanently displayed in appropriate places (school admin office for example).	As required
Door knocks	Provide timely notification to nearby residents of upcoming construction works, changes to pedestrian movements, temporary bus stops, expected impacts and proposed mitigation. Provide written information of construction activity and contact details.	
Face-to-face meetings/briefings	Activities include meeting, briefings and "walking the site" to engage directly with key stakeholders, directly impacted residents and business owners and the wider community.	As required

Communications Tool	Description of Activity	Frequency
FAQs	Set of internally approved answers provided in response to frequently asked questions. Used as part of relevant stakeholder and community communication tools. These are updated as required, and included on the website if appropriate.	Throughout the life of the project
Information booths	Information booths are held locally and staffed by a project team member to answer any questions, concerns or complaints on the project.	At project milestones and as required
	Info booths are scheduled from the early stages of project delivery through to project completion.	
	Information booths are to be held both at the school/ neighbouring school, as well for the broad community:	
	School information booths are held at school locations at times that suit parents and caregivers, with frequency to be aligned with project milestones and as required.	
	Community information booths are usually held at local shopping centres, community centres and places that are easily accessed by the community. They are held at convenient times, such as out of work hours on weekdays and Saturday's.	
	Collateral to be provided include community contact cards, latest project notification or update, with internal FAQs prepared.	
	All liaison to be summarised and loaded in the CRM.	
	Notice of at least 7 days to be provided.	
Information sessions (drop in, includes Virtual Information sessions)	Information sessions are a bigger event than an info booth, held at a key milestone or contentious period. We have more information on the project available on display boards/ screens and an information pack handout – including project scope, planning approvals, any impacts on the school community or residents, project timeline, FAQs.	As required
	SINSW can also host these Information Sessions online hosted via the project webpage as a 'Virtual Information Session'.	
	Members from the project and communications team will be available to answer questions about the project.	
	In person, these events occur after school hours on a week day (from 3pm – 7pm to cover working parents).	
	All liaison summarised and loaded on the CRM.	
Information pack	A 4 page A4 colour, fold out flyer that can include: Project scope	As required
	Project update	
	FAQs	
	Contact information	

Communications Tool	Description of Activity	Frequency
	Project timeline	
	To be distributed at info sessions or at other bigger events/ milestones in hard copy and also made available electronically.	
Media releases/events	Media releases are distributed upon media milestones. They promote major project milestones and activities and generate broader community awareness.	
Newsletters	Available in hard copy and electronic format. A monthly or quarterly newsletter providing updated information on project scope, benefits, construction progress, achievement of project milestones and other project related issues of interest. Similar to an info pack in content, but used as a regular high level update for the community.	As required, related to high level project milestones
Notifications	A4, single or double sided, printed in colour that can include FAQs if required Notifications are distributed under varying templates with different headings to suit different purposes: Works notification are used to communicate specific information/ impacts about a project to a more targeted section of the community. This template doesn't have an image so it can be more appropriately targeted for matters like hazardous material. Project update is used when communicating milestones and higher level information to the wider community i.e. project announcement, concept design/DA lodgement, construction award, completion. Always includes the project summary, information booths/ sessions if scheduled, progress summary and contact info.	As required according to the construction program. Distibuted via letterbox drop to local residents and via the school community at least 5-7 days prior to construction activities or other milestones throughout the life of the project. Specific timings indicated in table 5 – Section 8.
Photography, time-lapse photography and videography	Captures progress of construction works and chronicles particular construction activities. Images to be used in notifications, newsletters and report, on the website and Social Media channels, at information sessions and in presentations.	Project completion (actual photography and video of completed project)

Communications Tool	Description of Activity	Frequency
	Once the project is complete, SINSW will organise photography of external and internal spaces to be used for a range of communications purposes.	
Presentations	Details project information for presentations to stakeholder and community groups.	As required
Priority correspondence	Ministerial (and other) correspondence that is subject to strict response timeframes. Includes correspondence to the Premier, Minister, SINSW and other key stakeholders. SINSW is responsible for drafting responses as requested within the required timeframes.	As required
Project Reference Group	SINSW facilitated Project Reference Group sessions providing information on the design solution, construction activities, project timeframes, key issues and communication and engagement strategies.	Meets every month or as required More information on the PRG is detailed in Section 4
Project signage	A0 sized, durable aluminium signage has been installed at Epping West Public School. Provides high level information including project scope, project image and SINSW contact information. Fixed to external fencing/ entrances etc. that are visible and is updated if any damage occurs.	Throughout the life of the project and installed for 12 months post completion
Site visits	Demonstrate project works and progress and facilitate a maintained level of interest in the project. Includes media visits to promote the reporting of construction progress.	As required
School Infrastructure NSW email address	Provide stakeholders and the community an email address linking direct to the Community Engagement team. Email address (schoolinfrastructure@det.nsw.edu.au) is published on all communications materials.	Throughout the life of the project
School Infrastructure NSW website	A dedicated project page for Epping West Public School is located on the SINSW website - https://www.schoolinfrastructure.nsw.gov.au/projects/e/eppingwest-public-school-upgrade.html.	Updated at least monthly and is live for at least 12 months post completion of the project
Welcome pack/ thank you pack		

7. Engagement Delivery Timeline

The following engagement delivery timeline maps tailored communications tools and activities by key milestone.

Table 4: Engagement timeline

Project Phase / milestone	Target Audiences	Proposed communication tools / activities / purpose as per Table 3	Timing / implementation
Main Construction works, including but not limited to: Remediation Works commenced Key impact periods – noise, dust, traffic, vibration	Local community and neighbours School community	Sod turn Webpage update Media release (if required) Project Update or Information Pack Information Session (TBC) Works notifications	Late 2021 (at key construction events as required, as per our notification process in Table 5)
Term prior to project completion	Local community and neighbours School community	Webpage update Media telease (if required) Project Update or Information Pack Information Session (TBC) Works notification (including summer holiday works notification)	Late 2021 to early 2023
Handover and welcome to new school	Local community and neighbours School community	Webpage update Media telease (if required) Welcome Pack (including photography) Welcome Signs / Maps Information Session (TBC) Works notification	Early 2023
Opening	Local community and neighbours School community	Official opening ceremony	January 2023
Post-opening	All	Website remains live Project signage remains installed 1300 phone and email still active, and CRM still maintained for complaints and enquiries.	Early 2024 (at least 12 months post construction completion)

8. Protocols

8.1. Media engagement

SINSW manages all media relations activities, and is responsible for:

Responding to all media enquiries and instigating all proactive media contact.

Media interviews and delegation to SINSW media spokespeople who are authorised to speak to the media on behalf of the project

Informing the Minister's Office and SINSW project team members and communications representatives of all media relations activities in advance and providing the opportunity to participate in events where possible.

8.2. Site visits

SINSW in partnership with Schools Operations and Performance organises and hosts guided project site tours and media briefings as required by the Minister's Office. The Project Team will ensure the required visitor site inductions are undertaken and that all required Personal Protective Equipment (PPE) is worn.

For media site visits and events, SINSW creates, or contributes to, the production of an event pack. This will include an event brief, media release, speaking notes and Q&As.

8.3. Social, online and digital media

SINSW initiates and maintains all social and online media channels. These channels can include Facebook, Twitter, LinkedIn and the website. The SINSW Online Content Team upload to the SINSW website.

8.4. Notification process

Notifications (titled works notifications or project updates as per Table 3) are SINSW's prescribed notification requirement and are the primary mechanism to inform the community and key stakeholders about the impact of school construction on the local area. Notifications provide advance warning of activities and planned disruptions, as per the notice periods in Table 5 below, allowing stakeholders and community members to plan for the impacts and make alternative arrangements where required. Notifications are distributed in person via door knocks, via letterbox drop, via the school and electronically via email.

The C&E Manager advises the project team of the relevant notification requirements and timeframes to be met. The team obtains the information necessary to meet these timeframes by:

Having oversight of the project delivery program

Visiting site as required

Attending and participating in construction meetings, planning meetings, and Risk and Opportunity workshops.

Table 5: Notifications periods

Works activity	Minimum community notification period
Notification to communities following major incident	Same day
Emergency works/unforeseen events	Same day
Contamination management and notification	Within 48 hours
Upcoming works notification (minimum disruption)	5- 7 days
Invitation/notification of community event (e.g. info booth)	5 – 7 days
Notifications regarding traffic changes, parking impacts, road closures, major detours	10 – 14 days
Pedestrian route changes and other impacts	10 – 14 days

Works activity	Minimum community notification period
Notifications regarding operational changes for the school community (school drop-off points, entry and exit points)	10 - 14 days
Major construction impacts (out of hours/ significant noise/ demolition)	10 – 14 days
Major impacts to school community e.g. relocation to temporary school	6 months

8.5. Enquiries and complaints management

SINSW manages enquiries (called interactions in our CRM, Darzin), and complaints in a timely and responsive manner.

Prior to project delivery, a complaint could be related to lack of community consultation, design of the project, lack of project progress, etc.

During project delivery, a complaint is defined as in regards to construction impacts – *such as* – safety, dust, noise, traffic, congestion, loss of parking, contamination, loss of amenity, hours of work, property damage, property access, service disruption, conduct or behaviour of construction workers, other environmental impacts, unplanned or uncommunicated disruption to the school.

If a phone call, email or face- to- face complaint is received during construction, they must be logged in our CRM, actively managed, closed out and resolved by SINSW within 24-48 hours.

As per our planning approval conditions, a complaints register is updated monthly and is publicly available on the project's website page on the SINSW website.

If the complainant is not satisfied with SINSW response, and they approach SINSW for rectification, the process will involve a secondary review of their complaint as per the outlined process.

Complaints will be escalated when:

An activity generates three complaints within a 24-hour period (separate complainants).

Any construction site receives three different complaints within a 24-hour period.

A single complainant reports three or more complaints within a three day period.

A complainant threatens to escalate their issue to the media or government representative.

The complaint was avoidable

The complaint relates to a compliance matter.

Complaints will be first escalated to the Senior Manager, Community and Engagement or Director of Communications for SINSW as the designated complaints handling management representatives for our projects. Further escalation will be made to the Executive Director, Office of the Chief Executive to mediate if required.

If a complaint still cannot be resolved by SINSW to the satisfaction of the complainant, we will advise them to contact the NSW Ombudsman - https://www.ombo.nsw.gov.au/complaints.

The below table summarises timeframes for responding to enquiries and complaints, through each correspondence method:

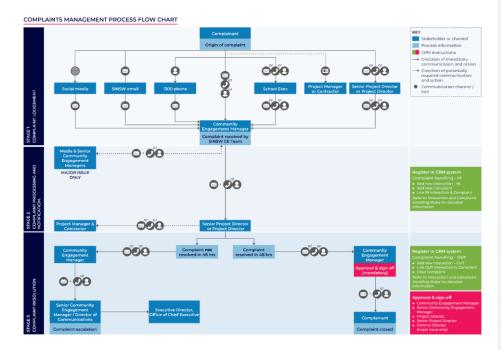

Table 6: Complaint and enquiry response time

Complaint	Acknowledgement times	Response times
Phone call during business hours	At time of call – and agree with caller estimated timeframe for resolution.	Complaint to be closed out within 48 hours. If not possible, continue contact, escalate as required and resolve within 7 business days.
Phone call after hours*	Within two (2) hours of receiving message upon returning to office.	Following acknowledgement, complaint to be closed out within 48 hours. If not possible, continue contact,

Complaint	Acknowledgement times	Response times
		escalate as required and resolve within 7 business days.
Email during business hours	At time of email (automatic response)	Complaint to be closed out within 48 hours. If not possible, continue contact, escalate internally as required and resolve within 7 business days.
Email outside of business hours	At time of email (automatic response)	Complaint to be closed out within 48 hours (once return to business hours). If not possible, continue contact, escalate internally as required and resolve within 7 business days.
Interaction/ Enquiry		
Phone call during business hours	At time of call – and agree with caller estimated timeframe for response.	Interaction to be logged and closed out within 7 business days.
Phone call after hours	Within two (2) hours of receiving message upon returning to office.	Interaction to be logged and closed out within 7 business days.
Email during business hours	At time of email (automatic response)	Interaction to be logged and closed out within 7 business days.
Email outside of business hours	At time of email (automatic response)	Interaction to be logged and closed out within 7 business days.
Letter	N/A	Interaction to be logged and closed out within 10 business days following receipt.

The below diagram outlines our internal process for managing complaints.

Figure 3 - Internal Complaints Process

8.5.1. Disputes involving compensation and rectification

School Infrastructure NSW is committed to working with the school and broader community to address concerns as they arise. Where disputes arise that involve compensation or rectification, the process for resolving community enquiries and complaints will be followed to investigate the dispute. Depending upon the results of the investigation, School Infrastructure NSW may seek legal advice before proceeding.

8.6. Incident management

An incident is an occurrence or set of circumstances that causes or threatens to cause material harm and which may or may not be or cause a non-compliance. Material harm is harm that:

- (a) involves actual or potential harm to the health or safety of human beings or to the environment that is not trivial; or
- (b) results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000, (such loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment).

8.6.1. Roles and responsibilities following an incident

In the event of an incident, once emergency services are contacted, the incident must be immediately reported to the SINSW Senior Project Director who will inform:

SINSW Executive Director

SINSW C&E Manager

SINSW Senior Manager, C&E

SINSW Communications Director

SINSW Communications Director will:

Lead and manage all communications with the Minister's office in the event of an incident, with assistance as required

Direct all communications with media to the SINSW Media Manager in the first instance for management

Notify all other key project stakeholders of an incident.

The school and local community will be notified within 24 hours in the event of an incident, as per our notification timelines in Table 5.

The SINSW Senior Project Director will issue a written incident notification to Department of Planning, Industry & Environment (DPIE) (compliance@planning.nsw.gov.au) and Local Council immediately following the incident to set out the location and nature of the incident.

This must be followed within seven days following the incident of a written notification to the Department of Planning, Industry and Environment (compliance@planning.nsw.gov.au) that:

- (a) identifies the development and application number;
- (b) provides details of the incident (date, time, location, a brief description of what occurred and why it is classified as an incident):
- (c) identifies how the incident was detected;
- (d) identifies when SINSW became aware of the incident;
- (e) identify any actual or potential non-compliance with conditions of consent;
- (f) describes what immediate steps were taken in relation to the incident;
- (g) identifies further action(s) that will be taken in relation to the incident; and
- (h) provides the contact information for further communication regarding the incident (the Senior Project Director).

Within 30 days of the date on which the incident occurred or as otherwise agreed to by the Planning Secretary, SINSW will provide the Planning Secretary and any relevant public authorities (as determined by the Planning Secretary) with a detailed report on the incident addressing all requirements below:

- (a) a summary of the incident;
- (b) outcomes of an incident investigation, including identification of the cause of the incident;
- (c) details of the corrective and preventative actions that have been, or will be, implemented to address the incident and prevent recurrence; and
- (d) details of any communication with other stakeholders regarding the incident.

8.7. Reporting process

Throughout the project, data will be recorded on participation levels both face to face and online, a record of engagement tools and activities carried out in addition to queries received and feedback against emerging themes.

Stakeholder and community sentiment will be evaluated throughout to ensure effectiveness of the engagement strategy and to inform future activities.

Reporting will include but not be limited to:

Stakeholder engagement reporting – numbers of forums, participation levels and a summary of the outcomes Community sentiment reporting – outputs of all community engagement activities, including numbers in attendance at events, participation levels and feedback received against broad themes

Online activity - through the project website and via social media

Media monitoring – as part of the proactive media campaign

Engagement risk register - to be updated regularly.

Epping West Public SchoolWorks notification

14 September 2021

A project is underway to upgrade Epping West Public School. The project will deliver new classrooms and an administration facility, refurbishment and renovation work to existing buildings and removal of temporary classroom facilities.

Demolition

Early work is underway to install and relocate temporary classrooms. Demolition work will also now start on Building G. This work will involve site establishment and mobilisation, work on services (such as power, communications and water), site clearance and demolition of Building G. Building G is located to the east of the site near Ward Street.

Demolition work is expected to start in the school holidays, from Monday 20 September 2021 and take approximately 4 weeks. The contractor will establish a new site access point for this work on Ward Street.

For any families using Out of Hours Care during the school holidays, please continue to use the left Gate 4 from West Epping Park to access these facilities.

Asbestos removal

The demolition work will require working with asbestos containing material. Testing conducted by an independent hygienist has confirmed that the material is bonded asbestos, which means it is attached to other material such as cement or vinyl and cannot be crumbled by light pressure.

The area will be remediated in accordance with the Department of Education's Asbestos Management Plan and SafeWork NSW regulations. All work will be completed by licensed and accredited asbestos contractors, and monitored by occupational hygienists in strict accordance with all applicable legislation, regulations, policies and guidelines.

The material is scheduled to be removed as part of the Building G demolition during the school holidays. All asbestos containing material will be removed outside of school hours.

Testing will be completed to ensure the area has been fully remediated. The school will receive a clearance certificate to confirm the area is safe to occupy. We will keep you informed if further material is found which requires removal.

Please be assured that the removal of this material will not pose a risk to the local community. Thank you for your cooperation during this important work.

Working hours

Work will take place between the following times:

- Monday to Friday, 7am to 6pm
- Saturdays, 8am to 1pm.

For more information contact:

School Infrastructure NSW Email: schoolinfrastructure@det.nsw.edu.au Phone: 1300 482 651 www.schoolinfrastructure.nsw.gov.au

Project Update - Managing construction impacts

A Project Update was recently distributed to the Epping West Public School community regarding plans for us to effectively manage construction impacts. Your feedback is important to us on how these impacts are managed.

Please be advised there was a minor error in the Project Update which you received.

Construction works, including the delivery of materials to and from the site, are proposed to take place between 7:00am and 6:00pm Mondays to Fridays and between 8:00am and 1:00pm on Saturdays. No work is currently proposed for Sundays or public holidays. We may also carry out work where noise levels that do not exceed the existing background noise level plus 5dB between 6:00am and 7:00pm Monday to Friday and between 1:00pm and 4:00pm Saturdays.

Thank you for your understanding. Please provide your feedback on the above mitigation, or any others listed in the Project Update by Friday 17 September 2021 via email at schoolinfrastructure@det.nsw.edu.au or phone 1300 482 651. The full update is available on the project webpage: https://www.schoolinfrastructure.nsw.gov.au/projects/e/epping-west-public-school-upgrade.html.

1. Introduction

ptc. has been engaged by Hansen Yuncken to prepare a Construction Soil and Water Management Sub Plan for Epping West Public School Alterations and Additions ("Site") located at 96-104 Carlingford Road, Epping NSW 2121. This report has been prepared to address the SSDA Conditions for the Proposed Development (Refer to Section 1.4)

The location of the site is illustrated in Figure 1.

Figure 1 – Site Location of Epping West Public School

1.1 Site Locality

The Site is located on the northern side of Carlingford Road and the corner of Ward Street, currently occupied by the existing school campus.

The Site currently lies within the City of Parramatta (CoP) Local Government Area (LGA), which was formerly part of the Hornsby Shire Council (HSC) LGA.

1.2 Development Proposal

The proposed development is alterations and additions to an existing educational establishment. In summary, the proposed works will include:

- Demolition works;
- Construction of a three (3) storey building in the south-eastern corner of the site and a two (2) storey building further north adjacent to the site's eastern boundary;
- Refurbishment and renovation works to existing buildings, with a small addition to the western side of an existing building;
- · Removal of demountable buildings currently located predominantly on the northern part of the site and

associated make good works to reinstate the oval and play space which is predominantly on the northern part of the site.

An existing building known as Building G (located between buildings F and H) is proposed to be demolished, Building G is a single storey classroom building.

The proposed Site plan is shown below.

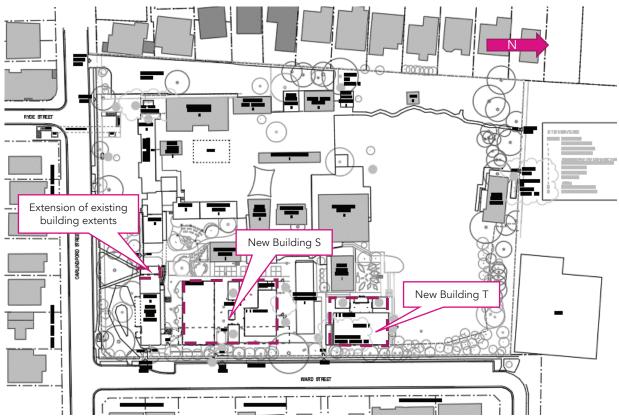

Figure 2 – Architectural plan

1.3 Design Standards, Policies and Guidelines

The following design standards, policies and guidelines are referenced to ensure relevant stormwater design and management requirements are met:

- Hornsby Shire Council (HSC) Local Environmental Plan (LEP) 2013;
- Hornsby Shire Council (HSC) Development Control Plan (DCP) 2013;
- Hornsby Shire Council (HSC) Water Sensitive Urban Design (WSUD) Reference Guidelines 2015;
- Hornsby Shire Council (HSC) Development Design Specification 0074 Stormwater Drainage (Design) 2016;
- Landcom Managing Urban Stormwater Soils and Construction 2004;
- Australian Rainfall and Runoff A guide to Flood Estimation 2016;
- Sydney Water On-site stormwater detention policy 2020;
- NSW Department of Education (DoE) Educational Facilities Standards and Guidelines (EFSG); and
- Guidelines for developments adjoining land managed by the Office of Environment and Heritage 2013.

1.4 Compliance with Conditions of Consent

A summary of the relevant requirements of the SSDA conditions of consent are provided below for clarity.

Condition B12

Prior to the commencement of construction, the Applicant must submit a Construction Environmental Management Plan (CEMP) to the Certifier and provide a copy to the Planning Secretary for information. The CEMP must include, but not be limited to, the following:

(f) Construction Soil and Water Management Sub-Plan (see condition B16);

This report

Condition B16

The Applicant must prepare a Construction Soil and Water Management Sub-Plan (CSWMSP) and the plan must address, but not be limited to the following:

(a) Be prepared by a suitably qualified expert, in consultation with Council;

Refer to Document Control Sheet

(b) Measures to ensure that sediment and other materials are not tracked onto the roadway by vehicles leaving the site;

Refer to Sediment and Erosion Control Plans (Attachment 1)

(c) Describe all erosion and sediment controls to be implemented during construction, including as a minimum, measures in accordance with the publication Managing Urban Stormwater: Soils & Construction (4th edition, Landcom 2004) commonly referred to as the 'Blue Book';

Refer to Sediment and Erosion Control Plans (Attachment 1)

(d) Provide a plan of how all construction works will be managed in a wet-weather events (i.e. storage of equipment, stabilisation of the Site);

Refer to Sediment and Erosion Control Plans (Attachment 1)

(e) Detail all off-site flows from the site; and

Refer to Section 2.4

(f) Describe the measures that must be implemented to manage stormwater and flood flows for small and large sized events, including, but not limited to 1 in 5-year ARI.

Refer to Section 2.4

2. Construction Soil and Water Management

2.1 Water Quality

Landcom Managing Urban Stormwater – Soils and Construction 2004 contains erosion, sediment and waste control measures are required to mitigate the impacts of land disturbance activities on soils, landforms and receiving waters; including:

- Reduce pollution to downstream areas and receiving waters;
- Reduce land degradation;
- Raise an awareness of ecologically sustainable development (ESD) principles and their application to the development.

2.2 Flood Impact Assessment

A Flood Analysis Report has been prepared by Site Plus Pty Ltd dated April 2021 to address the requirements of the NSW Floodplain Development Manual 2005 and Hornsby Shire Council DCP 2013 flooding requirements. It was noted that the Site is not affected by mainstream flooding or significant overland flow, and thus there are no anticipated impacts of the development in relation to flood risks on-site or off-site.

In light of the above, diversion bunds and sediment fences will ensure that the flows from upstream areas are diverted around the construction site. Construction site grading will direct disturbed area flows to sediment control measures.

2.3 Erosion and Sediment Control Plan

An Erosion and Sediment Control Plan (ESCP) has been prepared in accordance with Landcom Managing Urban Stormwater – Soils and Construction 2004, included in **Error! Reference source not found.**. The ESCP details the following control measures during construction to ensure large portions of sediments are contained to prevent runoff:

- Sediment diverting measures to minimise sediment in Council's stormwater drainage networks (i.e. sandbags and/or geo-textile filter fabric protecting existing and proposed drainage pits);
- Overland flow;
- Indicative temporary stockpile locations;
- · Sediment control fencing location & extents; and
- Covering and revegetating disturbed areas (as soon as practicable & as required to prevent sediment laden runoff from leaving the site).

It is noted that site foreman is to monitor weather forecast, and when high chance of rain is forecasted, cover stockpiles and locate machinery/equipment in areas to prevent sediment laden runoff from leaving the site.

2.4 Off-site flow management

All off-site flows from the site will be contained by straw bale mini sediment basin traps for each new building. It is anticipated for flows up to the 1 in 5-year ARI critical storm event be contained within the mini sediment

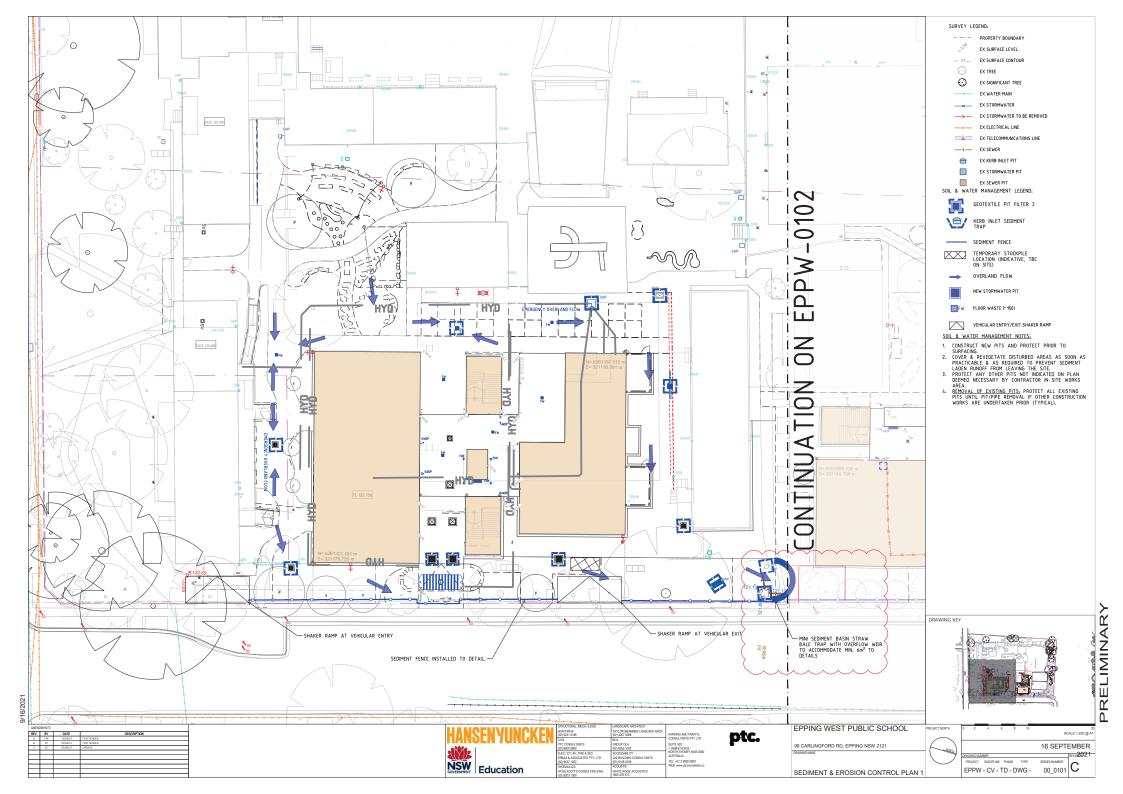

basin (contaminated water), and larger storm events up to the 1 in 20-year ARI critical and 1 in 100-year ARI critical storm events will overtop the straw bale via a weir configuration (as clean runoff, via a grass swale and sediment fence / filter fabric).

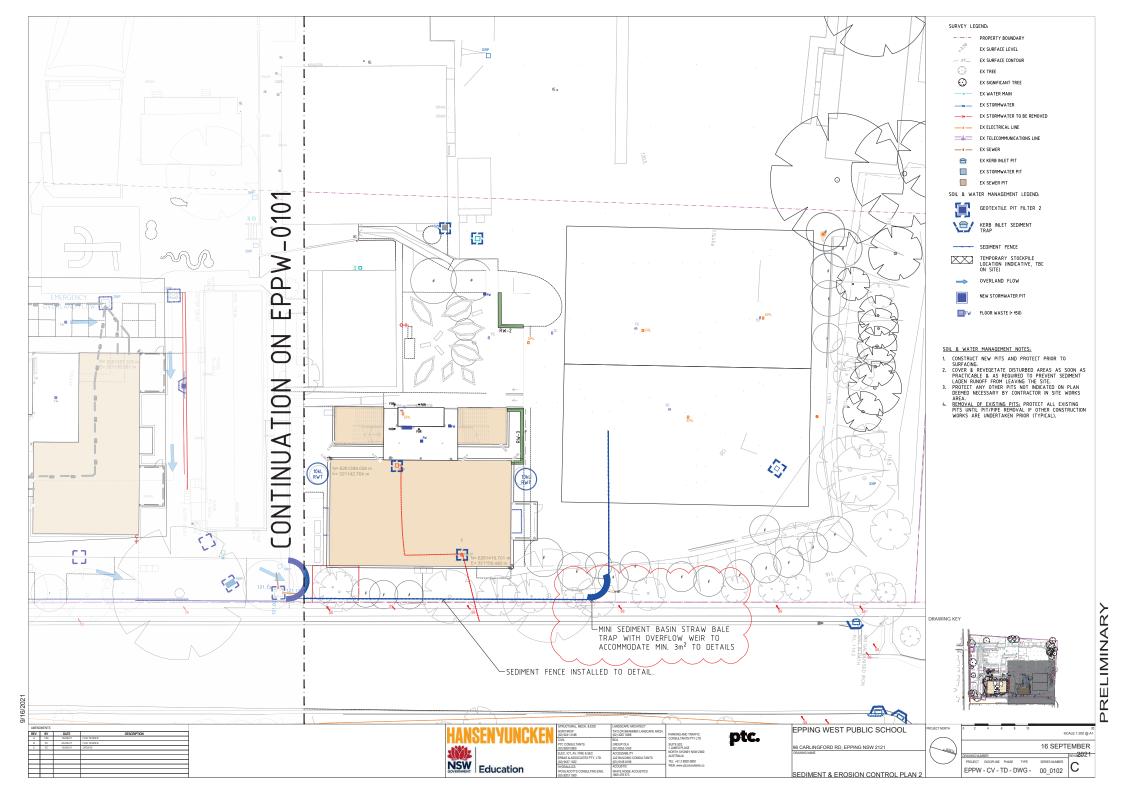

As such, the mini temporary straw bale sediment basin illustrated on the Sediment and Erosion Control Plans for Buildings S and T are to accommodate minimum volumes of approximately 6m³ and 3m³ (runoff from upstream disturbed areas) respectively (based on 1 in 5-year ARI 10 minute storm event containing peak flows of 47L/s and 10L/s, respectively).

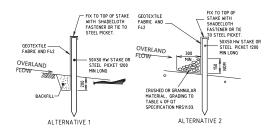

Once disturbed area is reduced, straw bale mini sediment basin is to be managed as required and clean runoff from completed/stabilised areas is to be directed downstream of sediment measures.

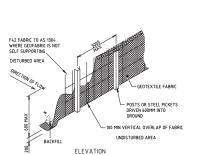

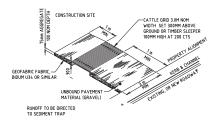

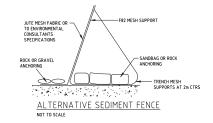

SEDIMENT FENCE NOT TO SCALE

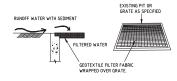

TEMPORARY CONSTRUCTION VEHICLE ENTRY/EXIT SEDIMENT TRAP (SHAKER RAMP) NOT TO SCALE

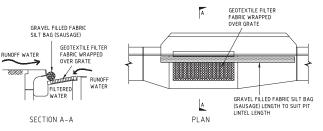

ALTERNATIVE SEDIMENT FENCE NOTES

- THE LEADING EDGE OF THE JUTE MESH. THE ANCHORING SHOULD BE SUFFICIENTLY LARGE TO ENSURE STABILITY OF THE STRUCTURE IN THE DESIGN STORM EVENT, USUALLY THE 10 YEAR EVENT.

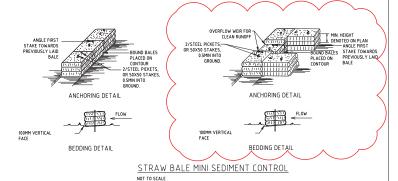

GEOTEXTILE PIT FILTER 2

NOT TO SCALE

KERB INLET SEDIMENT TRAP NOT TO SCALE

- SEDIMENT FENCES WILL BE INSTALLED AS SHOWN AND ELSEWHERE AT THE DISCRETION OF THE SITE MANAGER TO CONTAIN COARSE SEDIMENT FRACTIONS (INCLUDING AGGREGATED FINES) AS NEAR AS POSSIBLE TO THER SOURCE.
- THEIR SOURCE.
 SEDIMENT REMOVED FROM ANY TRAPPING DEVICE WILL BE RELOCATED WHERE FURTHER POLLUTION TO DOWNSLOPE LANDS & WATERWAYS CANNOT OCCUR.
- STOCKPILES WILL BE PLACED WHERE SHOWN IN DRAWING OR ELSEWHERE AT THE DISCRETION OF THE SITE MANAGER AND NOT WITHIN 5m OF HAZARD AREAS INCLUDING LIKELY AREAS OF HIGH VELOCITY FLOWS SUCH
- STOCKPILES WILL BE PLACED WHERE SHOWN IN DRAWING OR LESSWHERE AT THE DISCRETION OF THE SITE MANAGER AND NOT WITHIN SO IN THE ARCAD AREAS INCLUDING LIRELY AREAS OF HIGH VELOCITY FLOWS AS WATERWAYS, PAVIO AREAS SO BROWWAYS.

 WATER WILL BE PREVENTED FIOR DIRECTLY ENTERING THE PERMANENT DRAWING STATEMENT OF THE SIZE DETAILS JULIES SITE IN EACH SIZE OF THE ARCAD ARCAD

SOIL & WATER MANAGEMENT NOTES: IT HAS BEEN ASSUMED THAT HOARDINGS/SILT FENCING WILL BE PROVIDED TO THE STAGE BOUNDARY SUFFICIENT TO PREVENT SEDIMENT RUNOFF FROM LEAVING SITE (EXCEPT IN RUNDFF FROM LEAVING SITE (EXCEPT IN THE CASE OF ENTRY/EXIT LOCATIONS WHERE TEMPORARY CONSTRUCTION ENTRY/EXIT SEDIMENT TRAP ARE PROVIDED. IF THIS IS NOT THE CASE, PROVIDE SEDIMENT FENCE TO STANDARD DETAIL BELOW AS REQUIRED OT PREVENT SEDIMENT FROM LEAVING SITE, DIRECT DIMANCE TO SEDIMENT BASED.

RUNNOFF TO SEDIMENT BASIN

ALL SEDIMENT CONTROL MEASURES ARE TO BE INSTALLED IN ACCORDANCE WITH LANDCOM MANAGING URBAN STORMWATER "BLUE BOOK".

SEDIMENT CONTROL FOR LANDSCAPED WORKS DOWNSTREAM OF THE BUILDING IS TO INCLUDE A SILTFENCE AND SANDBAGS

AS REQUIRED. INSTALL BUND TO DIVERT LIPSTREAM CATCHMENT AWAY FROM

DISTURBED SOIL AREA. TO BE MANAGED AT A RATE OF 166L/S PER HA BY THE CONTRACTOR ON SITE.

Post Approval – Consultation

Consultation needs to be meaningful, done with courtesy and respect and be well documented. These are people/ organisations that we need to be building meaningful relationships with.

Conditions of all consent can require consultation with a range of stakeholders. Consultation in the post approval world needs to be well documented to satisfy the condition requirements.

Examples include Council, service providers (eg. Electricity gas etc.), consult with local bus provider and TfNSW.

Read each condition carefully, any reference to consult triggers consultation.

Typically on State Significant Development, there will be a specific consultation condition as to how this piece can be appropriately addressed.

Consultation is not:

- A token gesture
- Done at the end of the piece of work,
- An email to the relevant stakeholder with no response;
- A meeting with the stakeholder with no meeting minutes.

Consultation is:

- Meaningful
- Done prior to the requirement,
- · Captures an outcome,
- Identifies matters resolved,
- Identifies matters unresolved,
- · Any disagreements are disclosed; and
- How we are going to address unresolved matters?

How to capture all the relevant details on consultation requirements? Any consultation requirement in a condition is required to be accompanied with the following table:

Post Approval Consultation Record

Identified Party to Consult:	City of Parramatta Council		
Consultation type:	SSDA Submission, Response to Submission correspondence		
When is consultation required?			
Why	To discuss any relevant input from Council as required by Consolidated Conditions for SSDA 9250948 – Epping West Public School (Condition B16).		
When was consultation scheduled/held	April 2021 15 June 2021 – response issued		
When was consultation held	April 2021 15 June 2021 – response issued		
Identify persons and positions who were involved	Stephen Naughton (stephen.naughton@ptcconsultants.co), Project Director, ptc.		
	Shana Cai (shana.cai@ptcconsultants.co), Engineer, ptc.		
5	Engineering Department, City of Parramatta Council		
Provide the details of the consultation	April 2021 Stormwater Management System Drawings prepared for SSDA submission by ptc. Council received plans as		
	15 June 2021 Council supplied response to exhibition of Proposed Epping West School stormwater management system.		
What specific matters were discussed?	The proposed Stormwater Management System for Epping West School		
What matters were resolved?	Preliminary assessment of the drainage disposal system was carried out. The overall concept and the methodology proposed for the control of the water quantity and water quality systems appears to be acceptable.		
What matters are unresolved?	Specific details of OSD etc, which is not part of the Construction Sediment and Erosion Control Plans		
Any remaining points of disagreement?	N/A		
How will SINSW address matters not resolved?	N/A

1 INTRODUCTION

This Construction Waste Management Plan (CWMP) has been prepared by EcCell Environmental on behalf of the School Infrastructure NSW (the Applicant) (SSD-9250948) for the Epping West Public-School. The school is located on 96-104 Carlingford Road and has a frontage to Carlingford Road in the City of Parramatta Council Local Government Area (LGA).

2 PROJECT DESCRIPTION

The Epping West Public School was established in 1927 and currently comprises of teaching spaces, demountable classrooms, outdoor play spaces, outdoor sports fields, a drop off for students with special needs and an on-grade staff carpark. The project will provide students with more permanent teaching spaces to better facilitate the delivery of modern teaching methods and support improving educational outcomes.

The project aims to:

- Demolish existing structure and build two buildings (one a two storey and one a three-storey building) and undertake refurbishment works.
- Upgrade core infrastructure and increase the capacity for new teaching and learning spaces across the Epping Primary Schools Community Group (SCG) to respond to the projected 2036 live-in catchment demand.
- Provide students with more permanent teaching spaces to better facilitate the delivery of modern pedagogies and support improving educational outcomes.

3 PROJECT LOCATION

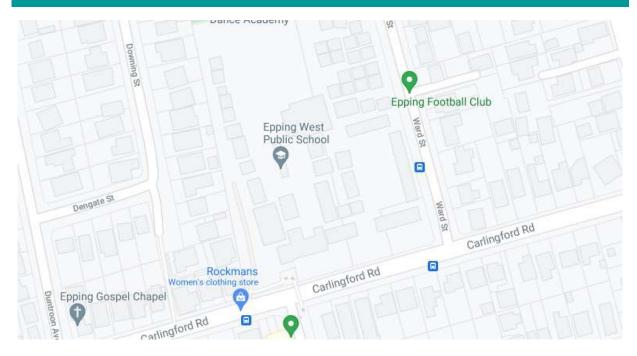

Figure 1. Approximate Site Location (Google Maps)

4 PURPOSE OF THE CWMP

The purpose of this CWMP is to meet the key waste requirements issues of the Secretary's Environmental Assessment Requirements (SEARs) Section 4.12 (8) of the Environmental Planning Assessment Act 1979 and SSD Condition B 12 and B 15 will:

- Identify, quantity and classify waste streams to be generated during construction.
- Identify appropriate servicing arrangements (including but not limited to, waste management, loading zones, mechanical plant) for the site.
- To ensure storage and collection of waste is designed and managed having appropriate regard to space, location, amenity and ongoing management of waste management facilities.
- Describe measures to be implemented to manage, reuse, and recycle and safely dispose of the waste.
- To maximise reuse and recycling of construction materials and materials from development.
- To encourage building design techniques in general which minimise waste generation.
- To minimise the amount of waste being deposited to landfill with targets to reuse or recycle at least 90% of construction and demolition waste .and
- address relevant requirements of the Waste Classification Guidelines (EPA, 2014).
- A requirement to record quantities, classification (for materials to be removed) and validation (for materials to remain) of each type of waste generated during construction and proposed information regarding the recycling and disposal locations; and confirmation of the contamination status of the development areas of the site based on the validation results.

5 NSW LEGISLATIVE REQUIREMENTS AND GUIDELINES

Relevant key legislation and guidelines applicable to the project include:

- NSW Department of Planning and Environment, Secretary's Environmental Assessment Requirements (SEARs)
- Protection of the Environment (General) Operations Act 1998
- Protection of the Environment Operations (Waste) Regulation 2014
- Waste Avoidance and Resource Recovery Act 2014
- NSW Environment Protection Authority (EPA) Waste Classification Guidelines, Part 1: Classifying Waste, November 2014 (EPA, 2014).

EcCell Environmental Pty Ltd 2021 Reference: **EWPS CWMP**

5.1 RESPONSE TO SEARS

The CWMP is required by the Secretary's Environmental Assessment Requirements (SEARs) for SSD-1. SSD-9250948) This table identifies the SEARs and relevant reference within this report.

Table 1 - SEARs Requirement & CWMP Page Reference

SEARs Item	Report Reference
Classification of the waste.	Page 8-10 PROJECT PHASE
Estimates / details of the quantity of each classification of waste to be generated during the construction of the project, including bulk earthworks and spoil balance.	Page 8-10 PROJECT PHASE
Handling of waste including measures to facilitate segregation and prevent cross contamination.	Page 4-5 ROLES AND RESPONSIBILITIES
Management of waste including estimated location and volume of stockpiles.	Page 8-10 PROJECT PHASE
Waste minimization and reuse.	Page 4-5 ROLES AND RESPONSIBILITIES
Lawful disposal or recycling locations for each type of waste.	Page 3-4 SERVICING ARRANGMENTS
Contingencies for the above, including managing unexpected waste volumes.	Page 3-4 SERVICING ARRANGMENTS

5.2 SSDA CONDITION B 12E AND B 15 A,B,C REQUIREMENT

The Construction Waste Management Sub-Plan (CWMSP) must address, but not be limited to, the procedures for the management of waste including the following: use;

Table 2 – SSDA Conditions B12 e and B15 a,b,c

SSD Condition B 12 and B15 a,b,c	Report Reference
a) the recording of quantities, classification (for materials to be removed) and validation (for materials to remain) of each type of waste generated during construction and proposed	Section 8
(b) information regarding the recycling and disposal locations; and	Page 8/9/10
c) confirmation of the contamination status of the development areas of the site based on the validation results.	Douglas Partners Report on Hazardous Building Materials (HBM) Survey April 2021 Appendix B

6 WASTE MANAGEMENT STRATEGIES

6.1 SERVICING ARRANGMENTS

The current legislation determines that the generator of waste is the owner of the waste until the waste crosses a calibrated weighbridge into a licensed facility. Waste contractors to demolition and construction teams are the primary transporters of waste off-site, accordingly, waste contractors will be required to provide verifiable monthly reports on waste reused, reprocessed or recycled (diverted from landfill) or waste sent to landfill. These reports have a direct bearing on the generator's compliance with the relevant regulations. The CWMP will be implemented on site throughout including singularly or collectively through the construction and fit out phases.

A Waste Data File must be maintained on-site and all entries are to include:

- The classification of the waste
- The time and date of material removed
- A description of and the volume of waste collected
- The location and name of the waste facility that the waste is transferred to
- The vehicle registration and the name of the waste contractor's company

The Waste Data File will be made available for inspection to any authorized officer at any time during the life of the site works. At the conclusion of site works, the designated person will retain all waste documentation and make this validating documentation available for inspection. Arrangement's will be made with the Waste Contractor to increase bin supply if there is an unexpected increase in waste generation.

6.2 CONSTRUCTION WASTE MANAGEMENT EQUIPMENT, BIN SIZES AND COLLECTION FREQUENCY

All waste will be removed by a licensed waste contractor using 15-meter bins on site. The construction waste will be removed when bins are full and within the construction site hours to reduce disturbance of the neighbours.

EcCell Environmental Pty Ltd 2021

Reference: **EWPS CWMP** Revision #: **VERSION 3**

6.3 ROLES AND RESPONSIBILITIES

The waste management strategy for the project will operate over the design, procurement, and construction including fit out of the project and is detailed in Table .

Table 3 - Breakdown of Tasks and Responsibilities

Table 5 - Breakdown of Tasks and Responsibilities	11 111 1
Management Strategies	Responsibilities
Design:	
Use of modular components in design	Architect & Engineer
Use of prefabricated components in design	Architect & Builder
Design for materials to standard sizes	Architect & Subcontractors
Design for operational waste minimisation	Architect & Builder
Consider ways to avoid, reuse and recycle construction wastes	Subcontractors.
Procurement:	
Select recycled and reprocessed materials	Architect, Engineer, Builder &
Select components that can be reused after deconstruction	Sub Contractors
Prioritise suppliers that take back offcuts and unused product.	Architect, Engineer & Builder
Encourage contractors and subcontractors that use unneeded offcuts and unused product for use on other jobs	Sub-Contractors
Ordering the right quantities of materials (Purchasing Policy);	Sub-Contractors
Include prefabrication of materials	
Pre-construction:	
Waste management plan to be reviewed & approved prior to	Builder
construction	
Contract a Waste Contractor	Waste Contractor
Construction on-site:	
Use the avoid, reuse, reduce, recycle principles	Builder & Waste Contractor
Minimisation of recurring packaging materials	Sub-contractors
Returning packaging to the supplier	Builder & Sub-contractor
Separation of recycling of materials off site	Waste Contractor
Audit and monitor the correct usage of bins	Builder & Waste Contractor
Audit and monitor the Waste Contractor	Builder
Avoiding construction waste	
Reduce extraneous packaging use reusable padding and careful packing	
All packaging generated on site should be captured for reuse or	
recycling wherever possible	Builder
Reuse formwork	Bander
Use modular components	
Use reuse non-returnable containers on the job site to the maximum extent possible	

6.4 ON SITE WASTE MANAGEMENT REQUIREMENTS

There will be a designated waste storage area for the disposal and storage of demolition and construction waste prior to collection. This area will be located conveniently for the construction work team to use the bins as well as for waste contractors to collect. An indicative location has been provided in Appendix A. Other requirements include:

- The routes for movement of waste between work site and waste storage area are to be kept obstruction-free.
- The routes for movement of bins and waste between storage and collection points are marked in the site drawing, and will be kept obstruction-free (if waste is moved between the waste storage area(s).
- The waste bin collection point provided will be accessible for waste collection vehicles. There are no obstructions to turning or reversing, pulling up vehicles and lifting bins.
- Access for waste collection vehicles will not be compromised by construction-related activities vehicles or other consequences of construction staging.
- All waste not being reused on site will be removed during, or at the completion of, the construction stage.
- No waste will be left on site unless it is part of valid reuse on site, which is integral to and in place in the design.
- In order to manage noise levels, collection of waste from the construction site will only occur during hours approved for construction work.
- All vehicles entering or leaving the site must have their loads covered.
- All vehicles, before leaving the site, to be cleaned of dirt, sand and other materials, to avoid tracking these materials onto public roads.
- At the completion of the works, the work site is left clear of waste and debris
- A requirement to record quantities, classification (for materials to be removed) and validation (for materials to remain) of each type of waste generated during construction and proposed information regarding the recycling and disposal locations; and confirmation of the contamination status of the development areas of the site based on the validation results.

7 WASTE MANAGEMENT PLAN APPLICATION

Project

Epping West Public School

Address

96 Carlingford Road, Epping, NSW.

Applicant

Department of Education c/o School Infrastructure NSW

Details of Application

Upgrade core infrastructure and increase the capacity for new teaching and learning spaces across the Epping primary Schools Community Group (SCG) to respond to the projected 2036 live-in catchment demand. Modular Buildings, to be reused onsite.

Description of Buildings and Other Structures Currently on the Site

Remove Building 'G'. Assemble Modular replace with a Type 'C' building.

Brief Description of Proposal

Upgrade core infrastructure and increase the capacity for new teaching and learning spaces across the Epping primary Schools Community Group (SCG) to respond to the projected 2036 live-in catchment demand. Modular Buildings, to be removed for reuse and demolish Building 'G'. Assemble Modular replace with a Type 'C' building.

Narrative:

As the contracts for all contractors have not been let there are still those including the waste contractor To Be advised (TBA).

All waste will be co-mingled and taken for off-site separation and reuse or recycling except Pallets and Reels and liquid waste to be sent to landfill for processing.

SSDA Compliance Conditions A.10

Refer over the page for a condition satisfaction table outlining where each of the conditions have been addressed throughout the CEMP.

Development Consent

Section 4.38 of the Environmental Planning and Assessment Act 1979

As delegate of the Minister for Planning and Public Spaces under delegation executed on 26 April 2021, I approve the Development Application referred to in Schedule 1, subject to the conditions specified in Schedule 2.

These conditions are required to:

- prevent, minimise, or offset adverse environmental impacts;
- set standards and performance measures for acceptable environmental performance;
- · require regular monitoring and reporting; and
- provide for the ongoing environmental management of the development.

Karen Harragon

Director

Social and Infrastructure Assessments

Sydney 10 September 2021

SCHEDULE 1

Application Number: SSD-9250948

Applicant: Department of Education

Consent Authority: Minister for Planning and Public Spaces

Site: 96-104 Carlingford Road, Epping

(Lot 1 DP161495, Lot 1 DP122509 and Lot 11 DP1099882)

Development: Upgrades to Epping West Public School, including:

- demolition and removal of selected buildings and structures;
- construction of one new three storey building and one new two storey building;
- refurbishment of existing retained buildings; and
- associated works, including tree removal and landscaping.

DEFINITIONS

	DEFINITIONS
Aboriginal object	Has the same meaning as the definition of the term in section 5 of the National Parks and Wildlife Act 1974
Aboriginal place	Has the same meaning as the definition of the term in section 5 of the National Parks and Wildlife Act 1974
Accredited Certifier	Means the holder of accreditation as an accredited certifier under the Building Professionals Act 2005 acting in relation to matters to which the accreditation applies
Advisory Notes	Advisory information relating to the consent but do not form a part of this consent
Applicant	NSW Department of Education or any other person carrying out any development to which this consent applies
BCA	Building Code of Australia
BC Act	Biodiversity Conservation Act 2016
CEMP	Construction Environmental Management Plan
Certification of Crown building work	Certification under section 6.28(2) of the EP&A Act
Certifier	Means a council or accredited certifier or in the case of Crown development, a person qualified to conduct a Certification of Crown Building work
Compliance Reporting Post Approval Requirements	Compliance Reporting Post Approval Requirements as available on the Department's website
Conditions of this consent	The conditions contained in Schedule 2 of this document
Construction	All physical work to enable operation including (unless specifically excluded by a condition) but not limited to the carrying out of works for the purposes of the development, including bulk earthworks, and erection of buildings and other infrastructure permitted by this consent, but excluding the following: • demolition and removal of buildings; • building and road dilapidation surveys; • investigative drilling or investigative excavation; • Archaeological Salvage; • establishing temporary site offices (in locations identified by the conditions of this consent); • installation of environmental impact mitigation measures, fencing, enabling works; and • minor adjustments to services or utilities However, where heritage items, or threatened species or threatened ecological communities (within the meaning of the <i>Biodiversity Conservation Act 2016 or Environment Protection and Biodiversity Conservation Act 1999</i>) are affected or potentially affected by any physical work, that work is construction, unless otherwise determined by the Planning Secretary in consultation with EES Group or DPIE Fisheries (in the case of impact upon fish, aquatic invertebrates or marine vegetation)
Councils	City of Parramatta Council
Day	The period from 7am to 6pm on Monday to Saturday, and 8am to 6pm on Sundays and Public Holidays
Demolition	The deconstruction and removal of buildings, sheds and other structures on the site
	on the site
Department	NSW Department of Planning, Industry and Environment

Development	The development described in the EIS and Response to Submissions, including the works and activities comprising as specified in Schedule 1 and as modified by the conditions of this consent
Earthworks	Bulk earthworks, site levelling, import and compaction of fill material, excavation for installation of drainage and services
EES Group	Environment, Energy and Science Group of the Department of Planning, Industry and Environment (Former Office of Environment and Heritage)
EIS	The Environmental Impact Statement titled <i>Environmental Impact</i> Statement State Significant Development (SSD 9250948) Alterations and Additions to Epping West Public School 96-104 Carlingford Road, Epping prepared by DFP dated 17 May 2021, submitted with the application for consent for the development, including any additional information provided by the Applicant in support of the application
Environment	Includes all aspects of the surroundings of humans, whether affecting any human as an individual or in his or her social groupings
EPA	NSW Environment Protection Authority
EP&A Act	Environmental Planning and Assessment Act 1979
EP&A Regulation	Environmental Planning and Assessment Regulation 2000
Evening	The period from 6pm to 10pm
Feasible	Means what is possible and practical in the circumstances
Heritage	Encompasses both Aboriginal and historic heritage including sites that predate European settlement, and a shared history since European settlement
Heritage NSW	Heritage, Community Engagement of the Department of Premier and Cabinet
Heritage Item	An item as defined under the <i>Heritage Act 1977</i> , and assessed as being of local, State and/ or National heritage significance, and/or an Aboriginal Object or Aboriginal Place as defined under the <i>National Parks and Wildlife Act 1974</i> ′, the World Heritage List, or the National Heritage List or Commonwealth Heritage List under the <i>Environment Protection and Biodiversity Conservation Act 1999</i> (Cth), or anything identified as a heritage item under the conditions of this consent
Incident	An occurrence or set of circumstances that causes, or threatens to cause, material harm and which may or may not be, or cause, a non-compliance <i>Note: "material harm" is defined in this consent</i>
Independent Audit Post Approval Requirements	Independent Audit Post Approval Requirements as available on the Department's website
Land	Has the same meaning as the definition of the term in section 1.4 of the EP&A Act
EMP	Environmental Management Plan
Management and mitigation measures	The management and mitigation measures set out in Appendix A
Material harm Minister	 Is harm that: a) involves actual or potential harm to the health or safety of human beings or to the environment that is not trivial; or b) results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000, (such loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment) NSW Minister for Planning and Public Spaces (or delegate)
	11317 milliotor for Flamming and Flabilio opacos (of delegate)

Monitoring Any monitoring required under this consent must be undertaken in accordance with section 9.39 of the EP&A Act Night The period from 10pm to 7am on Monday to Saturday, and 10pm to 8am on Sundays and Public Holidays Non-compliance An occurrence, set of circumstances or development that is a breach of this consent Operation The carrying out of the approved purpose of the development upon completion of construction excluding Operational readiness work Use of the completed areas of the development by school staff to prepare for the operation of the development Planning Secretary Planning Secretary under the EP&A Act, or nominee POEO Act Protection of the Environment Operations Act 1997 Reasonable Means applying judgement in arriving at a decision, taking into account: mitigation, benefits, costs of mitigation versus benefits provided, community views, and the nature and extent of potential improvements Rehabilitation The restoration of land disturbed by the development to a good condition, to ensure it is safe, stable and non-polluting Response to submissions The Applicant's response to issues raised in submissions received in relation to the application for consent for the development under the EP&A Act RtS Response to Submissions Sensitive receivers A location where people are likely to work, occupy or reside, including a dwelling, school, hospital, office or public recreational area	Mitigation	Activities associated with reducing the impacts of the development prior to or during those impacts occurring

SCHEDULE 2 PART A ADMINISTRATIVE CONDITIONS

Obligation to Minimise Harm to the Environment

A1. In addition to meeting the specific performance measures and criteria in this consent, all reasonable and feasible measures must be implemented to prevent, and, if prevention is not reasonable and feasible, minimise any material harm to the environment that may result from the construction and operation of the development.

Terms of Consent

- A2. The development may only be carried out:
 - (a) in compliance with the conditions of this consent;
 - (b) in accordance with all written directions of the Planning Secretary;
 - (c) generally in accordance with the EIS and Response to Submissions;
 - (d) in accordance with the approved plans in the table below:

- A3. Consistent with the requirements in this consent, the Planning Secretary may make written directions to the Applicant in relation to:
 - (a) the content of any strategy, study, system, plan, program, review, audit, notification, report or correspondence submitted under or otherwise made in relation to this consent,

- including those that are required to be, and have been, approved by the Planning Secretary;
- (b) any reports, reviews or audits commissioned by the Planning Secretary regarding compliance with this approval; and
- (c) the implementation of any actions or measures contained in any such document referred to in (a) above.
- A4. The conditions of this consent and directions of the Planning Secretary prevail to the extent of any inconsistency, ambiguity or conflict between them and a document listed in condition A2(c). In the event of an inconsistency, ambiguity or conflict between any of the documents listed in condition A2(c), the most recent document prevails to the extent of the inconsistency, ambiguity or conflict.

Limits of Consent

A5. This consent lapses five years after the date of consent unless work is physically commenced.

Prescribed Conditions

A6. The Applicant must comply with all relevant prescribed conditions of development consent under Part 6, Division 8A of the EP&A Regulation.

Planning Secretary as Moderator

A7. In the event of a dispute between the Applicant and a public authority, in relation to an applicable requirement in this approval or relevant matter relating to the Development, either party may refer the matter to the Planning Secretary for resolution. The Planning Secretary's resolution of the matter must be binding on the parties.

Evidence of Consultation

- A8. Where conditions of this consent require consultation with an identified party, the Applicant must:
 - (a) consult with the relevant party prior to submitting the subject document for information or approval; and
 - (b) provide details of the consultation undertaken including:
 - (i) the outcome of that consultation, matters resolved and unresolved; and
 - (ii) details of any disagreement remaining between the party consulted and the Applicant and how the Applicant has addressed the matters not resolved.

Staging

- A9. The project may be constructed and operated in stages. Where compliance with conditions is required to be staged due to staged construction or operation, a Staging Report (for either or both construction and operation as the case may be) must be prepared and submitted to the satisfaction of the Planning Secretary. The Staging Report must be submitted to the Planning Secretary no later than one month before the commencement of construction of the first of the proposed stages of construction (or if only staged operation is proposed, one month before the commencement of operation of the first of the proposed stages of operation).
- A10. A Staging Report prepared in accordance with condition A9 must:
 - if staged construction is proposed, set out how the construction of the whole of the project will be staged, including details of work and other activities to be carried out in each stage and the general timing of when construction of each stage will commence and finish;
 - (b) if staged operation is proposed, set out how the operation of the whole of the project will be staged, including details of work and other activities to be carried out in each stage and the general timing of when operation of each stage will commence and finish (if relevant);
 - (c) specify how compliance with conditions will be achieved across and between each of the stages of the project; and
 - (d) set out mechanisms for managing any cumulative impacts arising from the proposed staging.

- A11. Where a Staging Report is required, the project must be staged in accordance with the Staging Report, as approved by the Planning Secretary.
- A12. Where construction or operation is being staged in accordance with an approved Staging Report, the terms of this consent that apply or are relevant to the works or activities to be carried out in a specific stage must be complied with at the relevant time for that stage as identified in the Staging Report.

Staging, Combining and Updating Strategies, Plans or Programs

A13. The Applicant may:

- (a) prepare and submit any strategy, plan (including management plan, architectural or design plan) or program required by this consent on a staged basis (if a clear description is provided as to the specific stage and scope of the development to which the strategy, plan (including management plan, architectural or design plan) or program applies, the relationship of the stage to any future stages and the trigger for updating the strategy, plan (including management plan, architectural or design plan) or program);
- (b) combine any strategy, plan (including management plan, architectural or design plan), or program required by this consent (if a clear relationship is demonstrated between the strategies, plans (including management plan, architectural or design plan) or programs that are proposed to be combined); and
- (c) update any strategy, plan (including management plan, architectural or design plan), or program required by this consent (to ensure the strategies, plans (including management plan, architectural or design plan), or programs required under this consent are updated on a regular basis and incorporate additional measures or amendments to improve the environmental performance of the development).
- A14. Any strategy, plan or program prepared in accordance with condition A13, where previously approved by the Planning Secretary under this consent, must be submitted to the satisfaction of the Planning Secretary.
- A15. If the Planning Secretary agrees, a strategy, plan (including management plan, architectural or design plan), or program may be staged or updated without consultation being undertaken with all parties required to be consulted in the relevant condition in this consent.
- A16. Updated strategies, plans (including management plan, architectural or design plan), or programs supersede the previous versions of them and must be implemented in accordance with the condition that requires the strategy, plan, program or drawing.

Structural Adequacy

A17. All new buildings and structures, and any alterations or additions to existing buildings and structures, that are part of the development, must be constructed in accordance with the relevant requirements of the BCA.

Notes:

- Part 8 of the EP&A Regulation sets out the requirements for the certification of the development.
- Under section 21 of the Coal Mine Subsidence Compensation Act 2017, the Applicant is required to obtain the Chief Executive of Subsidence Advisory NSW's approval before carrying out certain development in a Mine Subsidence District.

External Walls and Cladding

A18. The external walls of all buildings including additions to existing buildings must comply with the relevant requirements of the BCA.

External Materials

- A19. The external colours, materials and finishes of the buildings must be consistent with the approved plans referenced in Condition A2. Any minor changes to the colour and finish of approved external materials may be approved by the Certifier provided:
 - (a) the alternative colour/material is of a similar tone/shade and finish to the approved external colours/building materials;
 - (b) the quality and durability of any alternative material is the same standard as the approved external building materials; and

(c) a copy of any approved changes to the external colours and/or building materials is provided to the Planning Secretary for information.

Applicability of Guidelines

- A20. References in the conditions of this consent to any guideline, protocol, Australian Standard or policy are to such guidelines, protocols, Standards or policies in the form they are in as at the date of this consent.
- A21. Consistent with the conditions of this consent and without altering any limits or criteria in this consent, the Planning Secretary may, when issuing directions under this consent in respect of ongoing monitoring and management obligations, require compliance with an updated or revised version of such a guideline, protocol, Standard or policy, or a replacement of them.

Monitoring and Environmental Audits

A22. Any condition of this consent that requires the carrying out of monitoring or an environmental audit, whether directly or by way of a plan, strategy or program, is taken to be a condition requiring monitoring or an environmental audit under Division 9.4 of Part 9 of the EP&A Act. This includes conditions in respect of incident notification, reporting and response, non-compliance notification, Site audit report and independent auditing.

Note: For the purposes of this condition, as set out in the EP&A Act, "monitoring" is monitoring of the development to provide data on compliance with the consent or on the environmental impact of the development, and an "environmental audit" is a periodic or particular documented evaluation of the development to provide information on compliance with the consent or the environmental management or impact of the development.

Access to Information

- A23. At least 48 hours before the commencement of construction until the completion of all works under this consent, or such other time as agreed by the Planning Secretary, the Applicant must:
 - (a) make the following information and documents (as they are obtained or approved) publicly available on its website:
 - (i) the documents referred to in condition A2 of this consent;
 - (ii) all current statutory approvals for the development;
 - (iii) all approved strategies, plans and programs required under the conditions of this consent;
 - (iv) regular reporting on the environmental performance of the development in accordance with the reporting arrangements in any plans or programs approved under the conditions of this consent:
 - a comprehensive summary of the monitoring results of the development, reported in accordance with the specifications in any conditions of this consent, or any approved plans and programs;
 - (vi) a summary of the current stage and progress of the development;
 - (vii) contact details to enquire about the development or to make a complaint;
 - (viii) a complaints register, updated monthly;
 - (ix) audit reports prepared as part of any independent audit of the development and the Applicant's response to the recommendations in any audit report;
 - (x) any other matter required by the Planning Secretary; and
 - (b) keep such information up to date, to the satisfaction of the Planning Secretary and publicly available for 12 months after the commencement of operations.

Compliance

A24. The Applicant must ensure that all of its employees, contractors (and their sub-contractors) are made aware of, and are instructed to comply with, the conditions of this consent relevant to activities they carry out in respect of the development.

Incident Notification, Reporting and Response

A25. The Planning Secretary must be notified through the major projects portal immediately after the Applicant becomes aware of an incident. The notification must identify the development

- (including the development application number and the name of the development if it has one), and set out the location and nature of the incident.
- A26. Subsequent notification must be given and reports submitted in accordance with the requirements set out in **Appendix 2**.

Non-Compliance Notification

- A27. The Planning Secretary must be notified through the major projects portal within seven days after the Applicant becomes aware of any non-compliance. The Certifier must also notify the Planning Secretary through the major projects portal within seven days after they identify any non-compliance.
- A28. The notification must identify the development and the application number for it, set out the condition of consent that the development is non-compliant with, the way in which it does not comply and the reasons for the non-compliance (if known) and what actions have been, or will be, undertaken to address the non-compliance.
- A29. A non-compliance which has been notified as an incident does not need to also be notified as a non-compliance.

Revision of Strategies, Plans and Programs

- A30. Within three months of:
 - (a) the submission of a compliance report under condition A33;
 - (b) the submission of an incident report under condition A26;
 - (c) the submission of an Independent Audit under condition C43 or C44;
 - (d) the approval of any modification of the conditions of this consent; or
 - (e) the issue of a direction of the Planning Secretary under condition A2 which requires a review,

the strategies, plans and programs required under this consent must be reviewed, and the Planning Secretary and the Certifier must be notified in writing that a review is being carried out.

A31. If necessary to either improve the environmental performance of the development, cater for a modification or comply with a direction, the strategies, plans, programs or drawings required under this consent must be revised, to the satisfaction of the Planning Secretary or Certifier (where previously approved by the Certifier). Where revisions are required, the revised document must be submitted to the Planning Secretary and / or Certifier for approval and / or information (where relevant) within six weeks of the review.

Note: This is to ensure strategies, plans and programs are updated on a regular basis and to incorporate any recommended measures to improve the environmental performance of the development.

Compliance Reporting

- A32. Compliance Reports of the project must be carried out in accordance with the Compliance Reporting Post Approval Requirements.
- A33. Compliance Reports must be submitted to the Department in accordance with the timeframes set out in the Compliance Reporting Post Approval Requirements, unless otherwise agreed by the Planning Secretary.
- A34. The Applicant must make each Compliance Report publicly available 60 days after submitting it to the Planning Secretary.
- A35. Notwithstanding the requirements of the Compliance Reporting Post Approval Requirements, the Planning Secretary may approve a request for ongoing annual operational compliance reports to be ceased, where it has been demonstrated to the Planning Secretary's satisfaction that an operational compliance report has demonstrated operational compliance.

PART B PRIOR TO COMMENCEMENT OF CONSTRUCTION

Notification of Commencement

- B1. The Applicant must notify the Planning Secretary in writing of the dates of the intended commencement of construction and operation at least 48 hours before those dates.
- B2. If the construction or operation of the development is to be staged, the Planning Secretary must be notified in writing at least 48 hours before the commencement of each stage, of the date of commencement and the development to be carried out in that stage.

Certified Drawings

B3. Prior to the commencement of construction, the Applicant must submit to the satisfaction of the Certifier structural drawings prepared and signed by a suitably qualified practising Structural Engineer that demonstrates compliance with this development consent.

External Walls and Cladding

B4. Prior to the commencement of construction, the Applicant must provide the Certifier with documented evidence that the products and systems proposed for use or used in the construction of external walls, including finishes and claddings such as synthetic or aluminium composite panels, comply with the requirements of the BCA. The Applicant must provide a copy of the documentation given to the Certifier to the Planning Secretary within seven days after the Certifier accepts it.

Protection of Public Infrastructure

- B5. Prior to the commencement of demolition, removal of buildings or construction (whichever occurs first), the Applicant must:
 - (a) consult with the relevant owner and provider of services that are likely to be affected by the development to make suitable arrangements for access to, diversion, protection and support of the affected infrastructure;
 - (b) prepare a dilapidation report identifying the condition of all public infrastructure in the vicinity of the site (including roads, gutters and footpaths); and
 - (c) submit a copy of the dilapidation report to the Planning Secretary, Certifier and Council.

Pre-Construction Dilapidation Report

B6. Prior to the commencement of demolition, removal of buildings or construction (whichever occurs first), the Applicant must submit a pre-commencement dilapidation report to Council, Heritage NSW and the Certifier. The report must provide an accurate record of the existing condition of adjoining private properties, heritage items and Council assets that are likely to be impacted by the proposed works.

Community Communication Strategy

B7. No later than 48 hours before the commencement of construction, a Community Communication Strategy must be submitted to the Planning Secretary for information. The Community Communication Strategy must provide mechanisms to facilitate communication between the Applicant, the relevant Council and the community (including adjoining affected landowners and businesses, and others directly impacted by the development), during the design and construction of the development and for a minimum of 12 months following the completion of construction.

The Community Communication Strategy must:

- (a) identify people to be consulted during the design and construction phases;
- (b) set out procedures and mechanisms for the regular distribution of accessible information about or relevant to the development;
- (c) provide for the formation of community-based forums, if required, that focus on key environmental management issues for the development;
- (d) set out procedures and mechanisms:
 - (i) through which the community can discuss or provide feedback to the Applicant;

- (ii) through which the Applicant will respond to enquiries or feedback from the community; and
- (iii) to resolve any issues and mediate any disputes that may arise in relation to construction and operation of the development, including disputes regarding rectification or compensation.

Ecologically Sustainable Development

- B8. Prior to the commencement of construction, unless otherwise agreed by the Planning Secretary, the Applicant must demonstrate that ESD is being achieved by either:
 - (a) registering for a minimum 4 star Green Star rating with the Green Building Council Australia and submit evidence of registration to the Certifier; or
 - (b) seeking approval from the Planning Secretary for an alternative certification process.

Outdoor Lighting

B9. Prior to commencement of lighting installation, evidence must be submitted to the satisfaction of the Certifier that all outdoor lighting within the site has been designed to comply with AS 1158.3.1:2005 Lighting for roads and public spaces – Pedestrian area (Category P) lighting – Performance and design requirements and AS 4282-2019 Control of the obtrusive effects of outdoor lighting.

Demolition

B10. Prior to the commencement of demolition and removal of buildings, demolition work plans required by AS 2601-2001 The demolition of structures (Standards Australia, 2001) must be accompanied by a written statement from a suitably qualified person that the proposals contained in the work plan comply with the safety requirements of the Standard. The work plans and the statement of compliance must be submitted to the Certifier and Planning Secretary.

Environmental Management Plan Requirements

B11. Management plans required under this consent must be prepared having regard to the relevant guidelines, including but not limited to the *Environmental Management Plan Guideline:*Guideline for Infrastructure Projects (DPIE April 2020).

Note:

- The Environmental Management Plan Guideline is available on the Planning Portal at: https://www.planningportal.nsw.gov.au/major-projects/assessment/post-approval
- The Planning Secretary may waive some of these requirements if they are unnecessary or unwarranted for particular management plans.

Construction Environmental Management Plan

- B12. Prior to the commencement of demolition, removal of buildings or construction (whichever occurs first), the Applicant must submit a Construction Environmental Management Plan (CEMP) to the Certifier and provide a copy to the Planning Secretary for information. The CEMP must include, but not be limited to, the following:
 - (a) Details of:
 - (i) hours of work;
 - (ii) 24-hour contact details of site manager;
 - (iii) management of dust and odour to protect the amenity of the neighbourhood;
 - (iv) external lighting in compliance with AS 4282-2019 Control of the obtrusive effects of outdoor lighting;
 - (v) community consultation and complaints handling as set out in the Community Communication Strategy required by condition B7;
 - (b) an unexpected finds protocol for Aboriginal and non-Aboriginal heritage and associated communications procedure;
 - (c) Construction Traffic and Pedestrian Management Sub-Plan (see condition B13);
 - (d) Construction Noise and Vibration Management Sub-Plan (see condition B14);
 - (e) Construction Waste Management Sub-Plan (see condition B15);
 - (f) Construction Soil and Water Management Sub-Plan (see condition B16);

- B13. The Construction Traffic and Pedestrian Management Sub-Plan (CTPMSP) must be prepared to achieve the objective of ensuring safety and efficiency of the road network and address, but not be limited to, the following:
 - (a) be prepared by a suitably qualified and experienced person(s);
 - (b) be prepared in consultation with Council and TfNSW;
 - (c) detail the measures that are to be implemented to ensure road safety and network efficiency during construction in consideration of potential impacts on general traffic, cyclists and pedestrians and bus services; and
 - (d) detail heavy vehicle routes, access and parking arrangements.
- B14. The Construction Noise and Vibration Management Sub-Plan must address, but not be limited to, the following:
 - (a) be prepared by a suitably qualified and experienced noise expert;
 - (b) describe procedures for achieving the noise management levels in EPA's *Interim Construction Noise Guideline* (DECC, 2009);
 - (c) describe the measures to be implemented to manage high noise generating works such as piling, in close proximity to sensitive receivers;
 - (d) include strategies that have been developed with the community for managing high noise generating works;
 - (e) describe the community consultation undertaken to develop the strategies in condition B14(d);
 - (f) include a complaints management system that would be implemented for the duration of the construction; and
 - (g) include a program to monitor and report on the impacts and environmental performance of the development and the effectiveness of the implemented management measures in accordance with the requirements of condition B11.
- B15. The Construction Waste Management Sub-Plan (CWMSP) must address, but not be limited to, the procedures for the management of waste including the following:
 - (a) the recording of quantities, classification (for materials to be removed) and validation (for materials to remain) of each type of waste generated during construction and proposed use;
 - (b) information regarding the recycling and disposal locations; and
 - (c) confirmation of the contamination status of the development areas of the site based on the validation results.
- B16. The Applicant must prepare a Construction Soil and Water Management Sub-Plan (CSWMSP) and the plan must address, but not be limited to the following:
 - (a) be prepared by a suitably qualified expert, in consultation with Council;
 - (b) measures to ensure that sediment and other materials are not tracked onto the roadway by vehicles leaving the site;
 - (c) describe all erosion and sediment controls to be implemented during construction, including as a minimum, measures in accordance with the publication Managing Urban Stormwater: Soils & Construction (4th edition, Landcom 2004) commonly referred to as the 'Blue Book':
 - (d) provide a plan of how all construction works will be managed in a wet-weather events (i.e. storage of equipment, stabilisation of the Site);
 - (e) detail all off-site flows from the site; and
 - (f) describe the measures that must be implemented to manage stormwater and flood flows for small and large sized events, including, but not limited to 1 in 5-year ARI.
- B17. A Driver Code of Conduct must be prepared and communicated by the Applicant to heavy vehicle drivers and must address the following:

- (a) minimise the impacts of earthworks and construction on the local and regional road network:
- (b) minimise conflicts with other road users;
- (c) minimise road traffic noise; and
- (d) ensure truck drivers use specified routes.

Construction Parking

B18. Prior to the commencement of construction, the Applicant must submit a Construction Worker Transportation Strategy to the Certifier. The Strategy must detail the provision of sufficient parking facilities or other travel arrangements for construction workers in order to minimise demand for parking in nearby public and residential streets or public parking facilities. A copy of the strategy must be provided to the Planning Secretary for information.

Operational Noise - Design of Mechanical Plant and Equipment

- B19. Prior to installation of mechanical plant and equipment:
 - (a) a detailed assessment of mechanical plant and equipment with compliance with the relevant project operational noise criteria as recommended in the noise impact assessment dated 21 April 2021 and prepared by RWDI must be undertaken by a suitably qualified person; and
 - (b) evidence must be submitted to the Certifier that any noise mitigation recommendations identified in the assessment carried out under (a) have been incorporated into the design to ensure the development will not exceed the project noise trigger levels identified in the Noise Impact Assessment dated 21 April 2021 and prepared by RWDI.

Construction Access arrangements

- B20. Prior to the commencement of demolition and/or removal of buildings and construction, evidence of compliance of construction parking and access arrangements with the following requirements must be submitted to the Certifier:
 - (a) all vehicles must enter and leave the Site in a forward direction;
 - (b) the swept path of the longest construction vehicle entering and exiting the site in association with the new work, as well as manoeuvrability through the site, is in accordance with the latest version of AS 2890.2; and
 - (c) the safety of vehicles and pedestrians accessing adjoining properties, where shared vehicle and pedestrian access occurs, has been addressed.

Public Domain Works

B21. Prior to the commencement of any footpath or public domain works, the Applicant must consult with Council and demonstrate to the Certifier that the streetscape design and treatment meets the requirements of Council, including addressing pedestrian management. The defined extent of any footpath and public domain works is limited to the western side of Ward Street between the existing road reserve extension to the south and the angled parking to the north. The Applicant must submit documentation of approval for each stage from Council to the Certifier.

Site Contamination

B22. Prior to the commencement of construction, the Applicant must engage a NSW EPA-accredited Site Auditor to provide advice throughout the duration of works to ensure that any work required in relation to soil or groundwater contamination is appropriately managed.

PART C DURING CONSTRUCTION

Site Notice

- C1. A site notice(s) must be prominently displayed at the boundaries of the site during construction for the purpose of informing the public of project details and must satisfy the following requirements:
 - (a) minimum dimensions of the site notice(s) must measure 841 mm x 594 mm (A1) with any text on the site notice(s) to be a minimum of 30-point type size;
 - (b) the site notice(s) must be durable and weatherproof and must be displayed throughout the works period;
 - (c) the approved hours of work, the name of the builder, Certifier, structural engineer, site/project manager, the responsible managing company (if any), its address and 24-hour contact phone number for any inquiries, including construction/ noise complaint must be displayed on the site notice(s); and
 - (d) the site notice(s) must be mounted at eye level on the perimeter hoardings/fencing and must state that unauthorised entry to the site is not permitted.

Operation of Plant and Equipment

C2. All construction plant and equipment used on site must be maintained in a proper and efficient condition and operated in a proper and efficient manner.

Demolition

C3. Demolition work must comply with the demolition work plans required by *Australian Standard AS 2601-2001 The demolition of structures* (Standards Australia, 2001) and endorsed by a suitably qualified person as required by condition B10.

Construction Hours

- C4. Construction, including the delivery of materials to and from the site, may only be carried out between the following hours:
 - (a) between 7am and 6pm, Mondays to Fridays inclusive; and
 - (b) between 8am and 1pm, Saturdays.

No work may be carried out on Sundays or public holidays.

- C5. Notwithstanding condition C4, provided noise levels do not exceed the existing background noise level plus 5dB, works may also be undertaken during the following hours:
 - (a) between 6pm and 7pm, Mondays to Fridays inclusive; and
 - (b) between 1pm and 4pm, Saturdays.
- C6. Construction activities may be undertaken outside of the hours in condition C4 and C5 if required:
 - (a) by the Police or a public authority for the delivery of vehicles, plant or materials; or
 - (b) in an emergency to avoid the loss of life, damage to property or to prevent environmental harm; or
 - (c) where the works are inaudible at the nearest sensitive receivers; or
 - (d) for the delivery, set-up and removal of construction cranes, where notice of the cranerelated works is provided to the Planning Secretary and affected residents at least seven days prior to the works; or
 - (e) where a variation is approved in advance in writing by the Planning Secretary or his nominee if appropriate justification is provided for the works.
- C7. Notification of such construction activities as referenced in condition C6 must be given to affected residents before undertaking the activities or as soon as is practical afterwards.
- C8. Rock breaking, rock hammering, sheet piling, pile driving and similar activities may only be carried out between the following hours:
 - (a) 9am to 12pm, Monday to Friday;

- (b) 2pm to 5pm Monday to Friday; and
- (c) 9am to 12pm, Saturday.

Implementation of Management Plans

C9. The Applicant must carry out the construction of the development in accordance with the most recent version of the CEMP (including Sub-Plans).

Construction Traffic

C10. All construction vehicles are to be contained wholly within the site, except if located in an approved on-street work zone, and vehicles must enter the site or an approved on-street work zone before stopping.

Hoarding Requirements

- C11. The following hoarding requirements must be complied with:
 - (a) no third-party advertising is permitted to be displayed on the subject hoarding/ fencing;
 and
 - (b) the construction site manager must be responsible for the removal of all graffiti from any construction hoardings or the like within the construction area within 48 hours of its application.

No Obstruction of Public Way

C12. The public way (outside of any approved construction works zone) must not be obstructed by any materials, vehicles, refuse, skips or the like, under any circumstances.

Construction Noise Limits

- C13. The development must be constructed to achieve the construction noise management levels detailed in *the Interim Construction Noise Guideline* (DECC, 2009). All feasible and reasonable noise mitigation measures must be implemented and any activities that could exceed the construction noise management levels must be identified and managed in accordance with the management and mitigation measures identified in the approved Construction Noise and Vibration Management Plan.
- C14. The Applicant must ensure construction vehicles (including concrete agitator trucks) do not arrive at the site or surrounding residential precincts outside of the construction hours of work outlined under condition C4.
- C15. The Applicant must implement, where practicable and without compromising the safety of construction staff or members of the public, the use of 'quackers' to ensure noise impacts on surrounding noise sensitive receivers are minimised.

Vibration Criteria

- C16. Vibration caused by construction at any residence or structure outside the site must be limited to:
 - (a) for structural damage, the latest version of *DIN 4150-3 (1992-02) Structural vibration Effects of vibration on structures* (German Institute for Standardisation, 1999); and
 - (b) for human exposure, the acceptable vibration values set out in the *Environmental Noise Management Assessing Vibration: a technical guideline* (DEC, 2006) (as may be updated or replaced from time to time).
- C17. Vibratory compactors must not be used closer than 30 metres from residential buildings unless vibration monitoring confirms compliance with the vibration criteria specified in condition C16.
- C18. The limits in conditions C16 and C17 apply unless otherwise outlined in a Construction Noise and Vibration Management Plan, approved as part of the CEMP required by condition B14 of this consent.

Tree Removal

C19. The following trees as identified in the Arboricultural Impact Assessment for Epping West Public School prepared by *Arboreport* dated 22 April 2021 are approved for removal: tree No.'s 102, 104, 105, 106, 107, 115 and 116.

Tree Protection

- C20. For the duration of the construction works:
 - (a) street trees must not be trimmed or removed unless it forms a part of this development consent or prior written approval from Council is obtained or is required in an emergency to avoid the loss of life or damage to property;
 - (b) all street trees immediately adjacent to the property boundaries must be protected at all times during construction in accordance with Council's tree protection requirements. Any street tree, which is damaged or removed during construction due to an emergency, must be replaced, to the satisfaction of Council;
 - (c) all trees on the site that are not approved for removal must be suitably protected during construction as per the recommendations of the Arboricultural Impact Assessment for Epping West Public School prepared by *Arboreport* dated 22 April 2021; and
 - (d) if access to the area within any protective barrier is required during the works, it must be carried out under the supervision of a qualified arborist. Alternative tree protection measures must be installed, as required. The removal of tree protection measures, following completion of the works, must be carried out under the supervision of a qualified arborist and must avoid both direct mechanical injury to the structure of the tree and soil compaction within the canopy or the limit of the former protective fencing, whichever is the greater.

Air Quality

- C21. The Applicant must take all reasonable steps to minimise dust generated during all works authorised by this consent.
- C22. During construction, the Applicant must ensure that:
 - (a) activities are carried out in a manner that minimises dust including emission of windblown or traffic generated dust;
 - (b) all trucks entering or leaving the site with loads have their loads covered;
 - (c) trucks associated with the development do not track dirt onto the public road network;
 - (d) public roads used by these trucks are kept clean; and
 - (e) land stabilisation works are carried out progressively on site to minimise exposed surfaces.

Imported Fill

- C23. The Applicant must:
 - (a) ensure that only VENM, ENM, or other material that meets the requirements of a relevant order and exemption issued by the EPA, is brought onto the site;
 - (b) keep accurate records of the volume and type of fill to be used; and
 - (c) make these records available to the Certifier upon request.

Disposal of Seepage and Stormwater

C24. Adequate provisions must be made to collect and discharge stormwater drainage during construction to the Certifier. The prior written approval of Council must be obtained to connect or discharge site stormwater to Council's stormwater drainage system or street gutter.

Emergency Management

C25. The Applicant must prepare and implement awareness training for employees and contractors, including locations of the assembly points and evacuation routes, for the duration of construction.

Stormwater Management System

C26. Within three months of the commencement of construction, the Applicant must design an operational stormwater management system for the development and submit it to the satisfaction of the Certifier. The system must:

- (a) be designed by a suitably qualified and experienced person(s);
- (b) be generally in accordance with the conceptual design in the RtS;
- (c) be in accordance with applicable Australian Standards; and
- (d) ensure that the system capacity has been designed in accordance with *Australian Rainfall* and *Runoff* (Engineers Australia, 2016) and *Managing Urban Stormwater: Council* Handbook (EPA, 1997) guidelines:

Unexpected Finds Protocol – Aboriginal Heritage

- C27. In the event that surface disturbance identifies a new Aboriginal object:
 - (a) all works must halt in the immediate area to prevent any further impacts to the object(s);
 - (b) a suitably qualified archaeologist and the registered Aboriginal representatives must be contacted to determine the significance of the objects;
 - (c) the site is to be registered in the Aboriginal Heritage Information Management System (AHIMS) which is managed by Heritage NSW under Department of Premier and Cabinet and the management outcome for the site included in the information provided to AHIMS;
 - (d) the Applicant must consult with the Aboriginal community representatives, the archaeologists and Heritage NSW to develop and implement management strategies for all objects/sites; and
 - (e) works shall only recommence with the written approval of Planning Secretary.

Unexpected Finds Protocol – Historic Heritage

- C28. If any unexpected archaeological relics are uncovered during the work, then:
 - (a) all works must cease immediately in that area and notice is to be given to Heritage NSW and the Planning Secretary;
 - (b) depending on the possible significance of the relics, an archaeological assessment and management strategy may be required before further works can continue in that area as determined in consultation with Heritage NSW; and
 - (c) works may only recommence with the written approval of the Planning Secretary.

Pedestrian Infrastructure Upgrades

C29. Within three months of the commencement of construction (or within another period agreed to by the Planning Secretary), the Applicant must provide evidence to the satisfaction of the Planning Secretary demonstrating that an agreement has been made with Council for payment of funds by the Applicant to Council for the provision of a new footpath on the east side of Ward Street between Carlingford Road and Lilli Pilli Street.

Waste Storage and Processing

- C30. All waste generated during construction must be secured and maintained within designated waste storage areas at all times and must not leave the site onto neighbouring public or private properties.
- C31. All waste generated during construction must be assess, classified and managed in accordance with the Waste Classification Guidelines Part 1: Classifying Waste (EPA, 2014).
- C32. The Applicant must ensure that concrete waste and rinse water are not disposed of on the site and are prevented from entering any natural or artificial watercourse.
- C33. The Applicant must record the quantities of each waste type generated during construction and the proposed reuse, recycling and disposal locations for the duration of construction.
- C34. The Applicant must ensure that the removal of hazardous materials, particularly the method of containment and control of emission of fibres to the air, and disposal at an approved waste disposal facility is in accordance with the requirements of the relevant legislation, codes, standards and guidelines.

Outdoor Lighting

C35. The Applicant must ensure that all external lighting is constructed, operated and maintained in in accordance with AS 4282-2019 Control of the obtrusive effects of outdoor lighting.

Site Contamination

- C36. The Applicant must conduct site investigations to confirm the full nature and extent of the contamination at the project area and comply with the following requirements:
 - (a) the site investigations must be undertaken, and the subsequent report(s), must be prepared in accordance with relevant guidelines made or approved by the EPA under section 105 of the *Contaminated Land Management Act 1997*;
 - (b) the reports must be prepared, or reviewed and approved, by consultants certified under either the Environment Institute of Australia and New Zealand's Certified Environmental Practitioner (Site Contamination) scheme (CEnvP(SC)) or the Soil Science Australia Certified Professional Soil Scientist Contaminated Site Assessment and Management (CPSS CSAM) scheme; and
 - (c) the recommendations of the Remediation Action Plan for Epping West Public School prepared by *Douglas Partners* dated 22 April 2021.
- C37. Where additional contamination is identified in the investigations undertaken under condition C36, the Remediation Action Plan for Epping West Public School prepared by *Douglas Partners* dated 22 April 2021 must be updated and be provided to the NSW EPA-accredited Site Auditor for approval.
- C38. Prior to commencing with the remediation, the Applicant must submit to the Certifier, an Interim Audit Advice from an EPA accredited Site Auditor that advises that the site can be made suitable for the proposed use subject to the implementation of the with Remediation Action Plan for Epping West Public School prepared by *Douglas Partners* dated 22 April 2021 (or as revised under condition C37) and that the Remediation Action Plan (as revised where applicable) is appropriate. A copy should also be provided to the Planning Secretary for information.
- C39. Remediation of the site must be carried out in accordance with Remediation Action Plan for Epping West Public School prepared by *Douglas Partners* dated 22 April 2021 and any variations to the Remediation Action Plan approved by an NSW EPA-accredited Site Auditor.
- C40. Where remediation is carried out / completed in stages, a NSW EPA-accredited Site Auditor must confirm satisfactory completion of each stage by the issuance of Interim Audit Advice(s) prior to occupation of that area.
- C41. The Applicant must ensure the proposed development does not result in a change of risk in relation to any pre-existing contamination on the site that would result in significant contamination.

Independent Environmental Audit

- C42. Proposed independent auditors must be agreed to in writing by the Planning Secretary prior to the commencement of an Independent Audit.
- C43. Independent Audits of the development must be conducted and carried out in accordance with the Independent Audit Post Approval Requirements.
- C44. The Planning Secretary may require the initial and subsequent Independent Audits to be undertaken at different times to those agreed to above, upon giving at least 4 week's notice to the Applicant of the date or timing upon which the audit must be commenced.
- C45. In accordance with the specific requirements in the Independent Audit Post Approval Requirements, the Applicant must:
 - (a) review and respond to each Independent Audit Report prepared under condition C43 of this consent, or condition C44 where notice is given;
 - (b) submit the response to the Planning Secretary; and
 - (c) make each Independent Audit Report and response to it publicly available within 60 days after submission to the Planning Secretary.
- C46. Independent Audit Reports and the applicant/proponent's response to audit findings must be submitted to the Planning Secretary within two months of undertaking the independent audit site

- inspection as outlined in the Independent Audit Post Approval Requirements unless otherwise agreed by the Planning Secretary.
- C47. Notwithstanding the requirements of the Independent Audit Post Approval Requirements, the Planning Secretary may approve a request for ongoing independent operational audits to be ceased, where it has been demonstrated to the Planning Secretary's satisfaction that an audit has demonstrated operational compliance.

Operational Readiness Work

- C48. Operational readiness work must not commence on site until the following details have been submitted to the Certifier:
 - a plan and description of the area(s) of the site to be used for operational readiness work (including pedestrian access) and areas still under construction (including construction access);
 - (b) the maximum number of staff to be involved in operational readiness work on site at any one time:
 - (c) arrangements to ensure the safety of school staff on the site, including how:
 - areas to be used for operational readiness work will be clearly and securely separated from the areas of the site still under construction;
 - (ii) pedestrian access to and within the site will be managed to ensure no conflict with construction vehicle movements; and
 - (d) access and parking arrangements to minimise impacts on the surrounding street network having regard to number of staff involved in operational readiness work on site at any one time and parking arrangements for construction workers on site.
- C49. Operational readiness work must only be undertaken in accordance with the details submitted under condition C48 and the following requirements:
 - (a) no more than 15 staff are involved in operational readiness work at any one time;
 - (b) no students or parents are permitted to access that area of the site and
 - (c) the Applicant has implemented appropriate arrangements to ensure the safety of school staff at all times within the site during operational readiness.

PART D PRIOR TO COMMENCEMENT OF OPERATION

Notification of Occupation

D1. At least one month before commencement of operation, the date of commencement of the operation of the development must be notified to the Planning Secretary in writing. If the operation of the development is to be staged, the Planning Secretary must be notified in writing at least one month before the commencement of each stage, of the date of commencement and the development to be carried out in that stage.

External Walls and Cladding

- D2. Prior to commencement of operation, the Applicant must provide the Certifier with documented evidence that the products and systems used in the construction of external walls including finishes and claddings such as synthetic or aluminium composite panels comply with the requirements of the BCA.
- D3. The Applicant must provide a copy of the documentation given to the Certifier to the Planning Secretary within seven days after the Certifier accepts it.

Works as Executed Plans

D4. Prior to the commencement of operation, works-as-executed drawings signed by a registered surveyor demonstrating that the stormwater drainage and finished ground levels have been constructed as approved, must be submitted to the Certifier.

Warm Water Systems and Cooling Systems

D5. The installation of warm water systems and water cooling systems (as defined under the *Public Health Act 2010*), where proposed, must comply with the *Public Health Act 2010*, Public Health Regulation 2012 and Part 1 (or Part 3 if a Performance-based water cooling system) of *AS/NZS 3666.2:2011 Air handling and water systems of buildings – Microbial control – Operation and maintenance* and the NSW Health Code of Practice for the Control of Legionnaires' Disease.

Stormwater Detention Positive Covenant and Restriction

D6. Prior to the commencement of operation, the Applicant must create a Positive Covenant and Restriction on the Use of Land under Section 88E of the *Conveyancing Act 1919*, burdening the owner of the land with the requirement to maintain the on-site stormwater detention and water sensitive urban design facilities on the lot.

Note:

- The terms of the 88E Instruments are to be generally in accordance with Parramatta City Council's "standard terms" available in Council's website, under Development Forms.
- Where a Title exists, the Positive Covenant and Restriction on the Use of Land is to be created through via an
 application to the Land Registry Services Office using forms 13PC and 13RPA. The 88E Instruments shall be
 submitted to Council for approval. Copy of the registered title documents showing the covenants and restrictions
 must be submitted to Council for records.

Outdoor Lighting

- D7. Prior to the commencement of operation, the Applicant must submit evidence from a suitably qualified practitioner to the Certifier that demonstrates that installed lighting associated with the development achieves the objective of minimising light spillage to any adjoining or adjacent sensitive receivers and:
 - (a) complies with the latest version of AS 4282-2019 Control of the obtrusive effects of outdoor lighting (Standards Australia, 1997); and
 - (b) has been mounted, screened and directed in such a manner that it does not create a nuisance to surrounding properties or the public road network.

Mechanical Ventilation

- D8. Prior to commencement of operation, the Applicant must provide evidence to the satisfaction of the Certifier that the installation and performance of the mechanical ventilation systems complies with:
 - (a) AS 1668.2-2012 The use of air-conditioning in buildings Mechanical ventilation in buildings and other relevant codes; and
 - (b) any dispensation granted by Fire and Rescue NSW.

Operational Noise - Design of Mechanical Plant and Equipment

D9. Prior to the commencement of operation, the Applicant must submit evidence to the Certifier that the noise mitigation recommendations in the assessment undertaken under condition B19 have been incorporated into the design of mechanical plant and equipment to ensure the development will not exceed the project noise trigger levels identified in the Noise Impact Assessment dated 21 April 2021 and prepared by RWDI.

Fire Safety Certification

D10. Prior to commencement of occupation, a Fire Safety Certificate must be obtained for all the Essential Fire or Other Safety Measures forming part of this consent. A copy of the Fire Safety Certificate must be submitted to the relevant authority and Council. The Fire Safety Certificate must be prominently displayed in the building.

Structural Inspection Certificate

- D11. Prior to the commencement of occupation of the relevant parts of any new or refurbished buildings, a Structural Inspection Certificate or a Compliance Certificate must be submitted to the Certifier. A copy of the Certificate with an electronic set of final drawings (contact approval authority for specific electronic format) must be submitted to the approval authority and the Council after:
 - (a) the site has been periodically inspected and the Certifier is satisfied that the structural works is deemed to comply with the final design drawings; and
 - (b) the drawings listed on the Inspection Certificate have been checked with those listed on the final Design Certificate/s.

Post-construction Dilapidation Report

- D12. Prior to commencement of operation, the Applicant must engage a suitably qualified person to prepare a post-construction dilapidation report at the completion of construction. This report is:
 - to ascertain whether the construction created any structural damage to adjoining buildings or infrastructure;
 - (b) to be submitted to the Certifier. In ascertaining whether adverse structural damage has occurred to adjoining buildings or infrastructure, the Certifier must:
 - (i) compare the post-construction dilapidation report with the pre-construction dilapidation report required by these conditions; and
 - (ii) have written confirmation from the relevant authority that there is no adverse structural damage to their infrastructure and roads.
 - (c) to be forwarded to Council for information.

Protection of Public Infrastructure

- D13. Unless the Applicant and the applicable authority agree otherwise, the Applicant must:
 - (a) repair, or pay the full costs associated with repairing, any public infrastructure that is damaged by carrying out the development; and
 - (b) relocate, or pay the full costs associated with relocating any infrastructure that needs to be relocated as a result of the development.

Note: This condition does not apply to any damage to roads caused as a result of general road usage.

Road Damage

D14. Prior to the commencement of operation, the cost of repairing any damage caused to Council or other Public Authority's assets in the vicinity of the Subject Site as a result of construction works associated with the approved development must be met in full by the Applicant.

Protection of Property

D15. Unless the Applicant and the applicable owner agree otherwise, the Applicant must repair, or pay the full costs associated with repairing any property that is damaged by carrying out the development.

Bicycle Parking and End-of-Trip Facilities

- D16. Prior to the commencement of operation, compliance with the following requirements for secure bicycle parking and end-of-trip facilities must be submitted to the Certifier:
 - (a) the provision of a minimum 60 bicycle and scooter parking spaces;
 - (b) the layout, design and security of bicycle facilities must comply with the minimum requirements of the latest version of AS 2890.3:2015 *Parking facilities Bicycle parking*, and be located in easy to access, well-lit areas that incorporate passive surveillance;
 - (c) the provision of end-of-trip facilities for staff; and
 - (d) appropriate pedestrian and cyclist advisory signs are to be provided.

Note: All works/regulatory signposting associated with the proposed development shall be at no cost to the relevant roads authority.

School Zones

D17. Prior to the commencement of operation, all required School Zone signage, speed management signage and associated pavement markings along Ward Street and Carlingford Road must be installed, inspected by TfNSW and handed over to TfNSW.

Note: Any required approvals for altering public road speed limits, design and signage are required to be obtained from the relevant consent authority.

D18. The Applicant must maintain records of all dates in relation to installing, altering and removing traffic control devices related to speed.

School Transport Plan

- D19. Prior to the commencement of operation, a School Transport Plan (STP), must be submitted to the satisfaction of the Planning Secretary. The plan must:
 - (a) be prepared by a suitably qualified consultant in consultation with Council and TfNSW;
 - (b) include arrangements to promote the use of active and sustainable transport modes, including:
 - (i) objectives and modes share targets (i.e. Site and land use specific, measurable and achievable and timeframes for implementation);
 - (ii) specific tools and actions to help achieve the objectives and mode share targets;
 - (iii) details regarding the methodology and monitoring/review program to measure the effectiveness of the objectives and mode share targets, including the frequency of monitoring and the requirement for travel surveys to identify travel behaviours of users of the development.
 - (c) include operational transport access management arrangements, including:
 - (i) detailed pedestrian analysis including the identification of safe route options to identify the need for management measures such as staggered school start and finish times to ensure students and staff are able to access and leave the Site in a safe and efficient manner during school start and finish;
 - (ii) the location of all car parking spaces on the school campus and their allocation (i.e. staff, visitor, accessible, emergency, etc.);
 - (iii) the location and operational management procedures of the drop-off and pick-up parking, including staff management/traffic controller arrangements;
 - (iv) the location and operational management procedures for the drop-off and pick-up of students by buses and coaches including staff management/traffic controller arrangements;
 - (v) delivery and services vehicle and bus access and management arrangements;
 - (vi) management of approved access arrangements:
 - (vii) potential traffic impacts on surrounding road networks and mitigation measures to minimise impacts, including measures to mitigate queuing impacts associated with vehicles accessing drop-off and pick-up zones;
 - (viii) car parking arrangements and management associated with the proposed use of school facilities by community members; and

- (d) measures to promote and support the implementation of the plan, including financial and human resource requirements, roles and responsibilities for relevant employees involved in the implementation of the plan; and
- (e) a monitoring and review program.

Utilities and Services

D20. Prior to commencement of operation, the Applicant must obtain a Compliance Certificate for water and sewerage infrastructure servicing of the site under section 73 of the *Sydney Water Act 1994*.

Stormwater Operation and Maintenance Plan

- D21. Prior to the commencement of operation, a Stormwater Operation and Maintenance Plan (SOMP) is to be submitted to the Certifier. The SOMP must ensure the proposed stormwater quality measures remain effective and contain the following:
 - (a) maintenance schedule of all stormwater quality treatment devices;
 - (b) record and reporting details;
 - (c) relevant contact information; and
 - (d) Work Health and Safety requirements.

Signage

- D22. Way-finding signage and signage identifying the location of staff car parking must be installed prior to the commencement of operation.
- D23. Prior to the commencement of operation, bicycle way-finding signage must be installed within the site to direct cyclists from footpaths to designated bicycle parking areas.

Operational Waste Management Plan

- D24. Prior to the commencement of operation, the Applicant must prepare a Waste Management Plan for the development and submit it to the Certifier. The Waste Management Plan must:
 - (a) detail the type and quantity of waste to be generated during operation of the development;
 - (b) describe the handling, storage and disposal of all waste streams generated on site, consistent with the Protection of the Environment Operations Act 1997, Protection of the Environment Operations (Waste) Regulation 2014 and the Waste Classification Guideline (Department of Environment, Climate Change and Water, 2009);
 - (c) detail the materials to be reused or recycled, either on or off site; and
 - (d) include the Management and Mitigation Measures included in EIS.

Site Contamination

D25. Prior to the commencement of operation, the Applicant must submit a Section A1 Site Audit Statement or a Section A2 Site Audit Statement accompanied by an Environmental Management Plan (if required) prepared by a NSW EPA accredited Site Auditor. The Section A1 or A2 Site Audit Statement must verify the relevant part of the site which is subject of occupation for the intended land use and be provided, along with any Environmental Management Plan to the Planning Secretary and the Certifier.

Landscaping

- D26. Prior to the commencement of operation landscaping of the site must be completed in accordance with landscape plan(s) listed in condition A2(d).
- D27. Prior to the commencement of operation, the Applicant must prepare a Landscape Management Plan to manage the revegetation and landscaping on-site and submit it to the Certifier. The plan must:
 - (a) describe the ongoing monitoring and maintenance measures to manage revegetation and landscaping; and
 - (b) be consistent with the Applicant's Management and Mitigation Measures in the EIS.

Pedestrian Infrastructure Upgrades

D28. Prior to the commencement of operation, the Applicant must provide evidence to the satisfaction of the Planning Secretary demonstrating that the payment of funds by the Applicant to Council agreed under condition C29 has been made for the provision of a new footpath on the east side of Ward Street between Carlingford Road and Lilli Pilli Street.

PART E POST OCCUPATION

Operation of Plant and Equipment

E1. All plant and equipment used on site must be maintained in a proper and efficient condition operated in a proper and efficient manner.

Warm Water Systems and Cooling Systems

E2. The operation and maintenance of warm water systems and water cooling systems (as defined under the Public Health Act 2010), where proposed, must comply with the Public Health Act 2010, Public Health Regulation 2012 and Part 2 (or Part 3 if a Performance-based water cooling system) of AS/NZS 3666.2:2011 Air handling and water systems of buildings – Microbial control – Operation and maintenance and the NSW Health Code of Practice for the Control of Legionnaires' Disease.

Community Communication Strategy

E3. The Community Communication Strategy must be implemented for a minimum of 12 months following the completion of construction.

Environmental Management Plan

E4. Upon completion of remediation works, the Applicant must manage the site in accordance with the Environmental Management Plan approved by the Site Auditor (if any) under condition D25 and any on-going maintenance of remediation notice issued by EPA under the Contaminated Land Management Act 1997.

Operational Noise Limits

- E5. The Applicant must ensure that noise generated by operation of the development does not exceed the noise limits in Noise Impact Assessment dated 21 April 2021 and prepared by RWDI.
- E6. The Applicant must undertake short term noise monitoring in accordance with the *Noise Policy for Industry* where valid data is collected following the commencement of use of each stage of the development. The monitoring program must be carried out by an appropriately qualified person and a monitoring report must be submitted to the Planning Secretary within two months of commencement use of each stage of the development or other timeframe agreed to by the Planning Secretary to verify that operational noise levels do not exceed the recommended noise levels for mechanical plant identified in Noise Impact Assessment dated 21 April 2021 and prepared by RWDI. Should the noise monitoring program identify any exceedance of the recommended noise levels referred to above, the Applicant is required to implement appropriate noise attenuation measures so that operational noise levels do not exceed the recommended noise levels or provide attenuation measures at the affected noise sensitive receivers.

Unobstructed Driveways and Parking Areas

E7. All driveways, footways and parking areas must be unobstructed at all times. Driveways, footways and car spaces must not be used for the manufacture, storage or display of goods, materials, refuse, skips or any other equipment and must be used solely for vehicular and/or pedestrian access and for the parking of vehicles associated with the use of the premises.

School Transport Plan

E8. The School Transport Plan required by condition D19 of this consent must be updated annually and implemented unless otherwise agreed by the Planning Secretary.

Ecologically Sustainable Development

E9. Unless otherwise agreed by the Planning Secretary, within six months of commencement of operation, Green Star certification must be obtained demonstrating the development achieves a minimum 4 star Green Star Design & As Built rating. If required to be obtained, evidence of the certification must be provided to the Certifier and the Planning Secretary. If an alternative certification process has been agreed to by the Planning Secretary under condition B8, evidence of compliance of implementation must be provided to the Planning Secretary and Certifier.

Outdoor Lighting

E10. Notwithstanding condition D7, should outdoor lighting result in any residual impacts on the amenity of surrounding sensitive receivers, the Applicant must provide mitigation measures in consultation with affected landowners to reduce the impacts to an acceptable level.

Landscaping

E11. The Applicant must maintain the landscaping and vegetation on the site in accordance with the approved Landscape Management Plan required by condition D26 for the duration of occupation of the development.

APPENDIX 1 ADVISORY NOTES

General

AN1. All licences, permits, approvals and consents as required by law must be obtained and maintained as required for the development. No condition of this consent removes any obligation to obtain, renew or comply with such licences, permits, approvals and consents.

Long Service Levy

AN2. For work costing \$25,000 or more, a Long Service Levy must be paid. For further information please contact the Long Service Payments Corporation Helpline on 131 441.

Legal Notices

AN3. Any advice or notice to the consent authority must be served on the Planning Secretary.

Access for People with Disabilities

AN4. The works that are the subject of this application must be designed and constructed to provide access and facilities for people with a disability in accordance with the BCA. Prior to the commencement of construction, the Certifier must ensure that evidence of compliance with this condition from an appropriately qualified person is provided and that the requirements are referenced on any certified plans.

Utilities and Services

- AN5. Prior to the construction of any utility works associated with the development, the Applicant must obtain relevant approvals from service providers.
- AN6. Prior to the commencement of above ground works written advice must be obtained from the electricity supply authority, an approved telecommunications carrier and an approved gas carrier (where relevant) stating that satisfactory arrangements have been made to ensure provisions of adequate services.

Road Design and Traffic Facilities

AN7. All roads and traffic facilities must be designed to meet the requirements of Council or TfNSW (whichever is applicable). The necessary permits and approvals from the relevant road authority must be obtained prior to the commencement of road or pavement construction works.

Road Occupancy Licence

AN8. A Road Occupancy Licence must be obtained from the relevant road authority for any works that impact on traffic flows during construction activities.

SafeWork Requirements

AN9. To protect the safety of work personnel and the public, the work site must be adequately secured to prevent access by unauthorised personnel, and work must be conducted at all times in accordance with relevant SafeWork requirements.

Hoarding Requirements

AN10. The Applicant must submit a hoarding application to Council for the installation of any hoardings over Council footways or road reserve.

Handling of Asbestos

AN11.The Applicant must consult with SafeWork NSW concerning the handling of any asbestos waste that may be encountered during construction. The requirements of the Protection of the Environment Operations (Waste) Regulation 2014 with particular reference to Part 7 – 'Transportation and management of asbestos waste' must also be complied with.

Speed limit authorisation

- AN12.At least eight weeks prior to the commencement of operation, the Applicant must submit the following details to TfNSW and obtain authorisation to install School Zone signs and associated pavement markings, and / or removal / relocation of any existing Speed Limit signs:
 - (a) a copy of the conditions of consent;

- (b) the proposed school commencement/opening date;
- (c) two sets of detailed design plans showing the following:
 - (i) accurate Site boundaries;
 - (ii) details of all road reserves, adjacent to the Site boundaries;
 - (iii) all proposed access points from the Site to the public road network and any additional conditions imposed/proposed on their use;
 - (iv) all existing and proposed pedestrian crossing facilities on the adjacent road network;
 - (v) all existing and proposed traffic control devices and pavement markings on the adjacent road network (including School Zone signs and pavement markings); and
 - (vi) all existing and proposed street furniture and street trees.

Fire Safety Certificate

AN13. The owner must submit to Council an Annual Fire Safety Statement, each 12 months after the final Safety Certificate is issued. The certificate must be on, or to the effect of, Council's Fire Safety Statement.

APPENDIX 2 WRITTEN INCIDENT NOTIFICATION AND REPORTING REQUIREMENTS

Written Incident Notification Requirements

- A written incident notification addressing the requirements set out below must be emailed to the Planning Secretary through the major projects portal within seven days after the Applicant becomes aware of an incident. Notification is required to be given under this condition even if the Applicant fails to give the notification required under condition A25 or, having given such notification, subsequently forms the view that an incident has not occurred.
- 2. Written notification of an incident must:
 - (a) identify the development and application number;
 - (b) provide details of the incident (date, time, location, a brief description of what occurred and why it is classified as an incident);
 - (c) identify how the incident was detected;
 - (d) identify when the applicant became aware of the incident;
 - (e) identify any actual or potential non-compliance with conditions of consent;
 - (f) describe what immediate steps were taken in relation to the incident;
 - (g) identify further action(s) that will be taken in relation to the incident; and
 - (h) identify a project contact for further communication regarding the incident.
- 3. Within 30 days of the date on which the incident occurred or as otherwise agreed to by the Planning Secretary, the Applicant must provide the Planning Secretary and any relevant public authorities (as determined by the Planning Secretary) with a detailed report on the incident addressing all requirements below, and such further reports as may be requested.
- 4. The Incident Report must include:
 - (a) a summary of the incident;
 - (b) outcomes of an incident investigation, including identification of the cause of the incident;
 - (c) details of the corrective and preventative actions that have been, or will be, implemented to address the incident and prevent recurrence; and
 - (d) details of any communication with other stakeholders regarding the incident.

A.11	External Lighting Compliance

09/09/2021

Hansen Yuncken

Building 1, L3, 75-85 O'Riordan Street Alexandria NSW 2015

Attention: Sasha Vuckovic

Dear Sasha,

Project: Epping West Public School

Document title; Design Intent Statement – Electrical, ICT, Dry Fire, And Security Services

Pursuant to the provisions of Clause A5.2 of the National Construction Code of Australia (NCC2019), we hereby certify that the above design is in accordance with the normal engineering practice and meets the requirements of EFSG (except for those items listed in the departure schedule), TSG requirements, PRG requirements, school operation requirements, the Educational Model, the Functional Design Brief, and the Building Code of Australia and relevant Australian Standards as applicable. In particular the following NCC Sections/clauses and Australian Standards:

NCC E4 and AS 2293.1-2018 Emergency and Exit Lighting

NCC E2.2b Specific Provisions Smoke Detection

AS/CA S008- 2013 Requirements for customer cabling products.

AS/NZS 3080- 2013 Information technology

NCC F4, AS 1680.0-2009, AS4282, AS1158, Artificial Lighting

& SSDA Conditions B9 and B12a.

NCC J6 Artificial Lighting and Power
NCC J8 Facilities for Energy Monitoring

AS 3000-2018 General Electrical Works

Should any further confirmations or evidence be required to support this statement please enquire to myself directly via email; nicolas.sleiman@erbas.com.au

Company: Erbas and Associates Pty Ltd

Full Name of the Certifier: Nicolas Sleiman

Position: Associate Engineer - Electrical Services

Qualifications: Bachelor of Engineering

Signature:

Construction Environmental Management Plan (CEMP)

Epping West Public School Alterations and Additions

A.12 Site Investigation Executive Summary (Groundwater Investigation)

The below is an extract from the Detailed Site Investigation for the Epping West Public School that was conducted from Environmental Investigation Services (EIS) in April 2021.

Executive Summary

Douglas Partners Pty Ltd (DP) has been engaged by School Infrastructure NSW to complete this Detailed Site (Contamination) Investigation (DSI) for a proposed Epping West Public School upgrade at 96 Carlingford Road, Epping (the site). Whilst this DSI covers the entire Epping West Public School, it is noted that the works have been commissioned predominantly to support a State Significant Development Application (SSDA) for a proposed school upgrade, which is a sub-area of the site (the SSDA site). The objective of the DSI is to: a) assess the suitability of the SSDA site for the proposed redevelopment and whether further investigation and / or management of contamination is required; b) to provide information for potential future remediation and / or management for the remainder of the school.

The investigation included a review of previous investigations undertaken at the site, soil sampling from 29 locations, (26 drilled boreholes, three hand-augured boreholes), and laboratory analysis for contaminants of potential concern (COPC) and interpretation of results with reference to current NSW EPA endorsed guidelines.

A review of previous reports indicates that the campus site was used for educational use, the surrounding land was used for residential land use, and prior to 1955 for agricultural purposes. Key potential sources of contamination identified from previous investigations included former agricultural land use, fill of unknown origin, former deposition of lead and chromate containing paint pigment dust, on-site bonfires and hazardous building materials (asbestos, lead, PCB, SMF) from former and current buildings.

The current investigation encountered fill in all test locations to depths of between 0.4 m and 2.1 m below ground level (bgl) and previous investigation recorded fill to depths of between 0.2 m and 4.3 m bgl.

Laboratory results were below the SAC for all analytes in the PSI and DSI with exception of TRH/TPH, B(a)P, PCB and asbestos. These analytes exceeded the health and / or ecological based guidelines in one or more samples. TRH was also exceeding the Management Limits in samples BHP109/1.4-1.5 and BHP123/0.15-0.25. The presence of TRH in samples across the site and TPH following silica gel clean-up suggest a potential for some localised areas of petroleum contamination in surface soils.

Asbestos was detected by the laboratory at two test locations, based on the site history and fill encountered it is considered that asbestos may be present in fill in other locations. The preliminary waste classification for the soils across the site is General Solid Waste (non-putrescible) - Special Waste (Asbestos) unless additional assessment confirms an absence of asbestos.

Overall, it is considered that the SSDA Site may be made suitable for the proposed redevelopment conditional upon the following recommendations:

- Development of a remediation action plan (RAP) to manage the identified contamination and potential health and environmental risks outlined within this report;
- Sampling and testing for HBM (including asbestos) from footprints of the building to be demolished, following demolition. The correct handling and removal procedures for hazardous building materials are detailed in the hazardous material building report;

6	Revised appendix 7.1 and 7.2 Included changes in line with updated Public Health Orders	PF	18/10/2021
6	Included reference to toolbox talks.	PF	18/10/2021
7	Included section 3.8 What to do if a worker who tests positive for COVID-19 has been in the workplace Removed appendix 7.1 Emergency Protocol for Suspected Case of COVID-19 and 7.2 Protocol for Confirmed case of COVID-19	PF	22/10/2021

Change I	nformation		
8	Updated close contact definition	PF	12/1/2022
	COVID-19 daily worker questionnaire/declaration that referred to 14 days now refer to 7 days.		
	Updated isolation requirements for close contacts		
	Removed references to the use of Services NSW QR code app		
	Removed question "BEEN ON ANOTHER WORK SITE WHERE COVID 19 HAS BEEN IDENTIFIED WITHIN THE LAST 14 DAYS?" from HY COVID-19 daily questionnaire/declaration		
	Section "Protocol to Manage sites where a person becomes unwell at work/home" and Section "What to do if a worker who tests positive for COVID-19 has been in the workplace" replaced with Section 3.6 "Requirements for COVID-19 Positive Cases/Close Contacts" and Section 3.7 "Process for Managing a Positive COVID-19 Case"		
	Removed Section "Covid -19 Risk Assessment"		
	Removed Section "Risk Management"		
	Removed Section "Contact Management" – incorporated into Section 3.6 "Requirements for COVID-19 Positive Cases/Close Contacts"		
	Removed car pooling rules from Section "Prestart Meeting Content"		
	Removed requirement for seating plan in Section" Meal/Lunch Breaks"		
	Updated Section "Face Masks" to include latest requirements		
	Replaced "Lunchrooms will be cleaned 4 times a day i.e. after each sitting" to "Lunchrooms will be cleaned regularly during the day" in Section "Cleaning of Site Amenities / Offices"		
	Sections "Tools and Equipment" and "Mobile Plant"- removed requirement for cleaning requirements to be captured in the relevant SWMS.		
	Section "Notification to SafeWork NSW" updated to include "notify SafeWork NSW using the online form on following link https://covid.safework.nsw.gov.au/forms/9377 ."		
9	Updated requirements for SafeWork NSW notification Section 6.3	PF	24/1/2022
9.1	Updated plan in line with NSW Government requirements for COVID-19.	PF	10/3/2022
9.2	Updated plan in line with NSW Government requirements for close contacts – Section 3.3	PF	22/4/2022

2 Commitment & Policy

2.1 Scope

This Management Plan details requirements for the management of COVID-19 on all Hansen Yuncken projects and forms part of the project WHS Management Plan.

2.2 Purpose

This document is to assist all HY staff, subcontractors, clients & essential site visitors in managing and mitigating the risks to health & safety amid the COVID-19 pandemic.

The aim of this document is to provide guidance & options where available to controlling the risks in the day-to-day operations of all HY construction sites.

This document is subject to change whenever the advice from regulators, industry bodies or health professionals is updated.

This plan will be reviewed where required in line with updates from the NSW Government and recorded in the Document Control and Review section of this plan.

2.3 COVID-19 Information

CLOSE CONTACT DEFINITION

Close contacts will be defined, except in exceptional circumstances (as deemed by NSW Health), as a household contact of a confirmed COVID-19 case.

A household contact is someone who lives with a confirmed case or has spent more than 4 hours with them in a house, accommodation or care facility setting.

For Latest COVID-19 case locations, requirements for testing, restrictions and alerts in NSW use the following link.

https://www.health.nsw.gov.au/Infectious/covid-19/Pages/case-locations-and-alerts.aspx

3 Wellbeing of Workers

3.1 Entry to Site

3.1.1 General

Entry points must have COVID- 19 declaration signage displayed.

3.2 Exclude Workers Who are Unwell from the Site.

A poster will be displayed at entry points to the site that details you are not to enter the site if you have:

- Travelled to or attended any COVID hotspots as advised by the NSW Government
- Tested positive for COVID-19 within the last 7 days
- Been assessed as being in close contact with a confirmed case of COVID-19 in the last 7 days.
- Been experiencing Flu like symptoms including shortness of breath or high temperature in the last 7 days

3.3 Requirements for COVID-19 Positive Cases/Close Contacts

Workers are advised that if they develop symptoms of CVOID-19 they should NOT attend work and seek to get tested immediately.

The testing can be a Rapid Antigen Test (RAT) or a PCR Test if a RAT is not available.

If the RAT result is positive, then you do not need a PCR test.

You need to register your positive RAT result with Services NSW on the following link https://apply.service.nsw.gov.au/register-positive-rapid-antigen-test-result/

Confirmed positive cases of COVID-19 must:

- Isolate for seven days from the date they tested positive.
- Inform their Employer and the workplace the date of their test, the date they got sick (if they have symptoms), and the days they were at work whilst infectious these assist with contact tracing.
- Inform people they have spent time with from 2 days before they started having symptoms or tested positive (whichever came first) that they have COVID-19.
- Continue to isolate beyond 7 days if they have still have symptoms and remain in isolation until they
 no longer have symptoms.
- Once they complete their isolation Monitor for symptoms for a further 7 days and repeat testing if symptoms occur.

Continue to wear a mask for a further 7 days regardless of test outcomes.

Close contacts are defined in Section 2.3 (close contact definition), except in exceptional circumstances (as deemed by NSW Health), as a household contact of a confirmed COVID-19 case.

Close contacts will not have to isolate, provided that they have no symptoms and comply with the following guidelines:

- Do not visit aged care, hospitals, disability, and correctional facilities unless a special exemption applies.
- Wear a face mask in all indoor settings when outside the home.
- Undertake daily RAT tests before coming into close contact with people outside their household, where practicable.

- Avoid contact with elderly and immunocompromised persons where possible.
- Work from home where practical.
- Notify their employer that they are a close contact, and that they are not required to isolate as long as they comply with the above requirements.

Close contacts will need to comply with the above guidelines for 7 days from the time a person in their household tested positive for COVID-19.

NOTE: Any work being undertaken at hospitals, disability and correctional facilities will remain off limits for close contacts unless a special exemption applies.

All other contacts who have been potentially exposed to a case but who are at lower risk of infection must monitor for symptoms and only need to have a RAT if symptoms occur.

NOTE: Workers are requested to notify Hansen Yuncken site management as soon as they become aware of having tested positive to COVID-19 or have been notified they are a close contact.

3.4 Process for Managing a Positive COVID-19 Case

Hansen Yuncken and/or a subcontractor might be notified that a worker who has attended the workplace has tested positive for COVID-19 by:

- public health authorities
 - the worker who has tested positive
- an employer of a worker who visits the workplace.

The privacy and confidentiality of the person who tested positive for COVID-19 must always be maintained.

1) A worker who has received a positive COVID-19 test result must notify their employer and Hansen Yuncken immediately.

The worker who has received the positive test result must follow government directions below.

- > The Worker must stay isolated for 7 days from the day of their test result.
- > The Worker must remain isolated until they no longer have any symptoms.
- The Worker will continue to monitor for symptoms for a further 7 days and repeat testing if symptoms occur.
- 2) Hansen Yuncken and subcontractors (and subject to the type, nature or size of the workplace, the Safety Committee) to discuss the positive case to identify where they have been on site or in the workplace to determine high touch point areas that require a more detailed clean.

Work is to continue as normal in the workplace while a detailed clean is conducted.

It should also be noted that a third party clean and hygienist sign off is not required.

3) All workers who are present in the workplace at the same time as the worker who has tested COVID-19 positive are to be notified by their Employer / Manager of the positive case.

All workers who are identified as having been potentially exposed to the positive case are required to monitor for symptoms.

NOTE: It is recommended that all workers who are identified as having been potentially exposed also notify their own household members so that they too can monitor for symptoms.

4) The workplace should continue to work as normal, ensuring all sensible and practical COVID-19 safe measures are in place including regular cleaning, good hygiene practices are also observed, effective check-in procedures are enforced, and suitable PPE is used.

3.4.1 Business responsibilities for informing workers

Advise workers and contractors of the general situation, noting that the privacy and confidentiality of the person who tested positive for COVID-19 must always be maintained. Information provided should include:

- Symptoms of COVID-19 that staff and contractors should monitor themselves for
- Where to seek advice and help
- Reminders to staff, contractors, visitors and customers to not enter the premises if they are unwell.
- Advice on physical distancing and personal hygiene measures (e.g. hand hygiene and cough etiquette)
- What infection control measures has put in place, including cleaning
- Any other specific advice provided by public health authorities.

3.4.2 Closing down the premises may or may not be required

Businesses do not necessarily have to close if a worker has tested positive to COVID-19.

Unless instructed to close by NSW Health, HY senior management will determine whether the site will remain open, or to close and reopen, based on:

Ongoing transmission.

Evidence of ongoing spread of infection (transmission) from person to person in the workplace might mean the business has to close temporarily to stop transmission between workers.

3.4.3 Cleaning guidance

All areas used by any suspected or confirmed case of COVID-19 should be cleaned and disinfected.

For hard surfaces, either:

- use detergent and water for cleaning followed by disinfectant solution (2-step clean)
- use a combined detergent and disinfectant solution (2-in-1 clean).

The recommended disinfectant is a Therapeutic Goods Administration (TGA) approved hospital grade disinfectant.

Specialist cleaning is not required.

3.5 Provision of Training and Advice

Staff will be inducted in the COVID-19 Management Plan.

For information on good hygiene for coronavirus (COVID-19) staff will access the following link https://www.health.gov.au/news/health-alerts/novel-coronavirus-2019-ncov-health-alert/how-to-protect-yourself-and-others-from-coronavirus-covid-19

3.6 COVID-19 Vaccinations

The Australian Government is in the process of rolling out the COVID-19 vaccine program. COVID-19 vaccines will be offered to everyone living in Australia and the rollout is based on phases and priority groups.

We acknowledge that electing to have the vaccine is a personal choice.

You will need to keep your manager informed of your appointment date (if during work hours), prior to it taking place, and when you will be away from work.

Should you be feeling unwell and need some recovery time following your vaccination, time off work and notification to your manager remains as per our standard Personal (Sick) Leave policy.

Hansen Yuncken will encourage all subcontractors to provide support if their workers elect to get vaccinated with some provision of paid time off during work hours to attend the appointment.

NSW Government Book a COVID Vaccination posters will be displayed on site.

3.7 Mandatory Vaccination Requirements

Mandatory vaccinations (fully vaccinated) are required for workers within school grounds, within hospital buildings, where required by the client or where a risk assessment identifies the need.

Where there is a requirement for mandatory vaccinations HY site team members will check for compliance prior to the worker entering the site

3.8 Proof of Vaccination Status

You can get an immunisation history statement or COVID-19 digital certificate to show proof of your vaccinations.

3.9 Surveillance COVID-19 Testing

If the client has a requirement for COVID 19 surveillance testing, HY site team members will check for compliance prior to the worker entering the site.

3.10 Proof of COVID-19 test

You must have proof of your COVID-19 test such as an SMS text message on your phone or an email addressed to you.

3.11 Wellbeing of staff

Our EAP is available to all Hansen Yuncken employees (and immediate family members) and provides a confidential support service across a range of areas.

EAP services are provided by independent psychologists who are experienced in providing counselling and practical solution focused support in a sensitive and supportive manner.

Employees can access EAP services directly (at no cost) for either personal for work related issues, which can include the stresses of COVID 19 and the impact it has on our lives.

NSW EAP: MEND Services

Contact number: 1800 300 011

Email: info@mendservices.com.au

Reference number: 81 51 55

4 Physical Distancing

4.1 General

Hansen Yuncken offices and sites will comply with the NSW Government requirements.

4.2 Meal / Lunch breaks

Where practicable, place tables and chairs externally of the site sheds (i.e., under covered walkways) in the open or within the building structure (where there is adequate air flow).

Consider marking tables to advise of safe sitting distances.

The following items are NOT to be stored in lunch sheds:

- Shared mugs / cups
- Shared cutlery / plates / teaspoons
- Sandwich toasters

Encourage:

- Workers to bring in their own plates, cups, cutlery and/ drink bottles
- There shall be amenities provided to allow workers to clean these items immediately after use.
- These items are to be placed into individual Cooler/Chiller bags/boxes (Esky's) or the like.

There shall be amenities provided to allow workers to clean these items immediately after use.

These items are to be placed into individual Cooler/Chiller - bags/boxes (Esky's) or the like.

5 Hygiene and Cleaning

5.1 General

Posters are displayed in offices and across our sites to promote good personal hygiene. This includes hand washing guidelines, sanitisation, cough and sneezing measures and other key information relating to infection control.

We recommend that HY employees/ workers/ visitors do not share PPE unless anti-viral disinfectant measures are available.

This includes hat, boots, vests, glasses, and gloves.

5.2 Face Masks

Masks are only mandated on public transport, planes, and indoors at airports, hospitals, aged and disability care facilities, corrections facilities or where required by the client or where a risk assessment identifies the need.

Masks are encouraged for indoor settings where you cannot maintain a safe distance from others.

5.3 Hand Washing

Posters are displayed in offices and across our sites to promote good personal hygiene. This includes hand washing guidelines, cough and sneezing measures and other key information relating to infection control.

5.4 Cleaning of Site Amenities / Offices

Lunchrooms, offices, amenities and first aid rooms shall be cleaned regularly and disinfected using a hospital grade disinfectant.

Cleaning frequency will be daily as a minimum, determined by numbers on-site and weather conditions.

Workers undertaking this cleaning need to have the following PPE:

- Disposable gloves
- Appropriate safety eyewear

When cleaning ensure all surfaces are wiped cleaned with detergent or disinfectant solution or wipe.

Areas/items to be cleaned include:

- Tables, benches and desks,
- Sinks
- Hot water services and pie warmers
- Entry handrails (where applicable) and door handles
- Fridges and microwaves are to be cleaned inside & out
- Computer keyboards, mouses and phones are to be wiped
- Plan racks are to be wiped
- Floors are to be mopped with hot water and disinfectant
- Air conditioner filters are to be cleaned regularly and recorded in BIM on register
- Taps and washing facilities

5.5 Tools and Equipment

Workers need to consult daily about tasks to be undertaken and where practicable limit tools and equipment to individual use.

5.6 Mobile plant

Consideration needs to be given to trying to maintain the same operators in mobile plant where practicable.

6 Record Keeping

6.1 Hansen Yuncken Staff Records

Hansen Yuncken will maintain records of their staff that includes:

- records of other sites visited
- place of residence to determine whether staff are required to undertake surveillance COVID-19 testing
- mandatory surveillance COVID-19 testing results and/or be vaccinated against COVID-19
- age and vaccination status if a person declines to provide vaccination information, it is sufficient to record that fact

6.2 Notification to SafeWork NSW

SafeWork NSW will be notified of any hospitalisation or any fatality, where the worker contracted COVID-19, or is likely to have contracted COVID-19, at the workplace.

2. AUDIT DETAILS					
Assigned to • (0/6)					
2.1	Audit Purpose / Scope				
	Project Delivery (Surveillance) Audit				
	Follow-up Audit				
2.2	Project Start Date				
	Ö				
2.3	Project Planned PC Date				
2.4	Audit Date				
	Ö				
2.5	Auditor				
2.6	Audit Summary				
	Description (Provide brief Summary of Audit scope and findings in response box)				
3. WH	S PLANNING & AWARENESS				
Assign	ed to • (0/2)				
3.1	Induction training and induction records are in place				
	○ Pass ○ Fail ○ N/A				
3.2	Site files and registers are maintained and up-to-date				
	○ Pass ○ Fail ○ N/A				
4. HSE	E RISK ASSESSMENT				

Assign	Assigned to • (0/4)					
4.1	HSE hazards are adequately assessed in the Project HSE Risk assessment					
	○ Pass ○ Fail ○ N/A					
4.2	Current Project HSE Risk Assessment is available to workers / displayed					
	○ Pass ○ Fail ○ N/A					
4.3	HSE Risk assessment has been reviewed/updated and identifies current/applicable hazards					
	○ Pass ○ Fail ○ N/A					
4.4	High Risk Identifier completed for the month and posted on noticeboard					
	○ Pass ○ Fail ○ N/A					
5. SUE	SCONTRACTOR HSE MANAGEMENT					
Assign	ed to • (0/7)					
5.1	Current Subcontractor WHS Specification is being used					
	○ Pass ○ Fail ○ N/A					
5.2	Subcontractor WHS Startup Submissions are being obtained and reviewed					
	○ Pass ○ Fail ○ N/A					
5.3	Subcontractor WHS Compliance Audits are being conducted					
	○ Pass ○ Fail ○ N/A					
	Description Compliance Audits shall be conducted within the first 3 months of commencement of the relevant S/C to assess whether the S/C is complying with the requirements of, and commitments made in, their WHS startup documentation submission. Audits shall be scheduled based on risk with a focus on HRCW.					
5.4	SWMS Review processes are established and up todate					
	○ Pass ○ Fail ○ N/A					
5.5	Task Observations are being scheduled and conducted					
	○ Pass ○ Fail ○ N/A					
5.6	HSE Hazard Rectifications / Improvement Notices / Suspension Notices, are being issued and closed out accordingly.					

SC134-1	Epping West Public School				
	○ Pass ○ Fail ○ N/A				
5.7	Work Permit Systems are in place and up to date				
	○ Pass ○ Fail ○ N/A				
6. SI	TE MANAGEMENT				
Assig	ned to • (0/2)				
6.1	Housekeeping is adequate				
	○ Pass ○ Fail ○ N/A				
6.2	Site is free of slip/trip hazards				
	○ Pass ○ Fail ○ N/A				
7. CC	OMMUNICATION & CONSULTATION				
Assig	ned to • (0/6)				
7.1	Site consultation arrangements have been established and displayed				
	○ Pass ○ Fail ○ N/A				
7.2	Site signage complies with HY requirements				
	○ Pass ○ Fail ○ N/A				
7.3	Site safety notice board is maintained and includes required information				
	○ Pass ○ Fail ○ N/A				
7.4	Daily Pre-start meetings are being conducted in accordance with HY procedures				
	○ Pass ○ Fail ○ N/A				
7.5	Toolbox meetings are being conducted in accordance with HY procedures and the consultation statement				
	○ Pass ○ Fail ○ N/A				
7.6	Site HSE Committee Meetings are being conducted in accordance with HY procedures and the Consultation Statement				
	○ Pass ○ Fail ○ N/A				

8. INCIDENTS & EMERGENCY RESPONSE

Assign	ed to • (0/7)				
8.1	First aid facilities are established as per the COP				
	○ Pass ○ Fail ○ N/A				
8.2	Project Incident Register is established and up-to date				
	○ Pass ○ Fail ○ N/A				
8.3	Incidents are correctly categorised				
	○ Pass ○ Fail ○ N/A				
8.4	Incidents are closed out in a timely manner				
	○ Pass ○ Fail ○ N/A				
8.5	Emergency Response drills are scheduled and conducted				
	○ Pass ○ Fail ○ N/A				
	Description Emergency drills are to be conducted within 6 months of project start and at 6 monthly intervals thereafter. For projects with a duration 6 months must complete at least one (1) Emergency Response Drill.				
8.6	Emergency lighting is adequate				
	○ Pass ○ Fail ○ N/A				
8.7	Fire fighting equipment and signage is correctly located and servicing up to date				
	○ Pass ○ Fail ○ N/A				
9. WO	PRKING AT HEIGHTS				
Assign	ed to • (0/11)				
9.1	Is there a risk of a person falling 2 metres or more?				
	○ Yes ○ No ○ N/A				
9.2	Access to work areas includes approved access systems,				
	○ Pass ○ Fail ○ N/A				
9.3	Protection (handrail/fence/covers etc) is in place to protect people or material fall				
	○ Pass ○ Fail ○ N/A				
9.4	Fall protection equipment is signed off by a competent person

13. MOBILE PLANT

ed to • (0/14)				
Does the work involve powered mobile plant?				
○ Yes ○ No ○ N/A				
Site layout plan nominates plant entry/exit points and delivery areas and pedestrian access ways				
○ Pass ○ Fail ○ N/A				
Site layout ensures separation of people and plant (exclusion zones/jersey curb or fencing)				
○ Pass ○ Fail ○ N/A				
Plant verification reports are completed for all plant entering the site				
○ Pass ○ Fail ○ N/A				
Plant with attachments have quick hitch safety pins in place				
○ Pass ○ Fail ○ N/A				
Lifting equipment is tagged and certified				
○ Pass ○ Fail ○ N/A				
Required plant has been registered with the State WHS Regulator				
○ Pass ○ Fail ○ N/A				
Daily prestart inspection checklists are completed				
○ Pass ○ Fail ○ N/A				
SWL/WLL is displayed on appropriate plant				
○ Pass ○ Fail ○ N/A				
Spotters are used for relevant plant operation				
○ Pass ○ Fail ○ N/A				
Plant is operated within safe distance from live overhead power lines				
○ Pass ○ Fail ○ N/A				

13.12	Plant work areas are segregated and include appropriate signage				
	○ Pass ○ Fail ○ N/A				
13.13	Plant set-up permit system is in place				
	○ Pass ○ Fail ○ N/A				
13.14	Unused plant is parked in a safe location and ignition keys removed				
	○ Pass ○ Fail ○ N/A				
14. EX	CAVATION				
Assign	ed to • (0/9)				
14.1	Does work involve excavation to a depth greater than 1.5m or a tunnel				
	○ Yes ○ No ○ N/A				
14.2	Dial B4 U Dig plans are available on site with details of service locations				
	○ Pass ○ Fail ○ N/A				
	Description (Ensure issue date is 30 days)				
14.3	Groundworks Permit system is established and implemented				
	○ Pass ○ Fail ○ N/A				
14.4	Excavations/trenches are benched battered or shored				
	○ Pass ○ Fail ○ N/A				
14.5	Excavations/trenches are signed off by a Geotechnical Engineer				
	○ Pass ○ Fail ○ N/A				
14.6	Suitable barricading is installed around excavations/trenches				
	○ Pass ○ Fail ○ N/A				
14.7	Pits include metal pit covers				
	○ Pass ○ Fail ○ N/A				
14.8	Excavations/trenches contain suitable provision for access/egress				
	○ Pass ○ Fail ○ N/A				
14.9	Plant/vehicles and stock piling is outside the zone of influence				

15. PRE-CAST & TILT-UP CONCRETE

Assigne	ed to • (0/7)				
15.1	Work involves tilt-up and precast concrete				
	○ Yes ○ No ○ N/A				
15.2	Tilt up and precast audit report has been completed and supporting documentation provided				
	○ Pass ○ Fail ○ N/A				
15.3	Props are correctly fixed and secured				
	○ Pass ○ Fail ○ N/A				
15.4	Prop sizes are in accordance with design requirements				
	○ Pass ○ Fail ○ N/A				
15.5	Panel storage/stacking is adequate				
	○ Pass ○ Fail ○ N/A				
15.6	Exclusion zones are established around precast erection zones				
	○ Pass ○ Fail ○ N/A				
15.7	Crane capacity is suitable for panels				
	○ Pass ○ Fail ○ N/A				
16. DE	MOLITION				
Assigne	ed to • (0/8)				
16.1	Does the work involve demolition of a load bearing structure?				
	○ Yes ○ No ○ N/A				
16.2	Notification to WHS regulator provided				
	○ Pass ○ Fail ○ N/A				
16.3	Demolition plan has been established
