Dear Samantha,

Subject: Strontian Solar Farm (SSD-95743959) - Proposed change to PV Capacity

I am writing on behalf of Grupo Cobra, owner of Zero-E Services Pty Ltd, which in turn owns Strontian Solar Farm Pty Ltd (ABN 26 681 576 483) regarding a proposed change to the megawatt (MW) photovoltaic (PV) installed capacity of the Strontian Solar Farm (SSD-95743959).

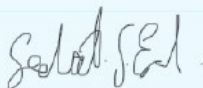

Since receiving the project SEARs for Strontian Solar Farm SSD-95743959, Grupo Cobra has undertaken further project refinements that have resulted in the following change:

- An increase in installed capacity to **392.6 MW (dc) / 334 MW (ac)** utility-scale solar PV array, previously **383.3 MW (dc) / 328 MW (ac)**.

The proposed change is contained entirely within the existing project site boundary and does not result in any additional land parcels. The increased PV capacity shall be fully assessed in accordance with the SEARs as part of the Environmental Impact Statement (EIS) and the accompanying technical assessments for the Project.

Ongoing project iterations and refinements may continue to occur as the Project design responds to Agency, community and stakeholder feedback, or the identification of constraints. Grupo Cobra is available to discuss the Project further, if required.

Yours faithfully,

Sedat Erol
Senior Development Manager
Grupo Cobra
