

---

The RTS and the amended application for the above SSD project have been reviewed.

It is noted that the secondary water management facility has been removed in the amended application, and that an additional outcome of that action will result in no adverse impact to the 'Hallwood' potential heritage item. It is also noted that the amended plan includes groundwater investigation and a test bore identified as TB05, situated to the north of the mine footprint (within the Cabonne LGA).

Council has no additional comment or requirements of the amended development proposal, beyond those comments provided as part of the initial consultation phase.

Regards  
HJ Nicholls  
Acting General Manager  
Cabonne Council
