Richard Crookes Construction Level 3, 4 Broadcast Way Artarmon NSW 2064

Attention: Mr Thomas Price

Dear Tom,

RE: UPGRADES TO CHATSWOOD PUBLIC SCHOOL AND CHATSWOOD HIGH SCHOOL 2021 ON-STREET PARKING SURVEY
SUMMARY STATEMENT OF SURVEY RESULTS

Overview

On-street parking surveys were undertaken by TTPP in 2019 as part of the State Significant Development Application (SSDA) *Transport and Accessibility Impact Assessment* (TTPP, 23 March 2021) for the Upgrades to Chatswood Public School and Chatswood High School.

As part of the approved Construction Traffic & Pedestrian Management Sub-Plan (TTPP ref: 20182-r01v08-210420-CTPMSP dated 20 April 2021) updated on-street parking surveys of surrounding street were required to validate the 2019 surveys presented in the SSDA transport assessment and if necessary to development additional mitigation measures for identified additional impacts.

The following presents the findings of the 2021 on-street parking survey results and compares the results to the findings of the 2019 survey.

In undertaking the 2021 on-street parking surveys it is acknowledged that the surveys timing has been delayed as a result of COVID-19 and the potential for 'atypical' conditions. The 2021 surveys have been undertaken outside of general population lock down restrictions however it is unclear as to how the current school and commercial operation of the Chatswood CBD are still influenced by COVID -19.

On-street Parking Survey Summary

The 2019 on-street parking surveys were undertaken on Thursday 14 March 2019 between 7:00am and 5:30pm and Saturday 16 March 2019 between 10:00am and 4:00pm.

The extent of the survey area is shown in Attachment A.

The 2021 on-street parking surveys as presented herein were undertaken for the same study area on Tuesday 2 November 2021 between 7:00am and 5:30pm and Saturday 6 November 2021 between 10:00am and 5:00pm.

It is noted that changed on street parking restrictions within the study area have been implemented between the 2019 and 2021 and hence the total potential supply of parking spaces within the survey area has been reduced marginally. This change is reflected in the survey results.

A summary of the hourly car parking profiles during the 2019 weekday and weekend surveys are reproduced in Figure 1 and Figure 2 respectively while the hourly car parking profile summary for the 2021 weekday and weekend survey period is illustrated in Figure 3 and Figure 4 respectively.

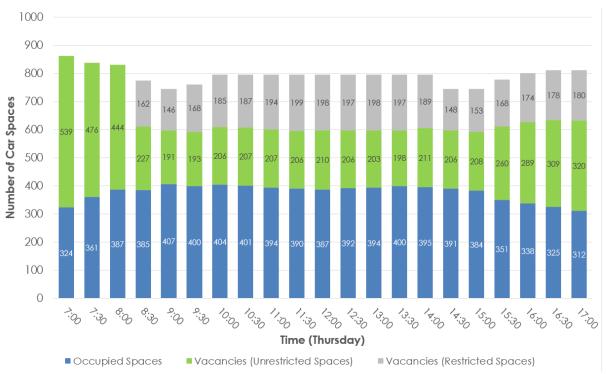

Figure 1: Thursday Weekday On-Street Parking Occupancy 2019

Note: The total parking supply varies throughout the day due to timed parking restrictions

1000 900 800 700 **Number of Car Spaces** 600 500 400 300 200 100 0 10:00 10:30 11:00 11:30 /4:00 /4:30 Time (Saturday) ■ Vacancies (Restricted Spaces) Occupied Spaces ■ Vacancies (Unrestricted Spaces)

Figure 2: Saturday Weekend On-Street Parking Occupancy 2019

Note: The total parking supply varies throughout the day due to timed parking restrictions

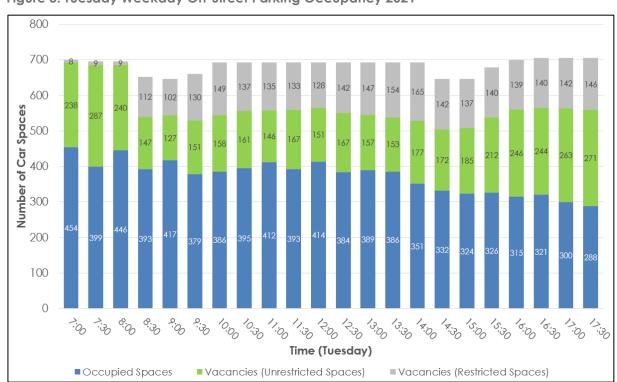

Figure 3: Tuesday Weekday On-Street Parking Occupancy 2021

Note: The total parking supply varies throughout the day due to timed parking restrictions

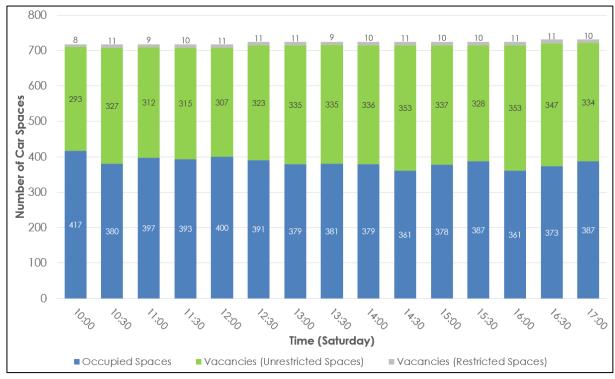

Figure 4: Saturday Weekend On-Street Parking Occupancy 2021

Note: The total parking supply varies throughout the day due to timed parking restrictions

As identified in the SSDA Transport Assessment, the 2019 parking surveys indicated that the peak parking accumulation occurred during the weekday at 9:00am with 407 parked vehicles, which is 55% of its capacity (337 remaining vacancies – 191 unrestricted and 146 restricted spaces). The weekday peak parking occupancy/demand occurred between 9:00am and 9:30am, which coincides with typical school morning drop-off periods.

The peak weekend parking accumulation occurred at 10:00am with 344 parked vehicles, which is 41% of its capacity.

Based on the 2021 parking surveys, the peak parking accumulation occurred during the weekday at 7:00am with 454 parked vehicles, which is 65% of its capacity (246 remaining vacancies – 238 unrestricted and 16 restricted spaces). However, it is noted that this identified peak occurs well before typical morning school drop-off peak which generally occurs 30 minutes to 1-hour prior to the school bell.

Notwithstanding the above, a comparison to the 2019 surveys indicates the 9:00am parking occupancy during the 2021 surveys shows a similar level of total parking accumulation with 417 parked vehicles, which is 65% of its capacity (229 remaining vacancies – 127 unrestricted and 102 restricted spaces).

It is noted that the total parking supply varies throughout the day due to time parking restrictions.

Furthermore, it is noted that the 2021 total parking supply within the study area has reduced from the total parking supply surveyed in 2019. This is due to changes in on-street parking restrictions observed on the surrounding streets. For example, the previous unrestricted car parking (approx. 32 spaces) on Eddy Road between Lone Pine Avenue to De Villers Avenue has been converted to No Parking 6:30am-6:00pm Monday – Friday.

Similarly, to the 2019 weekend survey, the 2021 peak weekend parking accumulation occurred at 10:00am with 417 parked vehicles, which is 58% of its capacity.

Conclusion

The 2021 on street parking surveys have indicated that the current (2021) on-street parking conditions surrounding the Chatswood Public School and Chatswood High School are similar to those surveyed in 2019.

As such the findings of the SSDA transport analysis and associated mitigation and management measures are considered to remain valid and appropriate for construction works associated with school's upgrade project.

Should you have any queries regarding the above or require further information, please do not hesitate to contact the undersigned on 8437 7800.

Yours sincerely,

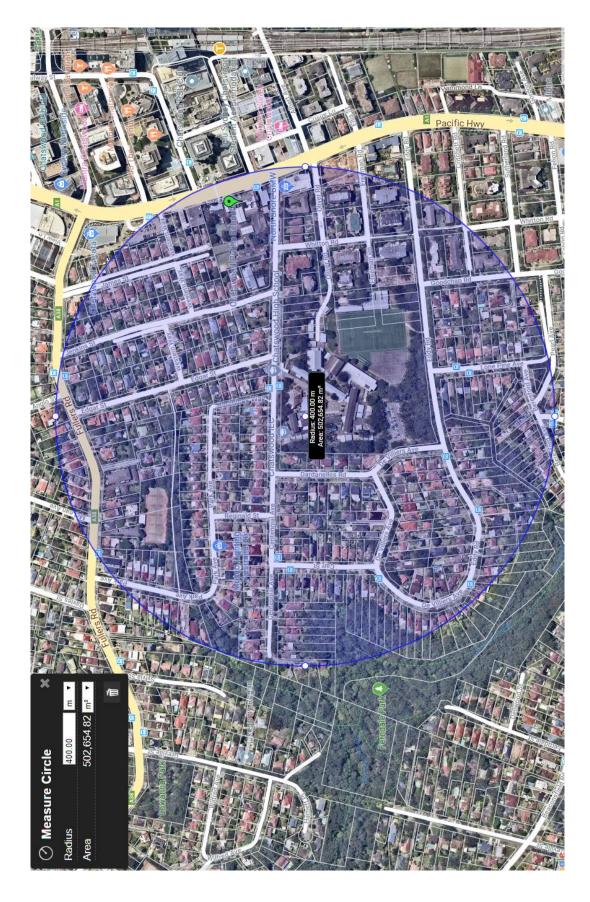

Jason Rudd Director
