Subject: Sydney Metro West, Western Tunnelling - Request for Planning Secretary Agreement for the Application of Condition D71

Dear Mr Butler,

Thank you for submitting the 'Request for the Planning Secretary's Determination for the Application of Condition D71' dated 20 March 2025 in accordance with condition D71 of SSI 10038.

Sydney Metro has requested Planning Secretary agreement that a Detailed Site Investigation is not required for proposed installation of a new portable water line at Clyde Maintenance and Stabling Facility (MSF) construction site (as outlined in the request), in accordance with condition D71.

I note the request and supporting documentation outlines the proposed works are to be undertaken in two areas within the Clyde MSF site to facilitate the installation of a new portable water main. These areas have a moderate potential contamination risk as determined by the Environmental Impact Statement documentation of the planning approval.

I further note the utility works will result in the disturbance of moderate to high risk contaminated sites as identified in documents listed in Condition A1 of the Planning Approval. However, the request and supporting documentation sufficiently justifies that a DSI is not necessary for the proposed utility works as required by Condition D71, based on the adapted works methodology and adherence to relevant management plans, sub-plans and procedures.

As nominee of the Planning Secretary, I agree that a Detailed Site Investigation is not required for the proposed utility works (as described in the request), in accordance with Condition D71.

The project contactor is expected to manage any risks associated with the utility works in line with approved Construction Environmental Management Plans and sub-plans and relevant procedures including any Unexpected Finds Protocol.

If you wish to discuss the matter further, please contact Sifa KC at sifa.kc@dpie.nsw.gov.au.

Yours sincerely
