Pultenaea humilis Dwarf Bush-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Swainsona recta Small Purple-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Swainsona sericea Silky Swainson-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Synemon plana Golden Sun Moth	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Tyto novaehollandiae Masked Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Zieria obcordata Granite Zieria	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Threatened species Manually Added

None added

Threatened species assessed as not on site

Refer to BAR for detailed justification

Common name	Scientific name	Justification in the BAM-C
Booroolong Frog	Litoria booroolongensis	Refer to BAR
Brush-tailed Phascogale	Phascogale tapoatafa	Geographic limitations
Brush-tailed Rock-wallaby	Petrogale penicillata	Refer to BAR
Grey-headed Flying-fox	Pteropus poliocephalus	Refer to BAR
Large Bent-winged Bat	Miniopterus orianae oceanensis	Refer to BAR
Large-eared Pied Bat	Chalinolobus dwyeri	Refer to BAR
Regent Honeyeater	Anthochaera phrygia	Refer to BAR
Swift Parrot	Lathamus discolor	Refer to BAR

BAM Credit Summary Report

Proposal Details

Assessment Id
00029440/BAAS17040/21/00029446

Proposal Name
6699 Humelink Assessment - Inland Slopes

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Report Created
18/08/2023

BAM Data version *
61

Assessor Number
BAAS17040

BAM Case Status
Finalised

Date Finalised
18/08/2023

Assessment Revision
5

Assessment Type
Major Projects

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Ecosystem credits for plant communities types (PCT), ecological communities & threatened species habitat

Zone	Vegetation zone name	TEC name	Current Vegetation integrity score	Change in Vegetation integrity (loss / gain)	Area (ha)	Sensitivity to loss (Justification)	Species sensitivity to gain class	BC Act Listing status	EPBC Act listing status	Biodiversity risk weighting	Potential SAII	Ecosystem credits

Threatened species reliably predicted to utilise the site. No surveys are required for these species. Ecosystem credits apply to these species.

Common Name	Scientific Name	Vegetation Types(s)
Australian Painted Snipe	Rostratula australis	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
Barking Owl	Ninox connivens	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Black Falcon	Falco subniger	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.

Black Falcon	Falco subniger	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Black-chinned Honeyeater (eastern subspecies)	Melithreptus gularis gularis	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Brown Treecreeper (eastern subspecies)	Climacteris picumnus victoriae	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Corben's Long-eared Bat	Nyctophilus corbeni	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
Diamond Firetail	Stagonopleura guttata	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion

Dusky Woodswallow	Artamus cyanopterus cyanopterus	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Eastern False Pipistrelle	Falsistrellus tasmaniensis	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Flame Robin	Petroica phoenicea	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Freckled Duck	Stictonetta naevosa	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
Gang-gang Cockatoo	Callocephalon fimbriatum	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.

Gang-gang Cockatoo	Callocephalon fimbriatum	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Gilbert's Whistler	Pachycephala inornata	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
Glossy Black-Cockatoo	Calyptorhynchus lathami	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
Grey-crowned Babbler (eastern subspecies)	Pomatostomus temporalis temporalis	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Grey-headed Flying-fox	Pteropus poliocephalus	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Large Bent-winged Bat	Miniopterus orianae oceanensis	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion

Large Bent-winged Bat	Miniopterus orianae oceanensis	277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Little Eagle	Hieraaetus morphnoides	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Little Lorikeet	Glossopsitta pusilla	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Little Pied Bat	Chalinolobus picatus	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
Masked Owl	Tyto novaehollandiae	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Painted Honeyeater	Grantiella picta	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion

Painted Honeyeater	Grantiella picta	268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Powerful Owl	Ninox strenua	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
Purple-crowned Lorikeet	Glossopsitta porphyrocephala	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
Regent Honeyeater	Anthochaera phrygia	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Rosenberg's Goanna	Varanus rosenbergi	268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
Scarlet Robin	Petroica boodang	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion

Scarlet Robin	Petroica boodang	277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Speckled Warbler	Chthonicola sagittata	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Spotted Harrier	Circus assimilis	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Spotted-tailed Quoll	Dasyurus maculatus	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Square-tailed Kite	Lophoictinia isura	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion

Square-tailed Kite	Lophoictinia isura	277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Superb Parrot	Polytelis swainsonii	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Swift Parrot	Lathamus discolor	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Turquoise Parrot	Neophema pulchella	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Varied Sittella	Daphoenositta chrysoptera	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion

Varied Sittella	Daphoenositta chrysoptera	268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
White-bellied Sea-Eagle	Haliaeetus leucogaster	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
White-throated Needletail	Hirundapus caudacutus	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		268-White Box - Blakely's Red Gum - Long-leaved Box - Nortons Box - Red Stringybark grass-shrub woodland on shallow soils on hills in the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion
Yellow-bellied Sheathtail-bat	Saccolaimus flaviventris	5-River Red Gum herbaceous-grassy very tall open forest wetland on inner floodplains in the lower slopes sub-region of the NSW South Western Slopes Bioregion and the eastern Riverina Bioregion.
		266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		277-Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion

Proposal Details

Assessment Id
00029440/BAAS17040/23/00038907

Proposal Name
6699 Humelink Assessment - Inland Slopes 2

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Assessor Number
BAAS17040

BAM Data version *
61

Proponent Name(s)
Jack McGovern

Report Created
18/08/2023

BAM Case Status
Finalised

Assessment Revision
0

Assessment Type
Major Projects

Date Finalised
18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion

Coolac-Tumut Serpentinite Shrubby Woodland in the NSW South Western Slopes and South Eastern Highlands Bioregions	Endangered Ecological Community	301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt

Species
Acacia phasmoides / Phantom Wattle
Eucalyptus alligatrix subsp. alligatrix / Eucalyptus alligatrix subsp. alligatrix
Caladenia concolor / Crimson Spider Orchid
Grevillea wilkinsonii / Tumut Grevillea
Zieria obcordata / Granite Zieria
Euphrasia arguta / Euphrasia arguta

	Ammobium craspedioides/Yass Daisy	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Aprasia parapulchella/ Pink-tailed Legless Lizard	Spp	IBRA region	
	Aprasia parapulchella/Pink-tailed Legless Lizard	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Burhinus grallarius/ Bush Stone-curlew	Spp		IBRA region
	Burhinus grallarius/Bush Stone-curlew		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Caesia parviflora var. minor/ Small Pale Grass-lily	Spp		IBRA region
	Caesia parviflora var. minor/Small Pale Grass-lily		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Caladenia concolor/ Crimson Spider Orchid	Spp	IBRA region	
	Caladenia concolor/Crimson Spider Orchid	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Callocephalon fimbriatum/ Gang-gang Cockatoo	Spp		IBRA region
	Callocephalon fimbriatum/Gang-gang Cockatoo		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Calyptorhynchus lathami/ Glossy Black-Cockatoo	Spp		IBRA region
	Calyptorhynchus lathami/Glossy Black-Cockatoo		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Cercartetus nanus/ Eastern Pygmy-possum	Spp	IBRA region	
	Cercartetus nanus/Eastern Pygmy-possum	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Eucalyptus alligatrix subsp. alligatrix/ Eucalyptus alligatrix subsp. alligatrix	Spp		IBRA region
	Eucalyptus alligatrix subsp. alligatrix/Eucalyptus alligatrix subsp. alligatrix		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Eucalyptus cannonii/ Capertee Stringybark	Spp		IBRA region
	Eucalyptus cannonii/Capertee Stringybark		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Euphrasia arguta/ Euphrasia arguta	Spp	IBRA region
	Euphrasia arguta/Euphrasia arguta *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW
Grevillea wilkinsonii/ Tumut Grevillea	Spp	IBRA region
	Grevillea wilkinsonii/Tumut Grevillea *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW
Haliaeetus leucogaster/ White-bellied Sea-Eagle	Spp	IBRA region
	Haliaeetus leucogaster/White-bellied Sea-Eagle	Any in NSW
	Variation options	

Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act	IBRA region

		shown below	
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Hieraaetus morphnoides/ Little Eagle	Spp	IBRA region	
	Hieraaetus morphnoides/Little Eagle	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Keyacris scurra/ Key's Matchstick Grasshopper	Spp		IBRA region
	Keyacris scurra/Key's Matchstick Grasshopper		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Lophoictinia isura/ Square-tailed Kite	Spp		IBRA region
	Lophoictinia isura/Square-tailed Kite		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Ninox connivens/ Barking Owl	Spp	IBRA region	
	Ninox connivens/Barking Owl	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Ninox strenua/ Powerful Owl	Spp		IBRA region
	Ninox strenua/Powerful Owl		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Persoonia marginata/ Clandulla Geebung	Spp		IBRA region
	Persoonia marginata/Clandulla Geebung		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Petaurus norfolcensis/ Squirrel Glider	Spp	IBRA region	
	Petaurus norfolcensis/Squirrel Glider	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Petaurus norfolcensis - endangered population/ Squirrel Glider in the Wagga Wagga Local Government Area	Spp		IBRA region
	Petaurus norfolcensis - endangered population/Squirrel Glider in the Wagga Wagga Local Government Area		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered Population	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Petroica rodinogaster/ Pink Robin	Spp		IBRA region
	Petroica rodinogaster/Pink Robin		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Phascolarctos cinereus/ Koala	Spp	IBRA region	
	Phascolarctos cinereus/Koala	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Polytelis swainsonii/ Superb Parrot	Spp		IBRA region
	Polytelis swainsonii/Superb Parrot		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Pultenaea humilis/ Dwarf Bush-pea	Spp		IBRA region
	Pultenaea humilis/Dwarf Bush-pea		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Senecio garlandii/ Woolly Ragwort	Spp	IBRA region	
	Senecio garlandii/Woolly Ragwort	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Swainsona sericea/ Silky Swainson-pea	Spp		IBRA region
	Swainsona sericea/Silky Swainson-pea		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Synemon plana/ Golden Sun Moth	Spp		IBRA region
	Synemon plana/Golden Sun Moth		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Tyto novaehollandiae/ Masked Owl	Spp	IBRA region	
	Tyto novaehollandiae/Masked Owl	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Zieria obcordata/ Granite Zieria	Spp		IBRA region
	Zieria obcordata/Granite Zieria		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
Coolac-Tumut Serpentinite Shrubby Woodland in the NSW South Western Slopes and South Eastern Highlands Bioregions	Endangered Ecological Community	301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt

Species
Acacia phasmoides / Phantom Wattle
Eucalyptus alligatrix subsp. alligatrix / Eucalyptus alligatrix subsp. alligatrix
Caladenia concolor / Crimson Spider Orchid
Grevillea wilkinsonii / Tumut Grevillea
Zieria obcordata / Granite Zieria
Euphrasia arguta / Euphrasia arguta

Credit Retirement Options

Like-for-like credit retirement options

Acacia phasmoides / Phantom Wattle	Spp	IBRA subregion
	Acacia phasmoides / Phantom Wattle	Any in NSW

Ammobium craspedioides / Yass Daisy	Spp	IBRA subregion
	Ammobium craspedioides / Yass Daisy	Any in NSW
Aprasia parapulchella / Pink-tailed Legless Lizard	Spp	IBRA subregion
	Aprasia parapulchella / Pink-tailed Legless Lizard	Any in NSW
Burhinus grallarius / Bush Stone-curlew	Spp	IBRA subregion
	Burhinus grallarius / Bush Stone-curlew	Any in NSW
Caesia parviflora var. minor / Small Pale Grass-lily	Spp	IBRA subregion
	Caesia parviflora var. minor / Small Pale Grass-lily	Any in NSW
Caladenia concolor / Crimson Spider Orchid	Spp	IBRA subregion
	Caladenia concolor / Crimson Spider Orchid	Any in NSW
Callocephalon fimbriatum / Gang-gang Cockatoo	Spp	IBRA subregion
	Callocephalon fimbriatum / Gang-gang Cockatoo	Any in NSW
Calyptorhynchus lathami / Glossy Black-Cockatoo	Spp	IBRA subregion

	Calyptorhynchus lathami / Glossy Black-Cockatoo	Any in NSW
Cercartetus nanus / Eastern Pygmy-possum	Spp	IBRA subregion
	Cercartetus nanus / Eastern Pygmy-possum	Any in NSW
Eucalyptus alligatrix subsp. alligatrix / Eucalyptus alligatrix subsp. alligatrix	Spp	IBRA subregion
	Eucalyptus alligatrix subsp. alligatrix / Eucalyptus alligatrix subsp. alligatrix	Any in NSW
Eucalyptus cannonii / Capertee Stringybark	Spp	IBRA subregion
	Eucalyptus cannonii / Capertee Stringybark	Any in NSW
Euphrasia arguta / Euphrasia arguta	Spp	IBRA subregion
	Euphrasia arguta / Euphrasia arguta	Any in NSW
Grevillea wilkinsonii / Tumut Grevillea	Spp	IBRA subregion
	Grevillea wilkinsonii / Tumut Grevillea	Any in NSW
Haliaeetus leucogaster / White-bellied Sea-Eagle	Spp	IBRA subregion
	Haliaeetus leucogaster / White-bellied Sea-Eagle	Any in NSW

Hieraaetus morphnoides / Little Eagle	Spp	IBRA subregion
	Hieraaetus morphnoides / Little Eagle	Any in NSW
Keyacris scurra / Key's Matchstick Grasshopper	Spp	IBRA subregion
	Keyacris scurra / Key's Matchstick Grasshopper	Any in NSW
Lophoictinia isura / Square-tailed Kite	Spp	IBRA subregion
	Lophoictinia isura / Square-tailed Kite	Any in NSW
Ninox connivens / Barking Owl	Spp	IBRA subregion
	Ninox connivens / Barking Owl	Any in NSW
Ninox strenua / Powerful Owl	Spp	IBRA subregion
	Ninox strenua / Powerful Owl	Any in NSW
Persoonia marginata / Clandulla Geebung	Spp	IBRA subregion
	Persoonia marginata / Clandulla Geebung	Any in NSW
Petaurus norfolcensis / Squirrel Glider	Spp	IBRA subregion

	Petaurus norfolcensis / Squirrel Glider	Any in NSW
Petaurus norfolcensis - endangered population / Squirrel Glider in the Wagga Wagga Local Government Area	Spp	IBRA subregion
	Petaurus norfolcensis - endangered population / Squirrel Glider in the Wagga Wagga Local Government Area	Any in NSW
Petroica rodinogaster / Pink Robin	Spp	IBRA subregion
	Petroica rodinogaster / Pink Robin	Any in NSW
Phascolarctos cinereus / Koala	Spp	IBRA subregion
	Phascolarctos cinereus / Koala	Any in NSW
Polytelis swainsonii / Superb Parrot	Spp	IBRA subregion
	Polytelis swainsonii / Superb Parrot	Any in NSW
Pultenaea humilis / Dwarf Bush-pea	Spp	IBRA subregion
	Pultenaea humilis / Dwarf Bush-pea	Any in NSW
Senecio garlandii / Woolly Ragwort	Spp	IBRA subregion
	Senecio garlandii / Woolly Ragwort	Any in NSW

Swainsona sericea / Silky Swainson-pea	Spp	IBRA subregion
	Swainsona sericea / Silky Swainson-pea	Any in NSW
Synemon plana / Golden Sun Moth	Spp	IBRA subregion
	Synemon plana / Golden Sun Moth	Any in NSW
Tyto novaehollandiae / Masked Owl	Spp	IBRA subregion
	Tyto novaehollandiae / Masked Owl	Any in NSW
Zieria obcordata / Granite Zieria	Spp	IBRA subregion
	Zieria obcordata / Granite Zieria	Any in NSW

List of Species Requiring Survey

Name	Presence	Survey Months
Acacia phasmoides Phantom Wattle	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ammobium craspedioides Yass Daisy	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Aprasia parapulchella Pink-tailed Legless Lizard	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Burhinus grallarius Bush Stone-curlew	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Caesia parviflora var. minor Small Pale Grass-lily	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Caladenia concolor Crimson Spider Orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Callocephalon fimbriatum Gang-gang Cockatoo	Yes (surveyed)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☑ Dec ☐ Survey month outside the specified months?
Calyptorhynchus lathami Glossy Black-Cockatoo	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Cercartetus nanus Eastern Pygmy-possum	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Eucalyptus alligatrix subsp. alligatrix Eucalyptus alligatrix subsp. alligatrix	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Eucalyptus cannonii Capertee Stringybark	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Euphrasia arguta Euphrasia arguta	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Grevillea wilkinsonii Tumut Grevillea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Haliaeetus leucogaster White-bellied Sea-Eagle	Yes (surveyed)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☑ Dec ☐ Survey month outside the specified months?
Hieraaetus morphnoides Little Eagle	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Keyacris scurra Key's Matchstick Grasshopper	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Lophoictinia isura Square-tailed Kite	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ninox connivens Barking Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ninox strenua Powerful Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Persoonia marginata Clandulla Geebung	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petaurus norfolcensis Squirrel Glider	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

***Petaurus norfolcensis* - endangered population** Squirrel Glider in the Wagga Wagga Local Government Area	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petroica rodinogaster Pink Robin	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Phascolarctos cinereus Koala	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Polytelis swainsonii Superb Parrot	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Pultenaea humilis Dwarf Bush-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Senecio garlandii Woolly Ragwort	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Swainsona recta Small Purple-pea	No (expert report)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Swainsona sericea Silky Swainson-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Synemon plana Golden Sun Moth	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Tyto novaehollandiae Masked Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Zieria obcordata Granite Zieria	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Threatened species Manually Added

Common Name	Scientific Name
Golden Sun Moth	Synemon plana

Threatened species assessed as not on site

Refer to BAR for detailed justification

BAM Candidate Species Report

Common name	Scientific name	Justification in the BAM-C
Booroolong Frog	Litoria booroolongensis	Refer to BAR
Brush-tailed Phascogale	Phascogale tapoatafa	Geographic limitations
Brush-tailed Rock-wallaby	Petrogale penicillata	Refer to BAR
Grey-headed Flying-fox	Pteropus poliocephalus	Refer to BAR
Large Bent-winged Bat	Miniopterus orianae oceanensis	Refer to BAR
Regent Honeyeater	Anthochaera phrygia	Refer to BAR
Southern Greater Glider	Petauroides volans	Refer to BAR
Southern Myotis	Myotis macropus	Refer to BAR
Swift Parrot	Lathamus discolor	Refer to BAR

00029440/BAAS17040/23/00038907	6699 Humelink Assessment - Inland Slopes 2	22/06/2023
Assessor Name	**Report Created**	**BAM Data version ***
Simon Tweed	18/08/2023	61
Assessor Number	**Assessment Type**	**BAM Case Status**
BAAS17040	Major Projects	Finalised
Assessment Revision		**Date Finalised**
0		18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Threatened species reliably predicted to utilise the site. No surveys are required for these species. Ecosystem credits apply to these species.

Common Name	Scientific Name	Vegetation Types(s)
Barking Owl	Ninox connivens	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
Black Falcon	Falco subniger	287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
Black-chinned Honeyeater (eastern subspecies)	Melithreptus gularis gularis	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

Black-chinned Honeyeater (eastern subspecies)	Melithreptus gularis gularis	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
Brown Treecreeper (eastern subspecies)	Climacteris picumnus victoriae	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
Diamond Firetail	Stagonopleura guttata	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion

Diamond Firetail	Stagonopleura guttata	297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Dusky Woodswallow	Artamus cyanopterus cyanopterus	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Eastern False Pipistrelle	Falsistrellus tasmaniensis	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion

Eastern False Pipistrelle	Falsistrellus tasmaniensis	290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Flame Robin	Petroica phoenicea	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Gang-gang Cockatoo	Callocephalon fimbriatum	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

Gang-gang Cockatoo	Callocephalon fimbriatum	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Glossy Black-Cockatoo	Calyptorhynchus lathami	290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
Grey-crowned Babbler (eastern subspecies)	Pomatostomus temporalis temporalis	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
Grey-headed Flying-fox	Pteropus poliocephalus	287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion

Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
Large Bent-winged Bat	Miniopterus orianae oceanensis	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Little Eagle	Hieraaetus morphnoides	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion

Little Eagle	Hieraaetus morphnoides	294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Little Lorikeet	Glossopsitta pusilla	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
Little Pied Bat	Chalinolobus picatus	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
Masked Owl	Tyto novaehollandiae	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion

New Holland Mouse	Pseudomys novaehollandiae	290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
Painted Honeyeater	Grantiella picta	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
Powerful Owl	Ninox strenua	287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
Regent Honeyeater	Anthochaera phrygia	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
Rosenberg's Goanna	Varanus rosenbergi	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

Rosenberg's Goanna	Varanus rosenbergi	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Scarlet Robin	Petroica boodang	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Speckled Warbler	Chthonicola sagittata	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

Speckled Warbler	Chthonicola sagittata	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
Spotted Harrier	Circus assimilis	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
Spotted-tailed Quoll	Dasyurus maculatus	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion

Square-tailed Kite	Lophoictinia isura	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
Superb Parrot	Polytelis swainsonii	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
Swift Parrot	Lathamus discolor	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion

Swift Parrot	Lathamus discolor	299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Turquoise Parrot	Neophema pulchella	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
Varied Sittella	Daphoenositta chrysoptera	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion

Varied Sittella	Daphoenositta chrysoptera	299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
White-bellied Sea-Eagle	Haliaeetus leucogaster	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
White-throated Needletail	Hirundapus caudacutus	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion

White-throated Needletail	Hirundapus caudacutus	290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion
		294-Nortons Box - Red Box - White Box tussock grass open forest of the southern section of the NSW South Western Slopes Bioregion
		297-Broad-leaved Peppermint - Nortons Box - Red Stringybark tall open forest on red clay on hills in the southern part of the NSW South Western Slopes Bioregion
		299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		301-Drooping Sheoke - Ricinocarpus bowmannii - grasstree tall open shrubland of the Coolac - Tumut Serpentinite Belt
Yellow-bellied Glider	Petaurus australis	299-Riparian Ribbon Gum - Robertsons Peppermint - Apple Box riverine very tall open forest of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Yellow-bellied Sheathtail-bat	Saccolaimus flaviventris	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		290-Red Stringybark - Red Box - Long-leaved Box - Inland Scribbly Gum tussock grass - shrub low open forest on hills in the southern part of the NSW South Western Slopes Bioregion

Threatened species Manually Added

None added

Threatened species assessed as not within the vegetation zone(s) for the PCT(s)

Refer to BAR for detailed justification

Proposal Details

Assessment Id
00029440/BAAS17040/23/00038907

Assessment name
6699 Humelink Assessment - Inland Slopes 2

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Report Created
18/08/2023

BAM Data version *
61

Assessor Number
BAAS17040

Assessment Type
Major Projects

BAM Case Status
Finalised

Assessment Revision
0

Date Finalised
18/08/2023

BAM Biodiversity Credit Report (Variations)

Proposal Details

Assessment Id
00029440/BAAS17040/23/00038942

Proposal Name
6699 Humelink Assessment - Inland Slopes - 3

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Assessor Number
BAAS17040

BAM Data version *
61

Proponent Name(s)
Jack McGovern

Report Created
18/08/2023

BAM Case Status
Finalised

Assessment Revision
0

Assessment Type
Major Projects

Date Finalised
18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion

Species
Nil

Additional Information for Approval

PCT Outside Ibra Added

None added

PCTs With Customized Benchmarks

PCT
No Changes

Predicted Threatened Species Not On Site

Name
No Changes

Ecosystem Credit Summary (Number and class of biodiversity credits to be retired)

Name of Plant Community Type/ID	Name of threatened ecological community	Area of impact	HBT Cr	No HBT Cr	Total credits to be retired
306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region	Not a TEC	6.7	34	24	58.00
314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region	Not a TEC	23.5	393	0	393.00
316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region	Not a TEC	12.9	254	38	292.00
319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion	Not a TEC	1.3	16	6	22.00
343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion	Not a TEC	5.7	50	1	51.00

352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	4.2	11	0	11.00
731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion	Not a TEC	1.4	0	14	14.00
1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion	Not a TEC	0.1	3	0	3.00

306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region

	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Polytelis swainsonii/ Superb Parrot	Spp		IBRA region
	Polytelis swainsonii/Superb Parrot		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Prasophyllum petilum/ Tarengo Leek Orchid	Spp		IBRA region
	Prasophyllum petilum/Tarengo Leek Orchid		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Endangered	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Pultenaea humilis/ Dwarf Bush-pea	Spp	IBRA region	
	Pultenaea humilis/Dwarf Bush-pea	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Swainsona sericea/ Silky Swainson-pea	Spp		IBRA region
	Swainsona sericea/Silky Swainson-pea		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Inland Slopes, Bogan-Macquarie, Bondo, Capertee Uplands, Capertee Valley, Crookwell, Hill End, Kerrabee, Lower Slopes, Murray Fans, Murrumbateman, Orange, Pilliga, Talbragar Valley and Wollemi. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

Proposal Details

Assessment Id
00029440/BAAS17040/23/00038942

Proposal Name
6699 Humelink Assessment - Inland Slopes - 3

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Assessor Number
BAAS17040

BAM Data version *
61

Proponent Names
Jack McGovern

Report Created
18/08/2023

BAM Case Status
Finalised

Assessment Revision
0

Assessment Type
Major Projects

Date Finalised
18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Species		

Nil

List of Species Requiring Survey

Name	Presence	Survey Months
Ammobium craspedioides Yass Daisy	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Aprasia parapulchella Pink-tailed Legless Lizard	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Burhinus grallarius Bush Stone-curlew	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Callocephalon fimbriatum Gang-gang Cockatoo	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☑ Mar ☑ Apr ☐ May ☐ Jun ☑ Jul ☑ Aug ☐ Sep ☑ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Calyptorhynchus lathami Glossy Black-Cockatoo	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Cercartetus nanus Eastern Pygmy-possum	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Diuris tricolor Pine Donkey Orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Eucalyptus aggregata Black Gum	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Haliaeetus leucogaster White-bellied Sea-Eagle	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Hieraaetus morphnoides Little Eagle	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Leucochrysum albicans subsp. tricolor Hoary Sunray	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Lophoictinia isura Square-tailed Kite	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ninox connivens Barking Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ninox strenua Powerful Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petauroides volans Southern Greater Glider	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Petaurus norfolcensis Squirrel Glider	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petaurus norfolcensis - endangered population Squirrel Glider in the Wagga Wagga Local Government Area	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Phascolarctos cinereus Koala	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Polytelis swainsonii Superb Parrot	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Prasophyllum petilum Tarengo Leek Orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Pultenaea humilis Dwarf Bush-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Senecio garlandii Woolly Ragwort	No (expert report)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Swainsona sericea Silky Swainson-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Threatened species Manually Added

None added

Threatened species assessed as not on site

Refer to BAR for detailed justification

Common name	Scientific name	Justification in the BAM-C
Booroolong Frog	Litoria booroolongensis	Refer to BAR
Brush-tailed Phascogale	Phascogale tapoatafa	Geographic limitations
Brush-tailed Rock-wallaby	Petrogale penicillata	Refer to BAR
Golden Sun Moth	Synemon plana	Geographic limitations
Grey-headed Flying-fox	Pteropus poliocephalus	Habitat constraints
Large Bent-winged Bat	Miniopterus orianae oceanensis	Habitat constraints
Large-eared Pied Bat	Chalinolobus dwyeri	Refer to BAR
Masked Owl	Tyto novaehollandiae	Refer to BAR
Pink Robin	Petroica rodinogaster	Refer to BAR
Regent Honeyeater	Anthochaera phrygia	Refer to BAR
Robertson's Peppermint	Eucalyptus robertsonii subsp. hemisphaerica	Refer to BAR
Southern Myotis	Myotis macropus	Refer to BAR
Swift Parrot	Lathamus discolor	Refer to BAR

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Threatened species reliably predicted to utilise the site. No surveys are required for these species. Ecosystem credits apply to these species.

Common Name	Scientific Name	Vegetation Types(s)
Barking Owl	Ninox connivens	314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion

Black Falcon	Falco subniger	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Black-chinned Honeyeater (eastern subspecies)	Melithreptus gularis gularis	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
Brown Treecreeper (eastern subspecies)	Climacteris picumnus victoriae	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Diamond Firetail	Stagonopleura guttata	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region

Diamond Firetail	Stagonopleura guttata	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Dusky Woodswallow	Artamus cyanopterus cyanopterus	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Eastern False Pipistrelle	Falsistrellus tasmaniensis	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region

Eastern False Pipistrelle	Falsistrellus tasmaniensis	316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Flame Robin	Petroica phoenicea	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Gang-gang Cockatoo	Callocephalon fimbriatum	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region

Gang-gang Cockatoo	Callocephalon fimbriatum	343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Glossy Black-Cockatoo	Calyptorhynchus lathami	343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Grey-crowned Babbler (eastern subspecies)	Pomatostomus temporalis temporalis	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
Grey-headed Flying-fox	Pteropus poliocephalus	731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion

Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Large Bent-winged Bat	Miniopterus orianae oceanensis	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Little Eagle	Hieraaetus morphnoides	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion

Little Eagle	Hieraaetus morphnoides	1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Little Lorikeet	Glossopsitta pusilla	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Malleefowl	Leipoa ocellata	343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
Masked Owl	Tyto novaehollandiae	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Painted Honeyeater	Grantiella picta	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion

Painted Honeyeater	Grantiella picta	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
Powerful Owl	Ninox strenua	314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Regent Honeyeater	Anthochaera phrygia	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Rosenberg's Goanna	Varanus rosenbergi	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion

Rosenberg's Goanna	Varanus rosenbergi	731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Scarlet Robin	Petroica boodang	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Speckled Warbler	Chthonicola sagittata	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion

Speckled Warbler	Chthonicola sagittata	1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Spotted Harrier	Circus assimilis	1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Spotted-tailed Quoll	Dasyurus maculatus	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Square-tailed Kite	Lophoictinia isura	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
Superb Parrot	Polytelis swainsonii	343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
Swift Parrot	Lathamus discolor	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region

Swift Parrot	Lathamus discolor	314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
Turquoise Parrot	Neophema pulchella	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Varied Sittella	Daphoenositta chrysoptera	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region

Varied Sittella	Daphoenositta chrysoptera	319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
White-bellied Sea-Eagle	Haliaeetus leucogaster	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region
		316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
White-throated Needletail	Hirundapus caudacutus	306-Red Box - Red Stringybark - Nortons Box hill heath shrub - tussock grass open forest of the Tumut region
		314-Apple Box - Red Stringybark basalt scree open forest in the upper Murray River region

White-throated Needletail	Hirundapus caudacutus	316-Nortons Box - Red Box - Red Stringybark +/- Nodding Flax Lily forb-grass open forest mainly on the Tumut region
		319-Tumbledown Red Gum - White Cypress Pine hill woodland in the southern part of the NSW South Western Slopes Bioregion
		343-Mugga Ironbark - Red Box - Red Stringybark - Western Grey Box grass/shrub woodland on metamorphic substrates in the Tarcutta - Gundagai region, NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Yellow-bellied Glider	Petaurus australis	731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1191-Snow Gum - Candle Bark woodland on broad valley flats of the tablelands and slopes, South Eastern Highlands Bioregion
Yellow-bellied Sheathtail-bat	Saccolaimus flaviventris	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion

Threatened species Manually Added

None added

Threatened species assessed as not within the vegetation zone(s) for the PCT(s)

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	Critically Endangered Ecological Community	1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion

Species
Grevillea iaspicula / Wee Jasper Grevillea
Miniopterus orianae oceanensis / Large Bent-winged Bat
Caladenia concolor / Crimson Spider Orchid
Pomaderris pallida / Pale Pomaderris

Ecosystem Credit Summary (Number and class of biodiversity credits to be retired)

Name of Plant Community Type/ID	Name of threatened ecological community	Area of impact	HBT Cr	No HBT Cr	Total credits to be retired
266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	3.0	8	0	8.00
278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	0.1	0	0	0.00
280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	13.6	61	34	95.00

283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	1.6	0	49	49.00
287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion	Not a TEC	1.2	21	0	21.00
322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes	Not a TEC	0.5	14	0	14.00
349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion	Not a TEC	3.0	0	46	46.00
351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion	Not a TEC	3.5	71	0	71.00
352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	3.5	35	0	35.00
731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion	Not a TEC	0.5	15	0	15.00

1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion	Not a TEC	12.9	329	10	339.00
1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	54.8	542	374	916.00

266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion

Like-for-like options

Ammobium craspedioides/ Yass Daisy	Spp		IBRA region
	Ammobium craspedioides/Yass Daisy		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Aprasia parapulchella/ Pink-tailed Legless Lizard	Spp	IBRA region	
	Aprasia parapulchella/Pink-tailed Legless Lizard	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Caladenia concolor/ Crimson Spider Orchid	Spp	IBRA region	
	Caladenia concolor/Crimson Spider Orchid	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing	IBRA region

		under Part 4 of the BC Act shown below	
	Flora	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Callocephalon fimbriatum/ Gang-gang Cockatoo	Spp	IBRA region	
	Callocephalon fimbriatum/Gang-gang Cockatoo	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Calyptorhynchus lathami/ Glossy Black-Cockatoo	Spp	IBRA region	
	Calyptorhynchus lathami/Glossy Black-Cockatoo	Any in NSW	
	Variation options		

	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Cercartetus nanus/ Eastern Pygmy-possum	Spp	IBRA region	
	Cercartetus nanus/Eastern Pygmy-possum	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Delma impar/ Striped Legless Lizard	Spp	IBRA region	

	Delma impar/Striped Legless Lizard	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Grevillea iaspicula/ Wee Jasper Grevillea	Spp	IBRA region	
	Grevillea iaspicula/Wee Jasper Grevillea *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW	
Haliaeetus leucogaster/ White-bellied Sea-Eagle	Spp	IBRA region	
	Haliaeetus leucogaster/White-bellied Sea-Eagle	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Hieraaetus morphnoides/ Little Eagle	Spp	IBRA region	
	Hieraaetus morphnoides/Little Eagle	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Keyacris scurra/ Key's Matchstick Grasshopper	Spp	IBRA region	
	Keyacris scurra/Key's Matchstick Grasshopper	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing	IBRA region

		under Part 4 of the BC Act shown below	
	Fauna	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Leucochrysum albicans subsp. tricolor/ Hoary Sunray	Spp	IBRA region	
	Leucochrysum albicans subsp. tricolor/Hoary Sunray	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Lophoictinia isura/ Square-tailed Kite	Spp	IBRA region	
	Lophoictinia isura/Square-tailed Kite	Any in NSW	
	Variation options		

	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Miniopterus orianae oceanensis/ Large Bent-winged Bat	Spp	IBRA region	
	Miniopterus orianae oceanensis/Large Bent-winged Bat	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Myotis macropus/ Southern Myotis	Spp	IBRA region	

	Myotis macropus/Southern Myotis	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Ninox strenua/ Powerful Owl	Spp	IBRA region	
	Ninox strenua/Powerful Owl	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Petauroides volans/ Southern Greater Glider	Spp	IBRA region	
	Petauroides volans/Southern Greater Glider	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Petaurus norfolcensis/ Squirrel Glider	Spp	IBRA region	
	Petaurus norfolcensis/Squirrel Glider	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing	IBRA region

		under Part 4 of the BC Act shown below	
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Phascolarctos cinereus/ Koala	Spp	IBRA region	
	Phascolarctos cinereus/Koala	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Polytelis swainsonii/ Superb Parrot	Spp	IBRA region	
	Polytelis swainsonii/Superb Parrot	Any in NSW	
	Variation options		

	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Pomaderris pallida/ Pale Pomaderris	Spp	IBRA region	
	Pomaderris pallida/Pale Pomaderris	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Prasophyllum petilum/ Tarengo Leek Orchid	Spp	IBRA region	

	Prasophyllum petilum/Tarengo Leek Orchid	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Swainsona recta/ Small Purple-pea	Spp	IBRA region	
	Swainsona recta/Small Purple-pea	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Endangered	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Swainsona sericea/ Silky Swainson-pea	Spp	IBRA region	
	Swainsona sericea/Silky Swainson-pea	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Synemon plana/ Golden Sun Moth	Spp	IBRA region	
	Synemon plana/Golden Sun Moth	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing	IBRA region

		under Part 4 of the BC Act shown below	
	Fauna	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Thesium australe/ Austral Toadflax	Spp	IBRA region	
	Thesium australe/Austral Toadflax	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Murrumbateman, Bondo, Crookwell, Inland Slopes, Monaro, Murrumbateman and Snowy Mountains. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

BAM Candidate Species Report

Proposal Details

Assessment Id 00029440/BAAS17040/21/00029445	Proposal Name 6699 Humelink Assessment - Murrumbateman	BAM data last updated * 22/06/2023
Assessor Name Simon Tweed	Report Created 18/08/2023	BAM Data version * 61
Assessor Number BAAS17040	Assessment Type Major Projects	BAM Case Status Finalised
Assessment Revision 6	Date Finalised 18/08/2023	

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

List of Species Requiring Survey

Name	Presence	Survey Months
Ammobium craspedioides Yass Daisy	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Aprasia parapulchella Pink-tailed Legless Lizard	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Caladenia concolor Crimson Spider Orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Callocephalon fimbriatum Gang-gang Cockatoo	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☑ Mar ☑ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☑ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Calyptorhynchus lathami Glossy Black-Cockatoo	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Cercartetus nanus Eastern Pygmy-possum	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☐ Mar ☑ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☑ Sep ☑ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Delma impar Striped Legless Lizard	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Grevillea iaspicula Wee Jasper Grevillea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Haliaeetus leucogaster White-bellied Sea-Eagle	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☑ Mar ☑ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☑ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?

Hieraaetus morphnoides Little Eagle	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☑ Mar ☑ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☑ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Keyacris scurra Key's Matchstick Grasshopper	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☑ Mar ☐ Apr ☑ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Leucochrysum albicans subsp. tricolor Hoary Sunray	Yes (surveyed)	☑ Jan ☑ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☑ Dec ☐ Survey month outside the specified months?
Lophoictinia isura Square-tailed Kite	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Miniopterus orianae oceanensis Large Bent-winged Bat	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Myotis macropus Southern Myotis	Yes (surveyed)	☐ Jan ☑ Feb ☑ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☑ Dec ☐ Survey month outside the specified months?

Ninox strenua Powerful Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petauroides volans Southern Greater Glider	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petaurus norfolcensis Squirrel Glider	Yes (surveyed)	☐ Jan ☑ Feb ☐ Mar ☑ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☑ Sep ☑ Oct ☑ Nov ☑ Dec ☐ Survey month outside the specified months?
Phascolarctos cinereus Koala	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Polytelis swainsonii Superb Parrot	Yes (surveyed) *Survey months are outside of the months specified in Bionet.	☐ Jan ☑ Feb ☑ Mar ☑ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☑ Oct ☑ Nov ☑ Dec ☑ Survey month outside the specified months?
Pomaderris pallida Pale Pomaderris	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Prasophyllum petilum Tarengo Leek Orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Swainsona recta Small Purple-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Swainsona sericea Silky Swainson-pea	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Synemon plana Golden Sun Moth	Yes (expert report)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Thesium australe Austral Toadflax	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Threatened species Manually Added

None added

Threatened species assessed as not on site

Refer to BAR for detailed justification

BAM Candidate Species Report

Common name	Scientific name	Justification in the BAM-C
Booroolong Frog	Litoria booroolongensis	Refer to BAR
Brush-tailed Phascogale	Phascogale tapoatafa	Refer to BAR
Green and Golden Bell Frog	Litoria aurea	Refer to BAR
Grey-headed Flying-fox	Pteropus poliocephalus	Refer to BAR
Purple Copper Butterfly, Bathurst Copper Butterfly	Paralucia spinifera	Refer to BAR
Regent Honeyeater	Anthochaera phrygia	Refer to BAR
Swift Parrot	Lathamus discolor	Refer to BAR
Woolly Ragwort	Senecio garlandii	Refer to BAR

BAM Credit Summary Report

Proposal Details

Assessment Id
00029440/BAAS17040/21/00029445

Proposal Name
6699 Humelink Assessment - Murrumbateman

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Report Created
18/08/2023

BAM Data version *
61

Assessor Number
BAAS17040

BAM Case Status
Finalised

Date Finalised
18/08/2023

Assessment Revision
6

Assessment Type
Major Projects

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Ecosystem credits for plant communities types (PCT), ecological communities & threatened species habitat

Zone	Vegetation zone name	TEC name	Current Vegetation integrity score	Change in Vegetation integrity (loss / gain)	Area (ha)	Sensitivity to loss (Justification)	Species sensitivity to gain class	BC Act Listing status	EPBC Act listing status	Biodiversity risk weighting	Potential SAII	Ecosystem credits

Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion												
17	283_Veryhigh_TCZ_100	White Box - Yellow Box - Blakely's Red Gum Grassy Woodland and Derived Native Grassland in the NSW North Coast, New England Tableland, Nandewar, Brigalow Belt South, Sydney Basin, South Eastern Highla	78.9	78.9	0.28	Population size	High Sensitivity to Gain	Critically Endangered Ecological Community	Not Listed	2.50	True	14

00029440/BAAS17040/21/00029445	6699 Humelink Assessment - Murrumbateman	22/06/2023
Assessor Name	Report Created	BAM Data version *
Simon Tweed	18/08/2023	61
Assessor Number	Assessment Type	BAM Case Status
BAAS17040	Major Projects	Finalised
Assessment Revision		Date Finalised
6		18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Threatened species reliably predicted to utilise the site. No surveys are required for these species. Ecosystem credits apply to these species.

Common Name	Scientific Name	Vegetation Types(s)
Black Falcon	Falco subniger	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Black-chinned Honeyeater (eastern subspecies)	Melithreptus gularis gularis	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

Black-chinned Honeyeater (eastern subspecies)	Melithreptus gularis gularis	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Brown Treecreeper (eastern subspecies)	Climacteris picumnus victoriae	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion

Brown Treecreeper (eastern subspecies)	Climacteris picumnus victoriae	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Diamond Firetail	Stagonopleura guttata	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion

Diamond Firetail	Stagonopleura guttata	1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Dusky Woodswallow	Artamus cyanopterus cyanopterus	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion

Flame Robin	Petroica phoenicea	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Gang-gang Cockatoo	Callocephalon fimbriatum	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion

Gang-gang Cockatoo	Callocephalon fimbriatum	280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Glossy Black-Cockatoo	Calyptorhynchus lathami	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion

Glossy Black-Cockatoo	Calyptorhynchus lathami	1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Greater Broad-nosed Bat	Scoteanax rueppellii	731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Grey-headed Flying-fox	Pteropus poliocephalus	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion

Hooded Robin (south-eastern form)	Melanodryas cucullata cucullata	287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Large Bent-winged Bat	Miniopterus orianae oceanensis	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion

Large Bent-winged Bat	Miniopterus orianae oceanensis	351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Little Eagle	Hieraaetus morphnoides	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion

Little Eagle	Hieraaetus morphnoides	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Little Lorikeet	Glossopsitta pusilla	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Little Whip Snake	Suta flagellum	1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Painted Honeyeater	Grantiella picta	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion

Painted Honeyeater	Grantiella picta	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Powerful Owl	Ninox strenua	283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion

Powerful Owl	Ninox strenua	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Regent Honeyeater	Anthochaera phrygia	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Rosenberg's Goanna	Varanus rosenbergi	278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion

Rosenberg's Goanna	Varanus rosenbergi	349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Scarlet Robin	Petroica boodang	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion

Scarlet Robin	Petroica boodang	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Speckled Warbler	Chthonicola sagittata	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion

Speckled Warbler	Chthonicola sagittata	1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Spotted Harrier	Circus assimilis	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
Spotted-tailed Quoll	Dasyurus maculatus	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion

Spotted-tailed Quoll	Dasyurus maculatus	731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Square-tailed Kite	Lophoictinia isura	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
Superb Parrot	Polytelis swainsonii	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion

Superb Parrot	Polytelis swainsonii	283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Swift Parrot	Lathamus discolor	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion

Swift Parrot	Lathamus discolor	352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Turquoise Parrot	Neophema pulchella	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion

Turquoise Parrot	Neophema pulchella	1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Varied Sittella	Daphoenositta chrysoptera	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion

White-bellied Sea-Eagle	Haliaeetus leucogaster	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
White-throated Needletail	Hirundapus caudacutus	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		278-Riparian Blakely's Red Gum - box - shrub - sedge - grass tall open forest of the central NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion
		287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion

White-throated Needletail	Hirundapus caudacutus	322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		349-Inland Scribbly Gum - Red Stringybark open forest on hills composed of silicous substrates in the mid-Murrumbidgee and upper Lachlan catchments mainly in the western South Eastern Highlands Bioregion
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Yellow-bellied Glider	Petaurus australis	351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion
Yellow-bellied Sheathtail-bat	Saccolaimus flaviventris	266-White Box grassy woodland in the upper slopes sub-region of the NSW South Western Slopes Bioregion
		280-Red Stringybark - Blakely's Red Gum +/- Long-leaved Box shrub/grass hill woodland of the NSW South Western Slopes Bioregion
		283-Apple Box - Blakely's Red Gum moist valley and footslopes grass-forb open forest of the NSW South Western Slopes Bioregion

Yellow-bellied Sheathtail-bat	Saccolaimus flaviventris	287-Long-leaved Box - Red Box - Red Stringybark mixed open forest on hills and hillslopes in the NSW South Western Slopes Bioregion
		322-Inland Scribbly Gum - Red Stringybark - Black Cypress Pine hillslope shrub-tussock grass open forest on mainly sandstone ranges in the NSW central western slopes
		351-Brittle Gum - Broad-leaved Peppermint - Red Stringybark open forest in the north-western part (Yass to Orange) of the South Eastern Highlands Bioregion
		352-Red Stringybark - Blakely's Red Gum hillslope open forest on meta-sediments in the Yass - Boorowa - Crookwell region of the NSW South Western Slopes Bioregion and South Eastern Highlands Bioregion
		731-Broad-leaved Peppermint - Red Stringybark grassy open forest on undulating hills, South Eastern Highlands Bioregion
		1093-Red Stringybark - Brittle Gum - Inland Scribbly Gum dry open forest of the tablelands, South Eastern Highlands Bioregion
		1330-Yellow Box - Blakely's Red Gum grassy woodland on the tablelands, South Eastern Highlands Bioregion

Threatened species Manually Added

None added

Threatened species assessed as not within the vegetation zone(s) for the PCT(s)

BAM Biodiversity Credit Report (Variations)

Proposal Details

Assessment Id
00029440/BAAS17040/21/00029448

Proposal Name
6699 Humelink Assessment - Snowy Mountains

BAM data last updated *
22/06/2023

Assessor Name
Simon Tweed

Assessor Number
BAAS17040

BAM Data version *
61

Proponent Name(s)
Jack McGovern

Report Created
18/08/2023

BAM Case Status
Finalised

Assessment Revision
4

Assessment Type
Major Projects

Date Finalised
18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
Nil		

Species
Calotis glandulosa / Mauve Burr-daisy
Euphrasia scabra / Rough Eyebright
Irenepharsus magicus / Elusive Cress
Litoria castanea / Yellow-spotted Tree Frog
Diuris ochroma / Pale Golden Moths
Prasophyllum bagoense / Prasophyllum bagoense
Glycine latrobeana / Clover Glycine

Pseudomys fumeus / Smoky Mouse
Pseudophryne corroboree / Southern Corroboree Frog
Tyto tenebricosa / Sooty Owl
Pterostylis oreophila / Blue-tongued Greenhood
Prasophyllum innubum / Prasophyllum innubum
Prasophyllum keltonii / Kelton's Leek Orchid

Additional Information for Approval

Ecosystem Credit Summary (Number and class of biodiversity credits to be retired)

Name of Plant Community Type/ID	Name of threatened ecological community	Area of impact	HBT Cr	No HBT Cr	Total credits to be retired
300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment	Not a TEC	23.8	365	8	373.00

638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion	Not a TEC	30.6	377	0	377.00
679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion	Not a TEC	3.6	53	3	56.00
939-Montane wet heath and bog of the eastern tablelands, South Eastern Highlands Bioregion	Montane Peatlands and Swamps of the New England Tableland, NSW North Coast, Sydney Basin, South East Corner, South Eastern Highlands and Australian Alps bioregions	0.6	0	13	13.00
953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion	Not a TEC	86.5	1449	33	1482.00
1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion	Not a TEC	31.7	466	7	473.00
1224-Sub-alpine dry grasslands and heathlands of valley slopes, southern South Eastern Highlands Bioregion and Australian Alps Bioregion	Not a TEC	0.3	0	8	8.00

300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment

	Phascolarctos cinereus/Koala	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Endangered	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Prasophyllum bagoense/ Prasophyllum bagoense	Spp	IBRA region	
	Prasophyllum bagoense/Prasophyllum bagoense *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW	

Prasophyllum innubum/ Prasophyllum innubum	Spp	IBRA region
	Prasophyllum innubum/Prasophyllum innubum *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW
Prasophyllum keltonii/ Kelton's Leek Orchid	Spp	IBRA region
	Prasophyllum keltonii/Kelton's Leek Orchid *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW
Pseudomys fumeus/ Smoky Mouse	Spp	IBRA region
	Pseudomys fumeus/Smoky Mouse *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW
Pseudophryne corroboree/ Southern Corroboree Frog	Spp	IBRA region
	Pseudophryne corroboree/Southern Corroboree Frog *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*	Any in NSW
Pterostylis alpina/ Alpine Greenhood	Spp	IBRA region
	Pterostylis alpina/Alpine Greenhood	Any in NSW
	Variation options	

	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Pterostylis foliata/ Slender Greenhood	Spp	IBRA region	
	Pterostylis foliata/Slender Greenhood	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Pterostylis oreophila/ Blue-tongued Greenhood	Spp	IBRA region	

	Pterostylis oreophila/Blue-tongued Greenhood *Note: Variation rules do not apply for Critically Endangered species and impacts on Commonwealth listed entities that are a controlled action.*		Any in NSW
Rutidosis leiolepis/ Monaro Golden Daisy	Spp		IBRA region
	Rutidosis leiolepis/Monaro Golden Daisy		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Thelymitra alpicola/ Alpine Sun-orchid	Spp		IBRA region
	Thelymitra alpicola/Alpine Sun-orchid		Any in NSW
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region

	Flora	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Thesium australe/ Austral Toadflax	Spp	IBRA region	
	Thesium australe/Austral Toadflax	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Tyto novaehollandiae/ Masked Owl	Spp	IBRA region	
	Tyto novaehollandiae/Masked Owl	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing	IBRA region

		under Part 4 of the BC Act shown below	
	Fauna	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Tyto tenebricosa/ Sooty Owl	Spp	IBRA region	
	Tyto tenebricosa/Sooty Owl	Any in NSW	
	Variation options		
	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Fauna	Vulnerable	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.
Xerochrysum palustre/ Swamp Everlasting	Spp	IBRA region	
	Xerochrysum palustre/Swamp Everlasting	Any in NSW	
	Variation options		

	Kingdom	Any species with same or higher category of listing under Part 4 of the BC Act shown below	IBRA region
	Flora	Not Listed	Snowy Mountains, Bondo, Monaro, Murrumbateman, Snowy Mountains and South East Coastal Ranges. or Any IBRA subregion that is within 100 kilometers of the outer edge of the impacted site.

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Potential Serious and Irreversible Impacts

Name of threatened ecological community	Listing status	Name of Plant Community Type/ID
Nil		

Species
Calotis glandulosa / Mauve Burr-daisy
Euphrasia scabra / Rough Eyebright
Irenepharsus magicus / Elusive Cress

Litoria castanea / Yellow-spotted Tree Frog
Diuris ochroma / Pale Golden Moths
Prasophyllum bagoense / Prasophyllum bagoense
Glycine latrobeana / Clover Glycine
Pseudomys fumeus / Smoky Mouse
Pseudophryne corroboree / Southern Corroboree Frog
Tyto tenebricosa / Sooty Owl
Pterostylis oreophila / Blue-tongued Greenhood
Prasophyllum innubum / Prasophyllum innubum
Prasophyllum keltonii / Kelton's Leek Orchid

Credit Retirement Options

Like-for-like credit retirement options

Callocephalon fimbriatum / Gang-gang Cockatoo	Spp	IBRA subregion
	Callocephalon fimbriatum / Gang-gang Cockatoo	Any in NSW
Calotis glandulosa / Mauve Burr-daisy	Spp	IBRA subregion
	Calotis glandulosa / Mauve Burr-daisy	Any in NSW
Calotis pubescens / Max Mueller's Burr-daisy	Spp	IBRA subregion
	Calotis pubescens / Max Mueller's Burr-daisy	Any in NSW

Cercartetus nanus / Eastern Pygmy-possum	Spp	IBRA subregion
	Cercartetus nanus / Eastern Pygmy-possum	Any in NSW
Cyclodomorphus praealtus / Alpine She-oak Skink	Spp	IBRA subregion
	Cyclodomorphus praealtus / Alpine She-oak Skink	Any in NSW
Diuris ochroma / Pale Golden Moths	Spp	IBRA subregion
	Diuris ochroma / Pale Golden Moths	Any in NSW
Euphrasia scabra / Rough Eyebright	Spp	IBRA subregion
	Euphrasia scabra / Rough Eyebright	Any in NSW
Glycine latrobeana / Clover Glycine	Spp	IBRA subregion
	Glycine latrobeana / Clover Glycine	Any in NSW
Hieraaetus morphnoides / Little Eagle	Spp	IBRA subregion
	Hieraaetus morphnoides / Little Eagle	Any in NSW
Irenepharsus magicus / Elusive Cress	Spp	IBRA subregion

	Irenepharsus magicus / Elusive Cress	Any in NSW
Leucochrysum albicans subsp. tricolor / Hoary Sunray	Spp	IBRA subregion
	Leucochrysum albicans subsp. tricolor / Hoary Sunray	Any in NSW
Litoria castanea / Yellow-spotted Tree Frog	Spp	IBRA subregion
	Litoria castanea / Yellow-spotted Tree Frog	Any in NSW
Mastacomys fuscus / Broad-toothed Rat	Spp	IBRA subregion
	Mastacomys fuscus / Broad-toothed Rat	Any in NSW
Ninox connivens / Barking Owl	Spp	IBRA subregion
	Ninox connivens / Barking Owl	Any in NSW
Ninox strenua / Powerful Owl	Spp	IBRA subregion
	Ninox strenua / Powerful Owl	Any in NSW
Petauroides volans / Southern Greater Glider	Spp	IBRA subregion
	Petauroides volans / Southern Greater Glider	Any in NSW

Petaurus australis - endangered population / Yellow-bellied Glider population on the Bago Plateau	Spp	IBRA subregion
	Petaurus australis - endangered population / Yellow-bellied Glider population on the Bago Plateau	Any in NSW
Petaurus norfolcensis / Squirrel Glider	Spp	IBRA subregion
	Petaurus norfolcensis / Squirrel Glider	Any in NSW
Petroica rodinogaster / Pink Robin	Spp	IBRA subregion
	Petroica rodinogaster / Pink Robin	Any in NSW
Phascogale tapoatafa / Brush-tailed Phascogale	Spp	IBRA subregion
	Phascogale tapoatafa / Brush-tailed Phascogale	Any in NSW
Phascolarctos cinereus / Koala	Spp	IBRA subregion
	Phascolarctos cinereus / Koala	Any in NSW
Prasophyllum bagoense / Prasophyllum bagoense	Spp	IBRA subregion
	Prasophyllum bagoense / Prasophyllum bagoense	Any in NSW

Prasophyllum innubum / Prasophyllum innubum	Spp	IBRA subregion
	Prasophyllum innubum / Prasophyllum innubum	Any in NSW
Prasophyllum keltonii / Kelton's Leek Orchid	Spp	IBRA subregion
	Prasophyllum keltonii / Kelton's Leek Orchid	Any in NSW
Pseudomys fumeus / Smoky Mouse	Spp	IBRA subregion
	Pseudomys fumeus / Smoky Mouse	Any in NSW
Pseudophryne corroboree / Southern Corroboree Frog	Spp	IBRA subregion
	Pseudophryne corroboree / Southern Corroboree Frog	Any in NSW
Pterostylis alpina / Alpine Greenhood	Spp	IBRA subregion
	Pterostylis alpina / Alpine Greenhood	Any in NSW
Pterostylis foliata / Slender Greenhood	Spp	IBRA subregion
	Pterostylis foliata / Slender Greenhood	Any in NSW
Pterostylis oreophila / Blue-tongued Greenhood	Spp	IBRA subregion

	Pterostylis oreophila / Blue-tongued Greenhood	Any in NSW
Rutidosis leiolepis / Monaro Golden Daisy	Spp	IBRA subregion
	Rutidosis leiolepis / Monaro Golden Daisy	Any in NSW
Thelymitra alpicola / Alpine Sun-orchid	Spp	IBRA subregion
	Thelymitra alpicola / Alpine Sun-orchid	Any in NSW
Thesium australe / Austral Toadflax	Spp	IBRA subregion
	Thesium australe / Austral Toadflax	Any in NSW
Tyto novaehollandiae / Masked Owl	Spp	IBRA subregion
	Tyto novaehollandiae / Masked Owl	Any in NSW
Tyto tenebricosa / Sooty Owl	Spp	IBRA subregion
	Tyto tenebricosa / Sooty Owl	Any in NSW
Xerochrysum palustre / Swamp Everlasting	Spp	IBRA subregion
	Xerochrysum palustre / Swamp Everlasting	Any in NSW

BAM Candidate Species Report

Proposal Details

Assessment Id 00029440/BAAS17040/21/00029448	Proposal Name 6699 Humelink Assessment - Snowy Mountains	BAM data last updated * 22/06/2023
Assessor Name Simon Tweed	Report Created 18/08/2023	BAM Data version * 61
Assessor Number BAAS17040	Assessment Type Major Projects	BAM Case Status Finalised
Assessment Revision 4	Date Finalised 18/08/2023

List of Species Requiring Survey

Name	Presence	Survey Months
Callocephalon fimbriatum Gang-gang Cockatoo	Yes (surveyed)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☑ Dec ☐ Survey month outside the specified months?
Calotis glandulosa Mauve Burr-daisy	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Calotis pubescens Max Mueller's Burr-daisy	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Cercartetus nanus Eastern Pygmy-possum	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Cyclodomorphus praealtus Alpine She-oak Skink	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Diuris ochroma Pale Golden Moths	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Euphrasia scabra Rough Eyebright	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Glycine latrobeana Clover Glycine	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Hieraaetus morphnoides Little Eagle	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Irenepharsus magicus Elusive Cress	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Leucochrysum albicans subsp. tricolor Hoary Sunray	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Litoria castanea Yellow-spotted Tree Frog	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Mastacomys fuscus Broad-toothed Rat	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ninox connivens Barking Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Ninox strenua Powerful Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Petauroides volans Southern Greater Glider	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petaurus australis - endangered population Yellow-bellied Glider population on the Bago Plateau	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petaurus norfolcensis Squirrel Glider	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Petroica rodinogaster Pink Robin	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Phascogale tapoatafa Brush-tailed Phascogale	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Phascolarctos cinereus Koala	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Prasophyllum bagoense Prasophyllum bagoense	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Prasophyllum innubum Prasophyllum innubum	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Prasophyllum keltonii Kelton's Leek Orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Pseudomys fumeus Smoky Mouse	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Pseudophryne corroboree Southern Corroboree Frog	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Pterostylis alpina Alpine Greenhood	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Pterostylis foliata Slender Greenhood	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Pterostylis oreophila Blue-tongued Greenhood	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Rutidosis leiolepis Monaro Golden Daisy	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Thelymitra alpicola Alpine Sun-orchid	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Thesium australe Austral Toadflax	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Tyto novaehollandiae Masked Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?

Tyto tenebricosa Sooty Owl	Yes (assumed present)	☐ Jan ☐ Feb ☐ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☐ Nov ☐ Dec ☐ Survey month outside the specified months?
Xerochrysum palustre Swamp Everlasting	Yes (surveyed)	☐ Jan ☐ Feb ☑ Mar ☐ Apr ☐ May ☐ Jun ☐ Jul ☐ Aug ☐ Sep ☐ Oct ☑ Nov ☐ Dec ☐ Survey month outside the specified months?

Threatened species Manually Added

None added

Threatened species assessed as not on site

Refer to BAR for detailed justification

Common name	Scientific name	Justification in the BAM-C
Alpine Tree Frog	Litoria verreauxii alpina	Refer to BAR
Caladenia montana	Caladenia montana	Refer to BAR
Guthega Skink	Liopholis guthega	Refer to BAR
Kiandra Leek Orchid	Prasophyllum retroflexum	Habitat constraints
Large Bent-winged Bat	Miniopterus orianae oceanensis	Habitat constraints
Leafy Anchor Plant	Discaria nitida	Refer to BAR
Northern Corroboree Frog	Pseudophryne pengilleyi	Refer to BAR
Spotted Tree Frog	Litoria spenceri	Habitat constraints
Square Raspwort	Haloragis exalata subsp. exalata	Refer to BAR
White-bellied Sea-Eagle	Haliaeetus leucogaster	Habitat constraints

00029440/BAAS17040/21/00029448	6699 Humelink Assessment - Snowy Mountains	22/06/2023
Assessor Name	**Report Created**	**BAM Data version ***
Simon Tweed	18/08/2023	61
Assessor Number	**Assessment Type**	**BAM Case Status**
BAAS17040	Major Projects	Finalised
Assessment Revision		**Date Finalised**
4		18/08/2023

* Disclaimer: BAM data last updated may indicate either complete or partial update of the BAM calculator database. BAM calculator database may not be completely aligned with Bionet.

Threatened species reliably predicted to utilise the site. No surveys are required for these species. Ecosystem credits apply to these species.

Common Name	Scientific Name	Vegetation Types(s)
Barking Owl	Ninox connivens	638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion
Dusky Woodswallow	Artamus cyanopterus cyanopterus	300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment
		638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion
		939-Montane wet heath and bog of the eastern tablelands, South Eastern Highlands Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion

Dusky Woodswallow	Artamus cyanopterus cyanopterus	1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1224-Sub-alpine dry grasslands and heathlands of valley slopes, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
Eastern False Pipistrelle	Falsistrellus tasmaniensis	300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment
		638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion
		939-Montane wet heath and bog of the eastern tablelands, South Eastern Highlands Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion
Flame Robin	Petroica phoenicea	300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment
		638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion
		939-Montane wet heath and bog of the eastern tablelands, South Eastern Highlands Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion

Flame Robin	Petroica phoenicea	1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1224-Sub-alpine dry grasslands and heathlands of valley slopes, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
Gang-gang Cockatoo	Callocephalon fimbriatum	300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment
		638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion
Large Bent-winged Bat	Miniopterus orianae oceanensis	300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment
		638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion
		939-Montane wet heath and bog of the eastern tablelands, South Eastern Highlands Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion

Little Eagle	Hieraaetus morphnoides	300-Ribbon Gum - Narrow-leaved (Robertsons) Peppermint montane fern - grass tall open forest on deep clay loam soils in the upper NSW South Western Slopes Bioregion and western Kosciuszko escarpment
		638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
		679-Black Sallee - Snow Gum low woodland of montane valleys, South Eastern Highlands Bioregion and Australian Alps Bioregion
		939-Montane wet heath and bog of the eastern tablelands, South Eastern Highlands Bioregion
		953-Mountain Gum - Snow Gum - Broad-leaved Peppermint shrubby open forest of montane ranges, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1196-Snow Gum - Mountain Gum shrubby open forest of montane areas, South Eastern Highlands Bioregion and Australian Alps Bioregion
		1224-Sub-alpine dry grasslands and heathlands of valley slopes, southern South Eastern Highlands Bioregion and Australian Alps Bioregion
Masked Owl	Tyto novaehollandiae	638-Alpine Ash - Mountain Gum moist shrubby tall open forest of montane areas, southern South Eastern Highlands Bioregion and Australian Alps Bioregion

Attachment 21. Prescribed impacts assessment

1. Karst, caves, crevices, cliffs, rocks and other geological features of significance supporting habitat for threatened fauna species

The assessment of impacts to karst, caves, crevices, cliffs, rocks as a result of the project is detailed in Section 12.5.2, Table 13-21 and Table 12-22 of the BDAR. A detailed explanation of the supplementary stepwise approach used to map cliffline and karst habitat is outlined below, with supporting advice and consultation from the NSW BCD.

1.1 Supplementary cliffline and karst modelling

Potential karst and cliffline habitats that may offer suitable roosting opportunities for candidate microchirpotera species were mapped using the approach documented below. These sites were ground-truthed to confirm the presence/ absence of roosts within accessible lands. However, where lands could not be accessed, microbat breeding within these habitats has been assumed. The areas identified as having high potential for supporting cliff and karst habitats are outlined below in Table A21- 3 and Table A21- 4.

The mapping of habitat polygons was considered robust during the spatial review phase for both karst and cliffline mapping, and all areas of undulating, steep terrain, and generally rocky areas were mapped broadly (given the area hasn't been ground-truthed) to encompass areas of potential karst and cliffline habitat (including areas of potential small scarps, and caves).

Advice from the NSW BCD was provided via email on the 23 November 2022, regarding threatened microbat species polygon mapping approaches. This is outlined below in relation to relevant species.

Niche completed a thorough desktop review of available data and literature to determine the location of nearby known or potential maternity roost sites. The literature review determined that there were no confirmed or potential Little Bent-winged Bat, Large Bent-winged Bat and Large-eared Pied Bat breeding roosts records (BioNet 2022) within 100 m of the project footprint. However, this approach does not address data gaps for areas that have not been previously ground-truthed or surveyed within the project footprint. Therefore, a precautionary approach has been adopted and a supplementary method for mapping potential breeding and roosting habitat implemented. Where land access was permissible, biodiversity surveys were conducted, and habitat has been ground-truthed and mapped.

1.1.1 NSW BCD advice

- "Little and Large Bent-wing Bats:
  - **Potential breeding habitat** is caves, tunnels, mines, or other structures known or suspected to be used by M. schreibersii oceanensis including species records in BioNet with microhabitat code 'IC – in cave'; observation type code 'E nest-roost'; with numbers of individuals >500; or from the scientific literature. All breeding habitats including the cave, or other features, used for breeding and the area immediately surrounding this feature must be mapped. Species polygon boundaries should have a 100-metre radius buffer around an accurate GPS point location centred on the cave/feature entrance.
  - our advice is to conduct a BioNet search of both species and search for records 'in cave' or 'roost' or where the numbers >500 , and a literature search for published roost - (any of those could be considered 'known or suspected to be used..') – if no records (plus 100 metre buffer) are located within the route /potential footprint then there is no 'potential breeding habitat' and you would

not need to survey or offset. You must publish the results of the search in the BDAR demonstrating the absence of such locations.

- Large eared pied Bat:
  - **Potential breeding habitat**: The PCTs associated with the species (as per the TBDC) within 100 metres of rocky areas containing caves, or overhangs or crevices, cliffs or escarpments, or old mines, tunnels, culverts, derelict concrete buildings.
  - As per previous advice we are concerned that the modelling of Karst and cliffs sounds might not have sufficient resolution to detect small scarps, and caves. Niche will need to demonstrate and justify that the resolution is adequate in the BDAR– then apply the BAM standards (PCTs associate with the species within distances) this may be sufficient for assumed presence – again if not assuming presence we advise a species expert approach as surveys must be undertaken as per the Threatened Bat Survey Guide to confirm/discount breeding habitat
  - Please note that where there is not sufficient justification to reliably conclude absence of habitat constraints, survey or an expert report must be provided to determine absence or refine species polygon."

1.1.2 Karst mapping methods

Karst mapping involved a review of BioNet (2022) records and literature review to establish known bat roost sites within the broader locality (within 50 kilometres of the project footprint) including the following data sources:

- Geoscience Australia (including geomorphology and caves mapping, Geoscience Australia 2006) datasets
- Scientific literature on known maternity roosts, and karst sites within the Lachlan Fold Belt, age, and formation processes:
  - Law, B and Chidel, M (2004). Summer counts of the eastern bent-wing bat at Drum Cave, Bungonia – 2003/04. *Report to the NSW National Parks and Wildlife Service.* Research and Development Division, State Forests of New South Wales.
  - Magee, J.W (2009). Palaeovalley groundwater resources in arid and semi-arid Australia – a literature review. *Geoscience Australia Record 2009/03*, Geoscience Australia, Canberra.
  - Mills, D (2021). Summer and autumn activity patterns of the eastern bent-wing bat (*Miniopterus orianae oceanensis*) at a large maternity site in southern New South Wales. *Australian Journal of Zoology* 68, 332-345.
  - Osborne, R.A.L. and Branagan, D.F., 1988. Karst landscapes of New South Wales, Australia. *Landscapes of the Southern Hemisphere* 25: 467-480.
  - Osborne, R (2010). Rethinking eastern Australian caves. *Geological Society of London Special Publications.* 346. 289-308. 10.1144/SP346.15.
  - Spate, A and Baker, A (2018). Karst values of Kosciuszko National Park: A review of values and recent research. *Proceedings of the Linnean Society of New South Wales* 140, 253-264.
  - Williams E and Thomson, B (2018). Aspects of the foraging and roosting ecology of the large-eared pied bat (*Chalinolobus dwyeri*) in the western Blue Mountains, with implications for conservation. *Australian Mammalogy* 41, 212-219.
  - NSW Seamless Geology Version 2.1 (Department of Regional New South Wales 2020) https://geonetwork.geoscience.nsw.gov.au/geonetwork/srv/eng/catalog.search#/metadata/3dfbc096-ab1f-4b34-92a1-5e347bfaecb8:
  - NSW Surface Geology (1:100,000)
  - Contour mapping to determine areas where there were obvious high topographic relief/cliff line areas:
  - NSW Elevation and Depth theme contour mapping (1:25000, using 5 m accuracy DEM and hill shade model) (Spatial Services 2021)

https://portal.spatial.nsw.gov.au/portal/home/item.html?id=f1b1b26b23ab4574a561f890edd3bd7e

Regional karst information (obtained collated datasets and scientific literature) was collated and analysed spatially. Using multiple lines of evidence, the initial stages of the review process Included:

- A review of valid BioNet and Atlas of Living Australia (ALA) microbat records within a 50 kilometre buffer of the project footprint
- A review of published literature to determine the locality of known or potential maternity roost sites in proximity to the project footprint, cave roost microhabitat requirements, general seasonal migration paths/distribution of threatened cave-dwelling bat species
- A review of known karst sites within the Lachlan Fold Belt, age, and formation processes.

Using ArcMap, the project footprint was buffered by 50 kilometres and the NSW Seamless Geology was clipped to the 50 kilometres buffer; the new layer was labelled 'Geology 50 kilometres buffer'. The same process was also undertaken for valid BioNet records within 50 kilometres of the Project Footprint. The BioNet records were filtered and refined to show only records for 'Southern Myotis', 'Large-eared Pied Bat', 'Little Bentwinged-bat' and 'Large Bentwinged-bat'. The observation types were also filtered to highlight records spatially where observations state 'trapped', 'in cave' or 'roost', or where there were more than 500 individuals recorded.

Using the intersect tool, with a 50 kilometres buffer of the geology layer and the caves mapping layer (Geoscience Australia 2006), a new layer was created called 'Cave Geology'.

Layer attributes were filtered and refined, where similar geological formations occurred within the project footprint to confirmed cave/roost sites (e.g., Yarrangobilly, Bungonia and Wee Jasper) or landscapes containing carbonate bedrocks with a similar deposition age (usually limestone, dolomite, or marble) were identified. This layer was then intersected with the refined BioNet record layer, to determine where species records correspond with known karst locations, or geologies considered 'karstic'. The combined layer (referred to as 'Karst Geology') is represented below in Table A21- 1.

Table A21- 1: Cave Geologies, potential and known bat roosts within the project footprint and broader region

Formation	Unit Name	Feature Name	Feature Type	Feature Description	Deposition Type	Medial Age	Dominant lens	Bat Roost	Bat species record (BioNet 2022)	Distance from project footprint (km)	Justification for being a karstic formation
Cobra Formation	Cobra Formation	Billy's Creek Cave	Cave	Marl interbedded with limestone and limestone breccia, calcareous siltstone with shelly detritus on bedding planes, siliceous siltstone, and mudstone; minor porphyritic rhyolite with peperite (intrusive hyaloclastite).	Shallow Marine	Ludlow	Mudstone	No	N/A	38	Confirmed cave and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Burrinjuck Granite	Burrinjuck Granite	Black Andrew Mine	Mine	Pink, medium- to coarse-grained, massive, equigranularity, leucocratic, biotite granite. High magnetic susceptibility.	Shallow crustal - continental I-type	Early Devonian	Granite	Yes	Large Bent-winged Bat	17	Confirmed cave, roost site and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Wee Jasper Formation	Wee Jasper Formation	Black Andrew Nature Reserve	Overhang / Cave	Fining-upward cycles of red purple–brown conglomerate, cross-bedded sandstone and siltstone, approximately 1760 m thick in type section.	Terrestrial - alluvial fan	Middle Devonian	Siliciclastic sedimentary rock	Yes	Large Bent-winged Bat	17	Confirmed cave, roost site and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Abercrombie Formation	Abercrombie Formation	Bungonia Caves	Cave	Brown and buff to grey, thin- to thick-bedded, fine- to coarse-grained mica-quartz (±feldspar)	Deep Marine - siliciclastic & biochemical	Early Ordovician	Saprolite/ sandstone	Yes	Large Bent-winged Bat	39	Confirmed cave, roost site and comprised of marine

Formation	Unit Name	Feature Name	Feature Type	Feature Description	Deposition Type	Medial Age	Dominant lens	Bat Roost	Bat species record (BioNet 2022)	Distance from project footprint (km)	Justification for being a karstic formation
				sandstone, interbedded with laminated siltstone and mudstone. Sporadic chert-rich units.							sediments (typical deposition type for caves within the Lachlan Fold Belt).
Taemas Limestone	Taemas Limestone	Careys Cave	Cave	Blue–grey, thick- to thin- well-bedded or occasionally massive, often richly fossiliferous limestone. Minor impure flaggy limestone, calcareous mudstone or shale, and tuffaceous sandstone.	Shallow Marine - carbonate	Early Devonian	Limestone	Yes	Large Bent-winged Bat	24	Confirmed cave, roost site and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Wee Jasper Formation	Wee Jasper Formation	Church Cave	Cave	Fining-upward cycles of red purple–brown conglomerate, cross-bedded sandstone and siltstone, approximately 1760 m thick in type section.	Terrestrial - alluvial fan	Middle Devonian	Siliciclastic sedimentary rock	Yes	Large Bent-winged Bat/Southern Myotis	26	Confirmed cave, roost site and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Cobra Formation	Cobra Formation - limestone	Colong Caves	Cave	Limestone lenses.	Shallow Marine - carbonate	Ludlow	Limestone	No	N/A	37	Confirmed cave and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).

Formation	Unit Name	Feature Name	Feature Type	Feature Description	Deposition Type	Medial Age	Dominant lens	Bat Roost	Bat species record (BioNet 2022)	Distance from project footprint (km)	Justification for being a karstic formation
Blue Waterhole Formation	Blue Waterhole Formation	Cooleman Caves	Cave	Siltstone, cherty siltstone, limestone and hornfels.	Shallow Marine - shelf	Ludlow	Siltstone	No	N/A	36	Confirmed cave and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Cooleman Limestone	Cooleman Limestone	Cooleman Caves	Cave	Massive to well-bedded limestone, commonly strongly recrystallised.	Shallow Marine - carbonate	Ludlow	Siltstone	No	N/A	36	Confirmed cave and comprised of marine sediments (typical deposition type for caves within the Lachlan Fold Belt).
Elmside Formation	Elmside Formation - limestone	project footprint	Murrumbateman	Algal limestone.	Shallow Marine - carbonate	Ludlow	Algal limestone	Not known	N/A	0	Dominant lens is algal limestone, deposition is shallow marine. Deposition and age is the same as Wombeyan, Yarrangobilly, and Colong Caves.
Talmo Formation	Talmo Formation - mudstone/ limestone	project footprint	Murrumbateman	Interbedded green-grey, dark grey or black mudstone layers, 2–20 cm thick, and recessive limestone beds, approximately 5–20 cm thick.	Shallow Marine - carbonate	Llandovery	Mudstone	Not known	N/A	0	Same geology formation, deposition, and age as Billy's Creek Cave.

Formation	Unit Name	Feature Name	Feature Type	Feature Description	Deposition Type	Medial Age	Dominant lens	Bat Roost	Bat species record (BioNet 2022)	Distance from project footprint (km)	Justification for being a karstic formation
Hawkins Volcanics	Hawkins Volcanics	project footprint	Murrumbateman	Blue-grey, massive, welded, porphyritic biotite-cordierite-garnet rhyolitic to dacitic ignimbrite; sporadic quartz and dioritic xenoliths. Flow-banded, vesicular rhyodacitic-dacite; volcanic sandstone, minor rhyodacitic agglomerate and rhyolitic lapilli tuff	Transitional (marine to terrestrial)	Llandovery	Pyroclastic rock	Possible	Large Bent-winged Bat - Niche recorded	0	Dominant lens and deposition type is the same as Wombeyan Caves, however, different Epoch/Age.

1.1.3 Digital Elevation Model

A Digital Elevation Model (DEM) was used, with 5 m accuracy contour mapping (NSW Elevation and Depth theme contour mapping, Spatial Services 2021), clipped to the Karst Geology layer. The Karst Cave – High potential layer was interrogated spatially, using Orth mosaic aerial imagery.

Areas considered "high potential" for karst formations were those with a slope gradient greater than 30 degrees and intersecting the Karst Geology layer (Table A21- 1). The polygons were produced by the intersection of slopes greater than 30 degrees, and karstic geologies. The areas of high potential were reviewed spatially using the high-resolution aerial imagery, nearby bat records (BioNet 2022), and available field observations (habitat mapping, survey results, vegetation mapping, etc). Polygons were then stratified as low, moderate, or high potential for karsts based on multiple lines of evidence (e.g., presence of nearby records, field observations, photos, lithology, and geological deposition age. Interpretation of high-resolution aerial imagery was also undertaken to identify signs of cliffs, uplift, or other signs of metamorphism), the stratification of karstic potential is below defined in Table A21- 2.

Table A21- 2: Likelihood of karsts criteria

Karst likelihood	Criteria
High	Considered high potential if three or more of the below criteria are met: • High topographic relief determined by high-resolution aerial imagery or DEM, generally steep slope gradient, obvious signs of uplift/ outcropping, overhangs, or dissolution holes (considered typical of limestone caves in the eastern portion of the Lachlan Fold Belt, Osborne 2010)

Karst likelihood	Criteria
	• Underlain with geologies that are consistent with cave systems within in the region, and of the same deposition age • Supports roosting microbats (as determined by published literature and/or the BioNet [DPE 2022] records) • Field-based data has identified areas of potential cave or overhang habitat.
Moderate	Considered moderate potential if two or more of the below criteria are met: • High topographic relief, generally steep slope gradient, signs of outcropping, overhang or resemble a dissolution hole (considered typical of limestone caves in the eastern portion of the Lachlan Fold Belt, Osborne 2010) • Underlain with geologies that are consistent with cave systems within in the region, and of the same deposition age • Has some connectivity with areas considered high potential of being karstic (cave forming) • In proximity to nearby bat records (within 100 m).
Low	Considered low potential if only the below criteria were met: • Underlain with geologies that are consistent with cave systems within in the region, and of the same deposition age.

This method of determining high potential karstic landscapes was developed based on the knowledge of Australian karsts typically having distinctive topography in which the landscapes are largely shaped by the dissolution of carbonate bedrocks. This process results in unusual surface and subsurface features ranging from sinkholes, vertical shafts, disappearing streams, and springs, to complex underground drainage systems and caves (Magee 2009, Osborne 2010, Spate and Baker 2018). Further, Bent-winged bats are known to occupy caves and vertical shafts, with a large, domed chamber providing warm and humid conditions to facilitate growth of the young (like a humidi-crib) (Dwyer and Hamilton-Smith 1965).

From the spatial modelling and desktop review process, areas of high potential for karstic landforms were identified within the Bungonia, Crookwell, Murrumbateman, and Snowy Mountains IBRA subregions of the project footprint (Table A21- 3).

Table A21- 3: High potential karst habitats, and mitigation for Large Bent-winged Bat

Feature	Justification	IBRA Subregion	Species habitat (ha) per IBRA subregion	Area of habitat mapped (ha)	Mitigation measures for high potential karst areas
1	The feature was mapped as 'high' karst potential, as the area is underlain by Abercrombie formation (marine limestone deposits, adjacent to riverbed). The landform has the same geomorphology as Bungonia Caves network, high topographic relief, and nearby Large Bentwing-Bat records 1 km away (BioNet).	**Bungonia**	Large Bent-winged Bat (1.12 ha)	0.10	Area mapped as high potential is 300 m outside the project footprint and is adjacent to a mapped fauna corridor (CRO_6, Figure 13-14), the proposed mitigation measures include: • Pre-construction survey to confirm roosting habitat in the locality • If present, develop adaptive safeguards to mitigate indirect impacts to roosting individuals.
2	The feature was mapped as 'high' karst potential, as the area is underlain by Abercrombie formation (marine limestone deposits, adjacent to riverbed) - The same geomorphology as Bungonia Caves network. Nearby Large Bentwing-Bat records on Tarlo River (BioNet).			0.16	Area mapped as high potential is on the edge of the project footprint and is directly adjacent to the indicative potential access track and transmission line structure bench. The area is within the BUN_8 fauna corridor (Figure 13-14) and is highly connected with the broader surrounds. The proposed mitigation measures include: • Pre-construction survey to confirm roosting habitat in the locality • If present, re-design where possible to avoid impacts to confirmed roosts.
3	The feature was mapped as 'high' karst potential, as the area is underlain by Abercrombie formation (marine limestone deposits, adjacent to riverbed) - The same geomorphology as Bungonia Caves network. Nearby Large Bentwing-Bat records on Tarlo River (BioNet).			0.05	Area mapped as high potential is on the edge of the project footprint and is directly adjacent to the indicative potential access track and transmission line structure bench. 11	The feature was mapped as 'high' karst potential, based on high topographic relief (an incised gully area), that is underlain Abercrombie Formation (same geology/formation as Bungonia caves), and same epoch as Yarrangobilly/Coolamon caves. There are also nearby Large Bent-winged bat records.	**Inland Slopes**	Large Bent-winged Bat (0.85 ha)	0.10	Area mapped as high potential is 200 m outside the project footprint and is adjacent to a mapped fauna corridor (INL_17, Figure 13-14), the proposed mitigation measures include: • Pre-construction survey to confirm roosting habitat in the locality • If present, develop adaptive safeguards to mitigate indirect impacts to roosting individuals.

1.1.4 Potential cliffline mapping

Large-eared Pied Bat

Large-eared pied bat is not known to have any maternity cave roost sites in south or south-west NSW (Dwyer 1966, Pennay 2008). Known maternity sites for this species are in northern NSW and includes a granitic mine tunnel (Dwyer 1966) and another sandstone cave in central New South Wales with a low ceiling providing stable temperatures at approximately 15º C (Pennay 2008). Despite this, Large-eared Pied Bat is regarded as a Species Credit Species (for roosting/ foraging habitat) and is also known to occur within the south-east and south-west region of NSW. The species is known to roost in sandstone overhangs, and cliffline habitats. Sandstone cliffs and fertile wooded valley habitat within proximity of each other should be considered habitat critical to the survival of the Large-eared Pied Bat (DECC 2007).

Sooty Owl and Masked Owl

Masked Owl and Sooty Owl roosts and breeds in moist eucalypt forested gullies, using large tree hollows or sometimes in caves for nesting. Masked Owl was identified during spotlighting surveys outside the current project footprint (within Bago State Forest; Bondo IBRA subregion). Areas of typical rocky hillslope and rock overhangs occur throughout the project footprint, in areas with moderate to high topographic relief. Steep cliffs, and overhangs that intersect the project footprint are likely to support microhabitats for both owl species and may also provide potential nest habitat for Sooty Owl.

On that basis, the process for modelling potential cliffline habitat was not reliant on karstic geologies, but rather geomorphology, with the presence of incised sandstone valleys, gorges, fissures, and overhangs. Using a separate DEM layer, with 5 m accuracy and high-resolution ortho mosaic aerial imagery areas with potential cliffline habitat (slope gradient greater than 45 degrees) were filtered as a separate layer for cliffline habitat. The polygons produced by the slope filter were reviewed individually using high-resolution aerial imagery, review of nearby bat records (BioNet 2022) and on-the-ground data collection (habitat mapping, survey results, vegetation mapping etc).

Polygons were considered high potential to support cliffline habitat if the following were present:

- presence of nearby (2 km) cave-dependant bats, and owl records (BioNet 2022)
- Suitable high topographic relief determined by the DEM, generally steep slope gradient, obvious signs of uplift/ outcropping, overhangs, presence of cliff line
- Field collected data supports the presence of overhang habitat, and nearby suitable foraging resources endorsed by vegetation mapping, field notes, and photos
- aerial interpretation showing signs of cliffs, steep gullies etc.

Each mapped feature identified in the cliffline and karst mapping was reviewed manually, and then the final layers were included in the species modelling, where the BAM standards (e.g., PCTs associations, geographical constraints) were also be applied to create species polygons for inaccessible areas (as per Table A21- 4). A detailed description of the species habitat mapping methodology is in Attachment 9 of the BDAR.

Table A21- 4: Species cliffline mapping, and species habitat mapping

Species	IBRA Subregion	Number of cliff/ overhang features mapped	Associated PCTs	IBRA subregion	Geographic constraints	BioNet habitat constraints	Patch size	Vegetation cover (%)	Habitat constraints applied	Species habitat (ha) per IBRA subregion	Extent of proposed impacts to karst, caves, crevices, cliffs, rocks, and other geological features of significance

2. Human made structures supporting habitat for threatened fauna species

The assessment of impacts to Human made structures as a result of the project are detailed in Section 12.5.6, Table 13-29 of the BDAR. Table A21- 5 below identifies water crossings that occur within the project footprint likely to support existing culverts and / or bridge structures offering marginal roost habitat for *microchirpotera* species. There are no impacts proposed to existing human-made structures (i.e., culvert/ bridge demolition) as a result of the project. Therefore, impacts to human-made structure have not been addressed further within the BDAR.

Table A21- 5: Existing crossing structures within the project footprint

3. Habitat connectivity

The assessment of impacts to habitat connectivity as a result of the project is detailed in Section 12.5.3, Table 13-21 and Table 12-22 of the BDAR. The proposed impacts to connectivity, design and mitigation priority areas are highlighted in Figure 13-13 and 13-14, and below in Table A21-6.

Criteria applied to assess existing levels of connectivity and any risk of impact as a result of the project are outlined in Table A21-6.

Table A21- 6: Existing connectivity, and risk of impact criteria

Existing connectivity	Criteria for existing connectivity	Risk of impact to connectivity	Criteria for risk of impacts to connectivity
High	Considered to have **high connectivity** if the any of the below criteria have been met: • High connectivity, and intact with the broader landscape (>100 ha patch size) • Species identified in the locality require larger areas to occupy as part of their home range (e.g., Owls, Gliders) have been identified within the vicinity corridor • The vegetation communities within the corridor are in moderate to very high condition • Field-based data has identified areas of high quality, connected habitats.	**High**	Considered high risk of impact to connectivity if the below criteria are met: • If the proposed full vegetation clearance will effectively segment the remnant into two, or isolate an area of habitat • If a combination of clearances such as, full, partial and hazard tree removal is likely to isolate individuals, or impede terrestrial fauna movement • If species have been recorded in the locality that require large areas as part of their home range (e.g., Owls, Gliders), and a reduced home range is imminent as result of the project • If species have been recorded in the locality that have restricted home ranges (<1 km), and the proposed vegetation clearance, is likely to effectively reduce or isolate habitat in the locality.
Moderate	Considered to have **moderate connectivity** if the below criteria have been met: • Moderately connected with the broader landscape (>50 ha patch size) • Field-based data has identified areas of good quality habitats • Has connectivity in only one stratum layer • The vegetation communities within the corridor are in moderate condition • There is some evidence of fragmentation or edge-effects, however largely intact.	**Moderate**	Considered high risk of impact to connectivity if the below criteria are met: • If the proposed full vegetation clearance will partially segment the remnant, or partially isolate an area of habitat (localised impacts) • If connectivity is to be maintained in at least one stratum layer • If vegetation clearance, is likely to partially impede, or affect fauna movement.
Low	Considered to have **low connectivity** if the below criteria have been met: • Limited connectivity with the broader landscape, signs of fragmentation and devoid of native vegetation	**Low**	Considered low risk of impact to connectivity if the below criteria are met: • If the proposed construction footprint largely avoids any areas of connected, good quality habitat

Existing connectivity	Criteria for existing connectivity	Risk of impact to connectivity	Criteria for risk of impacts to connectivity
	• Field-based data has identified areas of low-quality habitats, and observations of degradation • The vegetation communities within the corridor are non-native, or in low to degraded condition • Low fauna activity, or limited records in the locality.		• If the habitat is already effectively isolated, of low quality or degraded. If vegetation clearance, is likely to partially impede, or affect fauna movement.

Candidate threatened fauna with habitat within or adjacent to connectivity locations are identified in Table A21- 7. Species with restricted home ranges (i.e., < 1kilometre) are shown in bold.

Mitigation measures proposed to address potential project impacts to habitat connectivity are outlined and include species-specific measures to address residual impacts to candidate species where relevant. The recommended mitigation measures should be prioritised within connectivity corridors supporting moderate to high levels of existing connectivity identified as a having a moderate to high risk of impact.

Table A21- 7: Habitat connectivity corridors, risks, and mitigation measures

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_26	High	Koala Swift Parrot Little Eagle	Moderate	<u>High connectivity</u> The vegetation within the corridor mostly consists of good to very good condition grassy woodland (PCTs 314 and 316). <u>Moderate risk of impact</u> Connectivity will be partially reduced in a north-south direction.	• Design vegetation stepping-stones to maintain connectivity • Pre-construction surveys and micro-siting.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
BON_1	High	Gang-gang Cockatoo (confirmed sightings) Powerful Owl (confirmed sightings) Barking Owl Eastern Pygmy-possum Little Eagle Southern Myotis Pink Robin Koala	Moderate	<u>High connectivity</u> The corridor is comprised of a matrix of non-native, moderate to good condition wet sclerophyll forest and dry sclerophyll forest (shrubby sub formation) (PCTs 295 and 199). <u>Moderate risk of impact</u> Partial loss of connectivity is expected in the south-east of the corridor. North-west connectivity will be retained.	• Pre-construction surveys and micro-siting • Reduced vegetation clearance footprints where possible.	No	Bondo
BON_2	High	Little Eagle Swift Parrot Koala Eastern Pygmy-possum Southern Myotis Pink Robin **Pink-tailed Legless Lizard** Bush-stone Curlew Square-tailed Kite Grey-headed Flying-fox	Moderate	<u>High connectivity</u> The vegetation corridor in the locality consists of non-native vegetation, and PCTs 314, 306, 299, and 278, and is connected to remnants in the broader surrounds (patch size >100 ha). <u>Moderate risk of impact</u> The Indicative disturbance area is primarily along the northern edge of the remnant and is unlikely to reduce connectivity significantly, but rather increase edge effects.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/ logs as habitat).	No	Bondo
BUN_1	Low	Regent Honeyeater **Pink-tailed Legless Lizard** **Striped Legless Lizard** Swift Parrot.	Low	<u>Low connectivity</u> The existing landscape connectivity is low, and high fragmented. <u>Low risk of impact</u>	No mitigation measures required.	No	Bungonia

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
				The proposed clearing is localised, and in degraded habitat. It is unlikely to impede local or regional fauna movement. Furthermore, associated candidate bird species in this locality are highly mobile.			
BUN_10	High	Masked Owl Regent Honeyeater Gang-gang Cockatoo Glossy-Black Cockatoo Little Eagle Swift Parrot Barking Owl Powerful Owl Koala Grey-headed Flying-fox	Moderate	<u>High connectivity</u> The vegetation corridor in the locality consists of PCTs 314, 306, 299, and 278 in various conditions, and is connected to remnants in the broader surrounds (patch size > 100 ha). <u>Moderate risk of impact</u> The risk of reduced connectivity is considered moderate with full, and easement clearance and hazard tree removal. Some connectivity will persist; however, mitigation measures should be adopted to facilitate fauna movement in the location.	• Design vegetation stepping-stones to maintain connectivity • Pre-construction surveys and micro-siting.	No	Bungonia

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
BUN_11	Moderate	Gang-gang Cockatoo (multiple records) Little Eagle **Striped Legless Lizard** Koala Regent Honeyeater **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Swift Parrot Barking Owl Masked Owl Powerful Owl Greater Glider Squirrel Glider	Moderate	Moderate connectivity The vegetation corridor in the locality consists of PCTs 314, 306, 299, and 278 in low and moderate conditions, with some fragmentation evident. Moderate risk of impact Full easement clearance is proposed through the remnant. However, connectivity will be retained in the north-west portion and is unlikely to act as a barrier to fauna movement.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/ logs as habitat).	No	Bungonia
BUN_2	Low	Regent Honeyeater **Pink-tailed Legless Lizard** **Striped-legless Lizard** Swift Parrot	Low	Low connectivity The existing landscape connectivity is low, and high fragmented. Low risk of impact The risk to fauna connectivity is low. The remnant is highly fragmented in this locality, and the clearing footprint primarily avoids the vegetation corridor.	No mitigation measures required.	No	Bungonia
BUN_3	Low	Regent Honeyeater **Pink-tailed Legless Lizard** **Striped-legless Lizard** Swift Parrot	Low	Low connectivity The existing landscape connectivity is low, and high fragmented. Low risk of impact The risk to fauna connectivity is low. The remnant is highly fragmented in this locality,	No mitigation measures required.	No	Bungonia

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
				and the clearing footprint primarily avoids the vegetation corridor.			
BUN_4	Low	Regent Honeyeater **Pink-tailed Legless Lizard** **Striped-legless Lizard** Swift Parrot	Low	<u>Low connectivity</u> The remnant is highly fragmented and degraded in this locality. <u>Low risk of impact</u> The risk to fauna connectivity is low. The Indicative disturbance area primarily avoids the vegetation corridor.	No mitigation measures required.	No	Bungonia
BUN_5	Low	Swift Parrot **Striped Legless Lizard** **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper**	Low	<u>Low connectivity</u> The remnant of low-condition PCT 1330 is severely fragmented in the locality. <u>Low risk of impact</u> The proposed clearing on the edge of the remnant is unlikely to significantly impede fauna movement.	No mitigation measures required.	No	Bungonia

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
BUN_6	Moderate	Gang-gang Cockatoo Regent Honeyeater Glossy-Black Cockatoo Little Eagle Swift Parrot Stuttering Frog Southern Myotis Barking Owl Powerful Owl Greater Glider Squirrel Glider Koala Masked Owl	Moderate	Moderate connectivity In this location there is moderate to high east-west connectivity with the broader landscape, and the patch is connected to remnants in the broader landscape (> 50 ha). Moderate risk of impact The proposed vegetation clearance in the locality is likely to partially segment the remnant (localised impacts).	• Spanning of infrastructure above canopy (avoidance of clearing) • Design vegetation stepping-stones to maintain connectivity • Pre-construction surveys and micro-siting.	No	Bungonia
BUN_7	High	Gang-gang Cockatoo Glossy-Black Cockatoo Little Eagle Swift Parrot Stuttering Frog Barking Owl Powerful Owl Greater Glider (confirmed) Squirrel Glider Pink Robin Koala Grey-headed Flying-fox Masked Owl Large Bentwing-bat (confirmed, foraging only)	High	High connectivity In this location there is high east-west connectivity with the broader landscape, and the patch is connected to remnants in the broader landscape (> 100 ha). High risk of impact This location is confirmed habitat for Greater Glider, and the proposed easement will dissect the remnant in two, effectively creating a 70 – 80 m gap between habitats.	• Pre-construction surveys and micro-siting • Reduced vegetation clearance • Installation of artificial connectivity structures (Glider Poles) • Design vegetation stepping-stones to maintain connectivity	**Glider Corridor**	Bungonia

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
BUN_8	High	Masked Owl Regent Honeyeater Gang-gang Cockatoo (confirmed present) Glossy-Black Cockatoo Little Eagle Swift Parrot Barking Owl Powerful Owl Koala Grey-headed Flying-fox	Moderate	<u>High connectivity</u> In this location there is high east-west, and south-east connectivity with the broader landscape, and the patch is connected to remnants in the broader landscape (> 100 ha). <u>Moderate risk of impact</u> The Indicative disturbance area is on the edge of a large remnant, and therefore, unlikely to pose a high risk to fauna movement. It will, however, increase forest edge effects, and localised habitat impacts.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Bungonia
BUN_9	Low	Swift Parrot	Low	<u>Low connectivity</u> The remnant is highly fragmented and degraded in this locality. <u>Low risk of impact</u> The risk to fauna connectivity is low. The remnant is highly fragmented in this locality, and Indicative disturbance area primarily avoids the vegetation corridor.	No mitigation measures required.	No	Bungonia
CRO_1	Moderate	Regent Honeyeater Koala Grey-headed Flying-fox	Moderate	<u>Moderate connectivity</u> The remnant consists of PCT 731 in moderate and low condition, and PCT 335 in high condition. Connectivity is primarily around the riparian corridor, and there is some	• Pre-construction surveys and micro-siting • Co-location of clearing footprint to existing easement.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
				minor evidence of fragmentation. <u>Moderate risk of impact</u> Potential for design changes to follow the existing easement clearing in this locality.			
CRO_11	Low	**Striped Legless Lizard** Little Eagle Regent Honeyeater **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Koala Grey-headed Flying-fox	Low	<u>Low connectivity</u> The remnant is highly fragmented and degraded in this locality. <u>Low risk of impact</u> The existing remnant is highly fragmented. The Indicative disturbance area is on the edge of the remnant and is unlikely to inhibit fauna movement.	No mitigation measures required.	No	Crookwell
CRO_11	Low	**Striped Legless Lizard** Little Eagle Regent Honeyeater **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Koala Grey-headed Flying-fox	Low	<u>Low connectivity</u> The corridor consists of PCT 1330, and in low condition. The existing connectivity is generally low. <u>Low risk of impact</u> The proposed impacts to fauna connectivity are considered low. The remnant is highly fragmented in this locality, and the clearing footprint primarily avoids the vegetation corridor.	No mitigation measures required.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
CRO_12	Moderate	Regent Honeyeater Little Eagle **Key's Matchstick Grasshopper** Koala **Striped Legless Lizard** Grey-headed Flying-fox	Low	<u>Moderate connectivity</u> The remnant consists of PCT 1330 in good condition and non-native roadside vegetation, with some connectivity with the broader landscape. <u>Low risk of impact</u> Given the Indicative disturbance area is primarily on the edge of the remnant the risk to fauna connectivity is considered low.	No mitigation measures required.	No	Crookwell
CRO_13	Moderate	Grey-headed Flying-fox Regent Honeyeater **Pink-tailed Legless Lizard** **Eastern Pygmy-possum** Little Eagle Key's Matchstick Grasshopper Koala	Moderate	<u>Moderate connectivity</u> Scattered remnants of PCT 283 in moderate condition. There is some connectivity along the riparian corridor that intersects the project footprint. <u>Moderate risk of impact</u> The Indicative disturbance area (full clearance) is unlikely to inhibit fauna movement in the locality, however there will be a partial loss to connectivity.	• Pre-construction surveys and micro-siting	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
CRO_14	Moderate	Regent Honeyeater **Eastern Pygmy-possum** Little Eagle Koala	Low	Moderate connectivity Scattered remnants of PCT 283 in moderate condition. There is some connectivity along the riparian corridor that intersects the project footprint. Low risk of impact The proposed Indicative disturbance area is on the edge of the remnant and will not inhibit fauna movement in the locality.	No mitigation measures required.	No	Crookwell
CRO_15	Low	Koala Regent Honeyeater	Low	Low connectivity The remnant is highly fragmented and degraded in this locality. Low risk of impact The Indicative disturbance area is within a scattered remnant; however, the proposed clearing is unlikely to inhibit fauna movement in the locality.	No mitigation measures required.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
CRO_16	Low	Regent Honeyeater Little Eagle **Key's Matchstick Grasshopper** Koala Gang-gang Cockatoo Glossy-Black Cockatoo **Striped Legless Lizard** Powerful Owl Greater Glider Squirrel Glider Swift Parrot Grey-headed Flying-fox	Low	Low connectivity The remnant is highly fragmented and degraded in this locality. Low risk of impact The Indicative disturbance area is within a scattered remnant; however, the proposed clearing is unlikely to inhibit fauna movement in the locality.	• Pre-construction surveys and micro-siting • Reduced vegetation clearance.	No	Crookwell
CRO_17	Moderate	Regent Honeyeater **Key's Matchstick's Grasshopper** Koala **Striped Legless Lizard** Powerful Owl Greater Glider Squirrel Glider	Moderate	Moderate connectivity The remnant has moderate connectivity, with some hazard tree, partial removal and full clearance proposed. Moderate risk of impact The Indicative disturbance area will result in reduced connectivity.	• Pre-construction surveys and micro-siting • Reduced vegetation clearance • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Crookwell
CRO_18	Moderate	**Striped Legless Lizard** Little Eagle Regent Honeyeater **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Koala Grey-headed Flying-fox	Low	Moderate connectivity The remnant has moderate connectivity, with some hazard tree, partial removal and full clearance proposed. Low risk of impact The Indicative disturbance area is on the edge of the remnant, and therefore, fauna movement is unlikely to be inhibited in this locality.	No mitigation measures required.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
CRO_2	Moderate	Squirrel Glider Koala	Moderate	Moderate connectivity The remnant has moderate connectivity, with some hazard tree, partial removal and full clearance proposed. Low risk of impact The Indicative disturbance area will result in reduced connectivity.	• Design vegetation stepping-stones to maintain connectivity • Pre-construction surveys and micro-siting • Design refinement.	No	Crookwell
CRO_3	Moderate	Squirrel Glider Koala	Low	Moderate connectivity The remnant has moderate connectivity, with some hazard tree, partial removal and full clearance proposed. Low risk of impact The risk to connectivity is relatively low in this locality, given that portions of the remnant are fragmented and the Indicative disturbance area, mostly follows the cleared areas.	No mitigation measures required.	No	Crookwell
CRO_4	Moderate	Gang-gang Cockatoo Little Eagle Regent Honeyeater Koala Grey-headed Flying-fox	Low	Moderate connectivity The remnant has moderate connectivity, with some hazard tree, partial removal and full clearance proposed. Low risk of impact The risks to connectivity are considered low. The remnant is connected in northwest-southeast directions. The Indicative disturbance area will not inhibit fauna	No mitigation measures required.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
				movement throughout the landscape.			
CRO_5	Moderate	**Booroolong Frog** **Eastern Pygmy-possum** Little Eagle Koala	Moderate	<u>Moderate connectivity</u> The remnant has moderate connectivity along the riparian corridor, with some hazard tree, partial removal and full clearance proposed. <u>Moderate risk of impact</u> The risk to riparian connectivity in the locality is moderate. The clearing impacts are localised and unlikely to inhibit fauna movement in the locality. However, Booroolong Frog habitat has been mapped in the locality, and therefore, the establishment of biodiversity protection zone, is recommended.	• Pre-construction surveys and micro-siting • Establishment of species biodiversity protection zone.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
CRO_6	Moderate	Gang-gang Cockatoo Little Eagle Regent Honeyeater **Eastern Pygmy-possum** Powerful Owl Greater Glider Squirrel Glider Koala Grey-headed Flying-fox	Low	Moderate connectivity The remnant is large with moderate to high connectivity with the broader landscape. Low risk of impact The risks to fauna connectivity are considered low. The remnant is large with moderate to high connectivity, and the proposed clearing impacts are localised, and unlikely to impede fauna movement.	No mitigation measures required.	No	Crookwell
CRO_7	Low	Little Eagle Regent Honeyeater Koala Grey-headed Flying-fox	Low	Low connectivity The remnant is moderately fragmented. The vegetation consists of PCT 1093 (high and very low condition). Low risk of impact The clearing required is localised and will not inhibit fauna movement within the locality.	No mitigation measures required.	No	Crookwell
CRO_8	Low	Little Eagle Regent Honeyeater Koala Grey-headed Flying-fox	Low	Low connectivity The remnant is highly fragmented and degraded in this locality. Low risk of impact The risks to connectivity are low (proposed clearing on the edge of the isolated remnant).	No mitigation measures required.	No	Crookwell

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
CRO_9	Low	Regent Honeyeater **Pink-tailed Legless Lizard** Little Eagle **Key's Matchstick Grasshopper** Koala Gang-gang Cockatoo Glossy-Black Cockatoo **Striped Legless Lizard** Powerful Owl Greater Glider Squirrel Glider	Moderate	<u>Low connectivity</u> The remnant is highly fragmented and degraded in this locality. <u>Moderate risk of impact</u> The proposed Indicative disturbance area in this locality will reduce overall connectivity in the southern portion of the patch and reduce the overall dispersibility of small terrestrial fauna species.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Crookwell
INL_1	Low	**Key's Matchstick Grasshopper** Swift Parrot **Pink-tailed Legless Lizard** **Striped Legless Lizard** Koala Squirrel Glider Superb Parrot Gang-gang Cockatoo Little Eagle Square-tailed Kite Barking Owl Masked Owl Regent Honeyeater Bush-stone Curlew	Low	<u>Low connectivity</u> There is low riparian connectivity along Cooks Creek (consisting of PCT 277 and 278). <u>Low risk of impact</u> Partial clearing and hazard tree removal are proposed, however, the impacts to connectivity are considered low.	No mitigation measures required.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_10	Moderate	Square-tailed Kite Swift Parrot Regent Honeyeater **Pink-tailed Legless Lizard** Bush-stone Curlew Gang-gang Cockatoo Little Eagle Barking Owl Squirrel Glider Koala Masked Owl	Moderate	Moderate connectivity The fauna corridor consists of grassy woodland and derived native grasslands and is connected to Killimicat Creek and Mudjarn Nature Reserve. Moderate risk of impact The proposed clearing requirements will impede fauna movement to the south-east of the project footprint.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Inland Slopes
INL_11	Moderate	Swift Parrot Regent Honeyeater Sloane's Froglet Koala Little Eagle **Key's Matchstick Grasshopper** Square-tailed Kite	Low	Moderate connectivity The connectivity in the locality is primarily the riparian corridors of the Tumut River and Gocup River. Low risk of impact Partial clearing and hazard tree removal are proposed, however, the impacts to connectivity are considered low.	No mitigation measures required.	No	Inland Slopes
INL_13	Low	Swift Parrot Regent Honeyeater Sloane's Froglet Southern Myotis Squirrel Glider Koala Superb Parrot Grey-headed Flying-fox	Low	Low connectivity The riparian corridor of Sandy Creek consists of PCT 5. Low risk of impact The proposed works in this locality consists of easement clearing, hazard tree removal and spanning.	No mitigation measures required.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_14	Moderate	Little Eagle Swift Parrot Koala	Low	Moderate connectivity The vegetation consists of non-native and PCT 306 in the locality and has moderate connectivity. Low risk of impact The clearing required will result in an increased fragmentation, however, is unlikely to impede fauna movement in the locality. Furthermore, spanning will be used.	No mitigation measures required.	No	Inland Slopes
INL_15	Moderate	Little Eagle Swift Parrot Koala **Eastern Pygmy-possum**	Moderate	Moderate connectivity The vegetation in the locality consists of PCT 314. Moderate risk of impact There will be hazard tree removal, easement, and full clearance, which may inhibit movement in a north-south direction in some locations, however, unlikely to fully isolate individuals.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/ logs as habitat).	No	Inland Slopes
INL_16	Low	Koala Square-tailed Kite Regent Honeyeater **Pink-tailed Legless Lizard** Bush-stone Curlew Little Eagle Swift Parrot	Moderate	Low connectivity The patch of PCT 280 is effectively isolated (low connectivity). Moderate risk of impact The proposed clearing footprint runs parallel to an existing easement, the additional clearing will further	• Reduced vegetation clearance • Design vegetation stepping-stones to maintain connectivity • Design and installation of ground refugia (creation and re-use of timber/ logs as habitat) • Co-location of clearing footprint to existing easement.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
				isolate remnants on either side.			
INL_17	High	**Pink-tailed Legless Lizard** Little Eagle Swift Parrot Koala	Moderate	<u>High connectivity</u> The corridor consists of PCTs 280, 290, 297 and 288, with high connectivity with the broader landscape. <u>Moderate risk of impact</u> Connectivity in a north-south direction is likely to be reduced by the proposed clearing.	• Pre-construction surveys and micro-siting	No	Inland Slopes
INL_18	Low	Grey-headed Flying-fox Swift Parrot Sloane's Froglet **Pink-tailed Legless Lizard** Little Eagle **Key's Matchstick Grasshopper** Square-tailed Kite Koala	Low	<u>Low connectivity</u> Low conductivity along the riparian corridor, but highly fragmented. <u>Low risk of impact</u> The risk of further reducing riparian connectivity is considered low, due to spanning and avoidance of clearing.	No mitigation measures required.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_19	Low	Swift Parrot Regent Honeyeater Squirrel Glider Koala **Striped Legless Lizard** **Key's Matchstick Grasshopper** **Pink-tailed Legless Lizard** Gang-gang Cockatoo Superb parrot Square-tailed Kite Bush-stone Curlew Little Eagle	Low	<u>Low connectivity</u> The vegetation consists of PCT 268, the canopy is sparse and scattered in portions of the corridor, with evidence of previous clearing. <u>Low risk of impact</u> The Indicative disturbance area may inhibit movement in portions of the corridor.	No mitigation measures required.	No	Inland Slopes
INL_2	Low	Koala **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Swift Parrot Squirrel Glider Superb Parrot	Low	<u>Low connectivity</u> Connectivity is restricted to the riparian corridor of Fairy Hole Creek. The vegetation consists of PCT 278 (moderate condition). <u>Low risk of impact</u> Clearing included partial easement clearing and hazard tree removal, however, is unlikely to impede fauna movement.	• Pre-construction surveys and micro-siting • Spanning of infrastructure above canopy (avoidance of clearing).	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_20	Moderate	Swift Parrot Regent Honeyeater Bush-stone Curlew Gang-gang Cockatoo **Striped Legless Lizard** Little Eagle **Key's Matchstick Grasshopper** Square-tailed Kite Barking Owl Squirrel Glider Koala Superb Parrot Masked Owl	Low	Moderate connectivity The corridor is partially fragmented, but with some connectivity with the broader landscape. Low risk of impact Where the Indicative disturbance area is proposed, it is unlikely to significantly impede fauna movement, and connectivity in the locality.	• Design and installation of ground refugia (creation and re-use of timber/ logs as habitat). • Pre-construction surveys and micro-siting.	No	Inland Slopes
INL_21	Low	Regent Honeyeater Bush-stone Curlew **Key's Matchstick Grasshopper** **Striped Legless Lizard** Little Eagle Swift Parrot Square-tailed Kite Koala Grey-headed Flying-fox	Low	Low connectivity Low conductivity along the riparian corridor, but highly fragmented. Low risk of impact The existing corridor is fragmented. However, the Indicative disturbance area is unlikely to be fragmented further.	No mitigation measures required.	No	Inland Slopes
INL_23	Moderate	Regent Honeyeater Swift Parrot Southern Myotis Koala Grey-headed Flying-fox	Moderate	Moderate connectivity The connectivity is restricted to the riparian corridor (PCT 5). Moderate risk of impact The proposed clearing may reduce movement for some smaller, less transient species.	• Reduced vegetation clearance • Spanning of infrastructure above canopy (avoidance of clearing)	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_24	Low	**Key's Matchstick Grasshopper** **Pink-tailed Legless Lizard** **Striped Legless Lizard** Swift Parrot	Low	Low connectivity The corridor is disturbed, and consists of low-condition PCT 277, and non-native vegetation. Low risk of impact The proposed clearing is unlikely to impede fauna movement in the locality.	No mitigation measures required.	No	Inland Slopes
INL_25	Moderate	Booroolong Frog **Pink-tailed Legless Lizard** Regent Honeyeater Southern Myotis Glossy Black-Cockatoo Koala	Moderate	Booroolong Frog habitat (DPE mapping) in the locality. Establishment of species biodiversity protection zone within the riparian corridor is recommended.	• Pre-construction surveys and micro-siting • Establishment of species biodiversity protection zone.	No	Inland Slopes
INL_3	Low	Swift Parrot Superb Parrot Grey-headed Flying-fox	Low	Low connectivity The riparian corridor consists of non-native vegetation and low-condition PCT 277. Low risk of impact There is no proposed work in this locality that will impact connectivity.	No mitigation measures required.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_4	Moderate	**Striped Legless-Lizard** **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Koala Southern Myotis Grey-headed Flying-fox Golden Sun Moth Regent Honeyeater Swift Parrot	Low	Moderate connectivity The connectivity is restricted to the riparian corridor (PCT 5). Low risk of impact Riparian connectivity along the Murrumbidgee River is unlikely to impede fauna movement significantly due to spanning.	No mitigation measures required.	No	Inland Slopes
INL_5	Moderate	Swift Parrot **Key's Matchstick Grasshopper** Regent Honeyeater **Pink-tailed Legless Lizard** Bush-stone Curlew Gang-gang Cockatoo Glossy-Black Cockatoo Sloane's Froglet Little Eagle Square-tailed Kite Barking Owl Masked Owl Squirrel Glider Koala Superb Parrot Grey-headed Flying-fox	Low	Moderate connectivity The corridor is partially fragmented, but with some connectivity with the broader landscape. Low risk of impact The risk to existing fauna connectivity in the locality is low. The area within the Indicative disturbance area, is already fragmented.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_6	Moderate	Southern Myotis (confirmed) Large Bentwing-bat (foraging-confirmed) Gang-gang Little Eagle Square-tailed Kite Barking Owl Masked owl Squirrel Glider Bush-stone Curlew Swift Parrot **Key's Matchstick Grasshopper** Regent Honeyeater **Pink-tailed Legless Lizard** Glossy Black Cockatoo Koala Superb Parrot	Moderate	<u>Moderate connectivity</u> The corridor is partially fragmented, but with some connectivity with the broader landscape. <u>Moderate risk of impact</u> High-condition grassy woodland (PCT 266) to be segmented. However, the proposed clearing may inhibit some localised fauna movement.	• Pre-construction surveys and micro-siting • Design vegetation stepping-stones to maintain connectivity • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).		Inland Slopes
INL_7	Moderate	**Pink-tailed Legless Lizard** Gang-gang Cockatoo Little Eagle **Key's Matchstick Grasshopper** Swift Parrot Square-tailed Kite Barking Owl Squirrel Glider Superb Parrot	Low	<u>Moderate connectivity</u> Consists of moderate-condition grassy woodland habitat along the riparian corridor (PCT 278). <u>Low risk to connectivity</u> There are minimal risks to connectivity in the locality.	No mitigation measures required.	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
INL_8	Low	**Key's Matchstick Grasshopper** Regent Honeyeater Bush-stone Curlew Koala Swift Parrot **Striped Legless Lizard** Little Eagle Square-tailed Kite Grey-headed Flying-fox **Pink-tailed Legless Lizard**	High	Moderate connectivity The connectivity is restricted to the riparian corridor (PCT 5). High risk of impact The Indicative disturbance area will reduce connectivity in the locality (riparian crossing).	• Design and installation of ground refugia (creation and re-use of timber/logs as habitat) • Pre-construction surveys and micro-siting • Investigation into appropriate deterrent devices is recommended.		Inland Slopes
INL_9	Moderate	Gang-gang Cockatoo (confirmed) Powerful Owl (confirmed) Swift Parrot **Pink-tailed Legless Lizard** Regent Honeyeater Bush-stone Curlew **Eastern Pygmy-possum** Little Eagle Square-tailed Kite Koala Grey-headed Flying-fox	High	Moderate connectivity The connectivity within the locality is comprised of a matrix of non-native vegetation, native grasslands, and grassy woodlands (PCTs 268, 278, 280). High risk of impact The Indicative disturbance area has the potential to reduce connectivity in a south-west direction.	• Design vegetation stepping-stones to maintain connectivity • Pre-construction surveys and micro-siting	No	Inland Slopes

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
MUR_1	Moderate	Swift Parrot Square-tailed Kite Grey-headed Flying-fox Regent Honeyeater Gang-gang Cockatoo **Eastern Pygmy-possum** Little Eagle **Key's Matchstick's Grasshopper** Powerful Owl Squirrel Glider Koala	Moderate	Moderate connectivity The corridor is partially fragmented, but with some connectivity with the broader landscape. Moderate risk of impact There is a moderate risk of reduced fauna connectivity in the locality.	• Pre-construction surveys and micro-siting • Spanning of infrastructure above canopy (avoidance of clearing).	No	Murrumbateman
MUR_10	Low	**Pink-tailed Legless Lizard** Swift Parrot Regent Honeyeater Gang-gang Cockatoo Little Eagle Square-tailed Kite Squirrel Glider Koala Superb Parrot	Low	Low connectivity The existing connectivity is low to moderate. Low risk of impact The proposed work within the locality is unlikely to impede fauna movement.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Murrumbateman

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
MUR_11	Low	**Striped Legless Lizard** **Pink-tailed Legless Lizard** **Key's Matchstick Grasshopper** Southern Myotis Koala Grey-headed Flying-fox Golden Sun Moth Regent Honeyeater Swift Parrot	Moderate	Low connectivity The connectivity corridor consists of riparian and grassland habitats in the locality. Moderate risk of impact The proposed construction in this location will reduce riparian connectivity (water crossing), and grassland connectivity.	• Pre-construction surveys and micro-siting • Design and installation of ground refugia (creation and re-use of timber/logs as habitat).	No	Murrumbateman
MUR_2	Moderate	Large Bent-winged Bat (foraging only) Squirrel Glider (confirmed present) Gang-gang Cockatoo **Striped Legless Lizard** Regent Honeyeater **Eastern Pygmy-possum** Little Eagle **Key's Matchstick Grasshopper** Swift Parrot Southern Myotis Powerful Owl Greater Glider Koala Superb Parrot Grey-headed Flying-fox Glossy-Black Cockatoo	High	Moderate connectivity The corridor is partially fragmented, but with some connectivity with the broader landscape. High risk of impact The risk of impacts to connectivity are considered high. Connectivity structures should be considered in this location to facilitate fauna movement, such as stepping-stone vegetation, ground refugia, glider poles, and if possible, reduce overall clearing in this area.	• Design and installation of ground refugia (creation and re-use of timber/logs as habitat) • Artificial connectivity structures (glider poles) • Reduce vegetation clearing requirements, Pre-construction surveys and micro-siting.	**Glider Corridor**	Murrumbateman

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
MUR_3	Moderate	Little Eagle (confirmed) Gang-gang Cockatoo **Striped Legless Lizard** Regent Honeyeater Eastern Pygmy-possum **Key's Matchstick Grasshopper** Swift Parrot Southern Myotis Powerful Owl Greater Glider Squirrel Glider Koala Superb Parrot	Moderate	Moderate connectivity The corridor is partially fragmented, but with some connectivity with the broader landscape. Moderate risk of impact The risk of reduced fauna connectivity is moderate (areas of partial and full clearing, and hazard tree removal). Some connectivity will be retained.	• Design vegetation stepping-stones to maintain connectivity • Pre-construction surveys and micro-siting	No	Murrumbateman
MUR_4	Moderate	Regent Honeyeater Gang-gang Cockatoo Glossy-Black Cockatoo Little Eagle Swift Parrot Square-tailed Kite Powerful Owl Greater Glider Squirrel Glider Koala	Low	Moderate connectivity The corridor is partially fragmented, but with some connectivity with the broader landscape. Low risk of impact The risk of reduced connectivity is considered low (only a small area of full clearance is required).	• Pre-construction surveys and micro-siting • Design vegetation stepping-stones to maintain connectivity.	No	Murrumbateman

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
MUR_5	High	**Eastern Pygmy-possum** Powerful Owl Regent Honeyeater Gang-gang Cockatoo (confirmed) Glossy-Black Cockatoo Little Eagle Swift Parrot Square-tailed Kite Squirrel Glider Koala Greater Glider.	Moderate	<u>High connectivity</u> In this location there is high east-west, and south-east connectivity with the broader landscape, and the patch is connected to remnants in the broader landscape (> 100 ha). <u>Moderate risk of impact</u> The proposed clearing requirements (full and partial clearing, and hazard tree removal) pose a moderate risk to fauna connectivity, if not mitigated appropriately.	• Design vegetation stepping-stones to maintain connectivity.	No	Murrumbateman
MUR_6	Moderate	Regent Honeyeater **Pink-tailed Legless Lizard** Gang-gang Cockatoo Glossy-Black Cockatoo **Striped Legless Lizard** Little Eagle **Key's Matchstick Grasshopper** Swift Parrot Southern Myotis Powerful Owl Greater Glider Squirrel Glider Koala Superb Parrot (confirmed)	Moderate	<u>Moderate connectivity</u> The scattered remnant appears to have moderate to high connectivity with the broader landscape (Bango Nature Reserve). <u>Moderate risk of impact</u> The proposed clearing requirements (full and partial clearing, and hazard tree removal) pose a moderate risk to fauna connectivity, if not mitigated appropriately. Stepping habitat/ground refugia to be implemented to maintain the corridor. Also, Superb Parrot was observed in this locality.	• Review of nearby records (for fauna injury/mortality records) • Design and installation of ground refugia (creation and re-use of timber/logs as habitat) • Pre-construction surveys and micro-siting.	No	Murrumbateman

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
MUR_7	Moderate	**Key's Matchstick Grasshopper** **Golden Sun Moth** **Pink-tailed Legless Lizard** **Striped Legless Lizard** Swift Parrot Yellow-spotted Tree Frog Gang-gang Cockatoo Glossy-Black Cockatoo Regent Honeyeater **Eastern Pygmy-possum** Grey-Headed Flying-fox Little Eagle Southern Myotis Koala Powerful Owl Squirrel Glider Superb Parrot	Moderate	Moderate connectivity Moderate connectivity along riparian corridors, and moderate risk to connectivity. Moderate risk of impact The proposed clearing requirements (full and partial clearing, and hazard tree removal) pose a moderate risk to fauna connectivity, if not mitigated appropriately.	• Design vegetation/remnant stepping-stones • Spanning of infrastructure above canopy (avoidance of clearing) • Investigation into appropriate deterrent devices is recommended.	No	Murrumbateman
MUR_8	Low	Little Eagle Swift Parrot Koala Grey-headed Flying-fox	Low	Low connectivity The remnant is fragmented, and the existing connectivity is considered low. Low risk of impact Minimal clearing is proposed in this location, and therefore the risk of reduced connectivity is considered low.	• Pre-construction surveys and micro-siting.	No	Murrumbateman

Corridor ID	Existing connectivity	Associated candidate species	Risk of impacts to connectivity	Existing connectivity and risk of impact	Recommended mitigation measures	Glider Corridor	IBRA subregion
MUR_9	Moderate	Little Eagle **Pink-tailed Legless Lizard** Swift Parrot Koala	Low	Moderate connectivity The remnant consists of PCT 351 in moderate condition. Low risk of impact The clearing required includes full and partial clearing, and hazard tree removal. However, moderate connectivity should be maintained.	• Pre-construction surveys and micro-siting • Spanning of infrastructure above canopy (avoidance of clearing).	No	Murrumbateman
SNO_1	High	Gang-gang Cockatoo (multiple records) Barking Owl (confirmed) Greater Glider (confirmed) Pink Robin Little Eagle Square-tailed Kite Koala **Eastern Pygmy-possum** Powerful Owl Squirrel Glider Brush-tailed Phascogale Masked Owl Spotted Tree Frog **Smoky Mouse** Flame Robin (recorded)	Moderate	High connectivity In this location there is high east-west, and south-east connectivity with the broader landscape, and the patch is connected to remnants in the broader landscape (> 100 ha). Moderate risk of impact The remnant is highly connected, with a matrix of dry sclerophyll forest, wet sclerophyll, and montane forests. For small terrestrial species, the proposed clearing has the possibility of isolating individuals, and reducing local fauna movement. Regional fauna movement may also be at risk without appropriate mitigation measures applied.	• Reduced vegetation clearance • Artificial connectivity structures (glider poles) • Design vegetation stepping-stones to maintain connectivity	**Glider Corridor**	Snowy Mountains

4. Collision risks for candidate threatened fauna

The assessment of impacts associated with collision risk, electrocution and entanglement are detailed in Section 12.5.3, Table 13-21 and Table 12-22 of the BDAR and Table A21-8 below. Assessed locations are shown Figure 13-15 and Figure 13-16. Candidate threatened and migratory fauna identified as having a potential risk of collision, entanglement or electrocution as a result of the project are also outlined below.

Criteria used to assess collision, entanglement or electrocution risk is outlined below in Table A21-87.

Table A21- 8: Existing risk collision, entanglement or electrocution criteria

Risk of impact to connectivity	Criteria for risk of impacts to connectivity
High	Considered high risk of collision, entanglement, or electrocution if the below criteria are met: • If the proposed transmission line is within proximity to a large remnant with high connectivity, with multiple avifauna records, including raptors, migratory birds, or Grey-headed Flying-fox records. • If the proposed construction is in proximity of avifauna records with signs of injury, electrocution, or death (BioNet 2023). • Within 1 km of a major waterbody or wetland with multiple waterbird, or migratory bird records. • Less than 10 km from a known flying-fox camp.
Moderate	Considered moderate risk of collision if the below criteria are met: • If the proposed transmission line is within proximity to a large remnant with high connectivity, with several avifauna records, including raptors, migratory birds, or Grey-headed Flying-fox records. • If the proposed construction is in proximity of avifauna records with signs of injury, electrocution, or death (BioNet 2023). • Within 5 km of a major waterbody or wetland with multiple waterbird, or migratory bird records. • Less than 20 km from a known flying-fox camp.
Low	Considered low risk of collision if the below criteria are met: • If there are no nearby records of highly mobile avifauna species (e.g., including raptors, migratory birds, or Grey-headed Flying-fox records). • If the habitat is already effectively isolated, of low quality or degraded.

Mitigation measures proposed to address potential project impacts are outlined and include species-specific measures to address residual impacts where relevant.

Table A21- 9: Terrestrial connectivity impacts – Collison, entanglement, and electrocution

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
INL_26	Swift Parrot Little Eagle	Low	The risk of collision/ entanglement is relatively low in this location due to the existing fragmentation.	No mitigation measures required.	Inland Slopes
BON_1	BAM candidate species Gang-gang Cockatoo (confirmed sightings) Powerful Owl (confirmed sightings) Barking Owl Little Eagle Southern Myotis Pink Robin BioNet records (2023) Grey-headed Flying-fox (multiple records) Migratory species (BioNet 2023) White-throated Needletail Common Sandpiper	Moderate	The risk of collision/ entanglement is considered moderate, with new forest edges and gaps created. Further, migratory waterbirds, Grey-headed Flying-fox and raptors occur in the locality.	• Pre-construction surveys and micro-siting • Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision.	Bondo
BON_2	Little Eagle Swift Parrot Southern Myotis Pink Robin Square-tailed Kite Grey-headed Flying-fox	Low	The risk of collision/ entanglement is relatively low in this location due to the existing fragmentation.	No mitigation measures required.	Bondo
BUN_1	Regent Honeyeater Swift Parrot.	Low	The risk of collision/ entanglement is relatively low in this location due to the existing fragmentation and low avifauna levels observed during surveys.	No mitigation measures required.	Bungonia

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
BUN_10	Masked Owl Regent Honeyeater Gang-gang Cockatoo Glossy-Black Cockatoo Little Eagle Swift Parrot Barking Owl Powerful Owl Grey-headed Flying-fox	Low	The risk of collision is low. No nearby records of migratory birds or raptors.	No mitigation measures required.	Bungonia
BUN_11	Gang-gang Cockatoo (multiple records) Little Eagle Regent Honeyeater Swift Parrot Barking Owl Masked Owl Powerful Owl Greater Glider Squirrel Glider	Low	The risk of collision is low. No nearby records of migratory birds or raptors.	No mitigation measures required.	Bungonia
BUN_2	Regent Honeyeater Swift Parrot	Low	Low risk of entanglement and collision due to the landscape being fragmented and generally low levels of avifauna activity being observed in the locality.	No mitigation measures required.	Bungonia
BUN_3	Regent Honeyeater Swift Parrot	Low	The risk of entanglement is low in the locality. Highly fragmented landscape and low levels of avifauna activity, generally.	No mitigation measures required.	Bungonia
BUN_4	Regent Honeyeater Swift Parrot	Low	The risk of entanglement is low in the locality. Highly fragmented landscape and low levels of avifauna activity, generally.	No mitigation measures required.	Bungonia

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
BUN_5	Swift Parrot	Low	The risk of entanglement is low in the locality. The remnant is moderate to severely fragmented and avifauna levels are generally low in the locality.	No mitigation measures required.	Bungonia
BUN_6	Gang-gang Cockatoo Regent Honeyeater Glossy-Black Cockatoo Little Eagle Swift Parrot Southern Myotis Barking Owl Powerful Owl Greater Glider Squirrel Glider Masked Owl	Moderate	The transmission line is to dissect a large woodland remnant, with moderate to high avifauna activity observed.	• Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision. Pre-construction surveys and micro-siting.	Bungonia
BUN_7	Gang-gang Cockatoo Glossy-Black Cockatoo Little Eagle Swift Parrot Barking Owl Powerful Owl Greater Glider (confirmed) Squirrel Glider Pink Robin Grey-headed Flying-fox Masked Owl Large Bentwing-bat (confirmed, foraging only) BioNet records (2023) Grey-headed Flying-fox records	High	Large remnant with high connectivity. Multiple Wedge-tailed Eagle, and Grey-headed Flying-fox records in the locality.	• Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision. Pre-construction surveys and micro-siting. • Investigation into appropriate deterrent devices is recommended • Reduced vegetation clearance.	Bungonia

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
BUN_8	Masked Owl Regent Honeyeater Gang-gang Cockatoo (confirmed present) Glossy-Black Cockatoo Little Eagle Swift parrot Barking Owl Powerful Owl Grey-headed Flying-fox	Low	The risk of entanglement is low in the locality. The clearing limits and indicative transmission line structures are on the edge of the remnant, with potential spanning to occur.	No mitigation measures required.	Bungonia
BUN_9	Swift Parrot	Low	The risk of entanglement is low in the locality. No nearby records of avifauna prone to entanglement/ collision (e.g., migratory birds, raptors, or Grey-headed Flying-fox).	No mitigation measures required.	Bungonia
CRO_1	Regent Honeyeater Koala Grey-headed Flying-fox	Low	The risk of entanglement is low in the locality. No nearby records of avifauna prone to entanglement/ collision (e.g., migratory birds, raptors, or Grey-headed Flying-fox).	No mitigation measures required.	Crookwell
CRO_11	Little Eagle Regent Honeyeater Grey-headed Flying-fox	Low	No nearby records of avifauna species that are prone to entanglement/ collision.	No mitigation measures required.	Crookwell
CRO_11	Little Eagle Regent Honeyeater Grey-headed Flying-fox	Low	The risk of entanglement is low in the locality. No nearby at-risk avifauna species records.	No mitigation measures required.	Crookwell

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
CRO_12	Regent Honeyeater Little Eagle Grey-headed Flying-fox	Low	The risk of entanglement is low in the locality. No nearby waterbirds, migratory birds, raptors, or Grey-headed Flying-fox records in the vicinity.	No mitigation measures required.	Crookwell
CRO_13	Grey-headed Flying-fox Regent Honeyeater Little Eagle	Low	The risk of entanglement is low in the locality. No nearby records of avifauna prone to entanglement/ collision (e.g., migratory birds, raptors, or Grey-headed Flying-fox).	No mitigation measures required.	Crookwell
CRO_14	Regent Honeyeater Little Eagle	Low	The risk of entanglement is low in the locality. This is based on review of records, nature of the proposed works and the species habitat that has been mapped.	No mitigation measures required.	Crookwell
CRO_15	Regent Honeyeater	Low	Based on nearby records, and the proposed construction in the locality, the risk of collision/entanglement is considered low.	No mitigation measures required.	Crookwell
CRO_16	Regent Honeyeater Little Eagle Gang-gang Cockatoo Glossy-Black Cockatoo Powerful Owl Greater Glider Squirrel Glider Swift Parrot Grey-headed Flying-fox	Low	Low risk of collision/ entanglement.	No mitigation measures required.	Crookwell

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
CRO_17	Regent Honeyeater Koala Powerful Owl Greater Glider Squirrel Glider	Low	Low risk of collision/ entanglement.	No mitigation measures required.	Crookwell
CRO_18	Striped Legless Lizard Little Eagle Regent Honeyeater Koala Grey-headed Flying-fox	Low	Collision/ entanglement risk is considered low in the locality.	No mitigation measures required.	Crookwell
CRO_2	Squirrel Glider	Low	No nearby records of avifauna prone to collision/ entanglement (e.g., migratory birds, raptors, Grey-headed Flying-fox).	No mitigation measures required.	Crookwell
CRO_3	Squirrel Glider	Low	The risk of collision/entanglement is considered low. No nearby records of migratory birds, raptors, or Grey-headed Flying-fox in the locality.	No mitigation measures required.	Crookwell
CRO_4	Gang-gang Cockatoo Little Eagle Regent Honeyeater Grey-headed Flying-fox	Moderate	The risk of collision and entanglement is considered moderate in the locality (Grey-headed flying-fox habitat is mapped).	• Pre-construction surveys and micro-siting • Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision.	Crookwell
CRO_5	Little Eagle	Low	The risk of collision/ entanglement in this location is considered low. There are no nearby records of avifauna that is prone to entanglement/ collision (e.g., waterbirds, migratory birds, raptors, or flying foxes).	No mitigation measures required.	Crookwell

Corridor ID	Associated candidate species	Risk of collision/ entanglement/ electrocution	Risk of collision/ entanglement/ electrocution justification	Recommended mitigation measures	IBRA subregion
CRO_6	Gang-gang Cockatoo Little Eagle Regent Honeyeater Powerful Owl Greater Glider Squirrel Glider Grey-headed Flying-fox	Low	The risk of collision/ entangling is considered low. Grey-headed flying-fox foraging habitat has been mapped, however, there is no nearby records of avifauna prone to this risk.	No mitigation measures required.	Crookwell
CRO_7	Little Eagle Regent Honeyeater Grey-headed Flying-fox	Moderate	The risk of collision in the locality is moderate (nearby Wedge-tailed Eagle records and Grey-headed Flying-fox records). Resident fauna is likely to become accustomed to these new structures overtime.	• Pre-construction surveys and micro-siting • Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision.	Crookwell
CRO_8	Little Eagle Regent Honeyeater Grey-headed Flying-fox	Moderate	The risk of collision is moderate, with nearby records of Grey-headed Flying-fox and Wedge-tailed Eagle.	• Pre-construction surveys and micro-siting • Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision.	Crookwell
CRO_9	Regent Honeyeater Little Eagle Gang-gang Cockatoo Glossy-Black Cockatoo Powerful Owl Greater Glider Squirrel Glider	Moderate	The risk of collision/ entanglement is considered moderate in the locality. There are waterbird records along the Tarlo River (adjacent to the remnant).	• Pre-construction surveys and micro-siting • Review species wildlife rehabilitation records in the locality to understand areas that are of higher risk of bird-strike/collision. Investigation into appropriate deterrent devices is recommended.	Crookwell

Attachment 22. EPBC Act bushfire impact assessments

This attachment addresses the following component of the Supplementary SEARs (*Guidelines for preparing assessment documentation relevant to the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) for proposals being assessed under the NSW Assessment Bilateral. HumeLink (EPBC 2021/9121)*) assessment requirements:

> *16. Further analysis of the impacts of the 2019-2020 bushfires on EPBC Act listed threatened species and communities should be undertaken during the assessment. Further assessment will determine whether the remaining habitat within the proposed action area is of substantially greater importance to the survival of the listed threatened species following the fires and/or whether the population of the species in the area is considered an important population. This information, once obtained, can be considered when determining avoidance, mitigation and offset measures for these species.*

MNES including threatened species and ecological communities considered likely to occur within the project footprint and for which associated PCTs were severely burnt, has been addressed further below.

1. Threatened ecological communities

Table A22- 1 presents a summary of severely burnt vegetation associated with the EPBC Act listed Threatened Ecological Communities (TEC) occurring within the project footprint. A bushfire impact assessment has been undertaken for each TEC and is presented within Section 1.1 and 1.2 below.

Table A22- 1: Severely burnt PCTs forming an EPBC Act TEC association

TEC	EPBC Act Status*	Associated PCTs severely burnt	Extent TEC severely burnt (ha)			% TEC severely burnt
			BON	INL	SNO	
White Box, Yellow Box, Blakely's Red Gum Grassy Woodland and Derived Native Grassland (Box-Gum Woodland	CE	268	-	27.77	-	3%
Alpine Sphagnum Bogs and Associated Fens	E	939	-	-	1.77	71%

1.1 White Box, Yellow Box, Blakely's Red Gum Grassy Woodland and Derived Native Grassland

Table A22- 2: White Box, Yellow Box, Blakely's Red Gum Grassy Woodland and Derived Native Grassland bushfire impact assessment

MNES	White Box, Yellow Box, Blakely's Red Gum Grassy Woodland and Derived Native Grassland
General	Box-Gum Woodland TEC (EPBC Act) is geographically widespread but highly fragmented throughout Queensland, NSW, ACT and Victoria. In 2010 it was estimated that only 405,000 ha of the ecological community in various condition states remain (Australian Government 2007; DECCW 2010). Thomas *et al.* (2000) estimated that approximately 59,468 hectares remained in south-eastern NSW as of the year 2000, which is less than 4% of its original extent. A suite of fauna are dependent upon Box-Gum Woodland habitat resources for foraging, roosting, nesting, raising young, dispersal, movement and/or migration. These include birds, arboreal and ground-dwelling mammals, reptiles, amphibians and invertebrates. Nectar, an important food resource for fauna, is more abundant on the fertile soils on which Box-Gum Woodland TEC is found. There are 14 EPBC Act-listed flora species and 12 EPBC Act-listed fauna species which are associated with Box-Gum Woodland TEC (DECCW 2010).
Fire Ecology	This ecological community can withstand fire, however the frequency and intensity can influence the degree of recovery. As a rule, TECs have pre-existing and ongoing threats that can reduce their resilience to fire, such as severe drought, fragmentation, soil disturbance, grazing and invasive species (Good & Rumpf 2020). Studies have shown that vegetation recovery is between 5 to 7 years in dry sclerophyll forests, woodlands, and heathlands in the Sydney Basin (van Loon 1977, Conroy 1993, Penman and York 2010, Heath *et al.* 2016). Woodland tree species that can resprout are likely to be resilient to variations in the fire regime in the short to medium (decades) term. For example, Yellow Box *Eucalyptus melliodora* (like many Eucalypts) form a lignotuber which is capable of resprouting after fire, and the thick bark at the base of Yellow Box trees protects them from damage by fire. Fire can provide suitable seedbed conditions, and reduce competition (Graham *et al.* 2013). NPWS (2004) recommend a fire frequency of between 5 and 40 years for grassy woodland ecosystems across NSW.

MNES	White Box, Yellow Box, Blakely's Red Gum Grassy Woodland and Derived Native Grassland
Impact of fires to MNES habitat in the Subject land and locality	It is unknown how many hectares of EPBC-listed Box-Gum Woodland TEC was impacted by the 2019/20 fires, however given its extent throughout NSW, it is likely to be significant. Approximately 959.2 ha of Box gum woodland TEC occurs within the project footprint. Of that, Fire Extent Severity Mapping (FESM)(DPIE 2020f) indicates that approximately 27.77 ha (3%) of the TEC was severely burnt. Bushfire impacts occurred within PCT 268 in the Inland Slopes IBRA Subregion
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The majority (ie 97%) of Box-Gum Woodland TEC within the project footprint was not severely burnt as a result of the 2019/20 fires. Given the extent of the Box-Gum Woodland TEC throughout NSW, it is possible that impacts as a result of the 2019/20 bushfires were more wide-ranging and severe than identified for the project locality. However, associated eucalypt communities are well adapted to fire and likely to regenerate fairly quickly given suitable conditions. Whilst highly mobile fauna species may have become temporarily more reliant on unburnt Box-Gum Woodland within the project footprint post-fire, this reliance would reduce as burnt areas continue to recover.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

1.2 Alpine Sphagnum Bogs and Associated Fens

Table A22- 3: Alpine Sphagnum Bogs and Associated Fen bushfire impact assessment

MNES	Alpine Sphagnum Bogs and Associated Fens
General	The Alpine Sphagnum Bogs and Associated Fens (Bogs and Fens) TEC is usually defined by the presence or absence of Sphagnum (*Sphagnum cristatum*) on a peat substratum. Sphagnum is not always a major floristic component, and there are some sites in the community where Sphagnum has become depleted or been lost as a result of disturbance (DEWHA 2008). The TEC can be easily delineated from other alpine vegetation communities given its unique plant assemblages (TSSC 2009a). The Bogs and Fens TEC has a restricted geographic extent, mostly occurring as small, highly fragmented pockets of isolated remnant vegetation within its known range (DEWHA 2008). The actual area of occupancy is estimated to be approximately 8,000 ha on the mainland (TSSC 2009a). There are few reliable estimates of the current or pre-European extent of the *TEC*. One estimate suggests the current extent is less than half what it was before European settlement, and that only around thirty per cent of this (ie <15% of total extent) could be considered still fully functional. Some experts believe that there are no pristine patches of the Bogs and Fens TEC left on mainland Australia. A large proportion of this TEC has been disturbed as a result of grazing and trampling, invasive species and development (DoE, 2015). It is possible that the 2019/20 bushfires has further exacerbated the impacts of these known threats.
Fire Ecology	The Bogs and Fens TEC is recognised as a national priority for urgent management intervention given an estimated 10-30% percent of its distribution occurs within fire affected areas (DAWE 2020). Prior to the 2019/20 fires, over 1.4 million hectares of alpine and subalpine country were severely burnt in north-east Victoria, south-east NSW and the ACT by the wildfires of January 2003 and then some areas affected by a further major fire in 2006-2007. Whilst regeneration rates of most vegetation types have generally been good following the 2003 fires, the Bogs and Fens TEC suffered extensive damage (TSSC 2009a). In most severely burnt bogs, Sphagnum cover was completely destroyed with the underlying peat burnt down to mineral soils.

MNES	Alpine Sphagnum Bogs and Associated Fens
	Too frequent wildfire poses a direct threat to the Bogs and Fens TEC as extended periods of time between fire events are required for recovery (TSSC 2009a). Sphagnum and its underlying peats are known to be very fire sensitive with recovery slow and almost always dependent on remnant unburnt fragments to support regeneration (Walsh and McDougall, 2004 cited in TSSC 2009a). Delays in regeneration leave the bog environment extremely vulnerable to soil erosion and weed invasion (TSSC 2009a). The impact of fire on the Bogs and Fens TEC is significant and long term. However, evidence from previous smaller fires suggests regeneration will occur given sufficient post-fire recovery periods (McDougall, 2007 cited in TSSC 2009a).
Impact of fires to MNES habitat in Subject land and locality	It is unknown how many hectares of the EPBC-listed Bogs and Fens TEC was impacted by the 2019/20 fires. Approximately 2.5 ha of the Bogs and Fens TEC associated with PCT 939 occurs within the Snowy Mountains IBRA subregion of the project footprint. FESM data indicates that approximately 1.77 ha (71%) of the TEC was severely burnt. This represents less than 0.01% of the area of occupancy for this TEC on the mainland (NSW, Victoria and ACT) (TSSC 2009a).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Approximately two-thirds of the Bogs and Fens TEC occurring within the project footprint was severely burnt as a result of the 2019/20 fires. Although this constitutes a relatively small area (1.77 ha), impacts as a result of the bushfire may still be considered significant given that the TEC only occurs as small, highly fragmented pockets of isolated remnant vegetation. Unburnt areas are considered of high important for the recovery of the TEC given its fire ecology. Furthermore unburnt areas are likely to be significant for the persistent of associated flora and fauna species within the project footprint given the long recovery periods typically associated with this community post-fire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2. Threatened flora

Table A22-4 presents a summary of severely burnt vegetation associated with the EPBC Act listed Threatened Ecological Communities (TEC) threatened flora species occurring within the project footprint. A bushfire impact assessment has been undertaken for each species and is presented within Section 2.1 to Section 2.7 below.

Table A22- 4: Severely burnt habitat for EPBC Act listed flora

Scientific Name	Common name	EPBC Act Status*	Associated PCTs severely burnt	Extent habitat severely burnt (ha)			% severely burnt habitat within project footprint
				BON	INL	SNO

Leucochrysum albicans var. tricolor	Hoary Sunray	E	268, 679, 953, 1196	87.01	9.71	87.40	9%
Prasophyllum bagoense	Bago Leek Orchid	CE	1196,	-	-	39.29	39%

Scientific Name	Common name	EPBC Act Status*	Associated PCTs severely burnt	Extent habitat severely burnt (ha)			% severely burnt habitat within project footprint
				BON	INL	SNO	
Prasophyllum keltonii	Kelton's Leek Orchid	CE	1196	-	-	39.29	42%
Pterostylis oreophila	Blue-tongued Greenhood	CE	939	-	-	1.77	60%
Thesium australe	Austral Toadflax	V	679, 1196	-	-	45.82	4%
Xerochrysum palustre	Swamp Everlasting	V	679, 939	-	-	4.55	35%

2.1 *Ammobium craspedioides*

Table A22- 5: *Ammobium craspedioides* bushfire impact assessment

MNES	*Ammobium craspedioides* (Yass Daisy)
General	*Ammobium craspedioides* (Yass Daisy) is a rosette-forming perennial which is found from near Crookwell on the Southern Tablelands to near Wagga Wagga on the South Western Slopes. Most populations are in the Yass region. Yass Daisy habitat includes moist or dry forest communities, Box-Gum Woodland and secondary grassland derived from clearing of these communities. It is unaffected by light grazing, as populations persist in some grazed sites (DPIE 2020d).
Fire Ecology	A study completed by Doherty and Wright (2006) on the 2003 bushfire in the Australian Alps, found Yass Daisy to be sufficiently re-sprouting and flowering the vicinity of Burrinjuck area. Given that, if the species did occur within the project footprint prior to the 2019-2020 bushfire, it is reasonable to assume that it would have persisted post bushfire.
Impact of fires to MNES habitat in Subject land and locality	Approximately 2,606.03 ha of suitable Yass Daisy habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 52.69 ha of suitable Yass Daisy habitat within three PCT's (268, 287 & 290) in the Inland Slopes IBRA subregion was severely burnt by the 2019/20 fires, or 2%. In total, approximately 98% of all suitable Yass Daisy habitat (associated PCT's) recorded within the project footprint remained unburnt. Yass Daisy was recorded within the project footprint during targeted surveys carried out within Bondo and the Inland Slopes IBRA Subregions (7,660 individuals) and there are 918 records (9,296 individuals) within 20 kms of the project footprint dating back from 1952 to 2022.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint contains Yass Daisy suitable habitat and associated PCT's, including approximately 2,553 . 34 ha that was not severely burnt. Yass Daisy was recorded within unburnt areas in the project footprint during targeted surveys (7,660 individuals) and there are 3 records (12 individuals) within approximately 6 kms of the project footprint. Although fires impacted on approximately 2% of the species suitable habitat in

MNES	*Ammobium craspedioides* (Yass Daisy)
	the project's locality, Yass Daisy is reported to respond well to fire (Doherty and Wright 2006), therefore the remaining habitat within the project footprint is unlikely to be of substantially greater importance to the survival of Yass Daisy following the fires.
Is the population of the species in the area considered an important population post fires?	Although fires impacted on approximately 2% of the species suitable habitat in the project's locality, Yass Daisy is reported to respond well to fire (Doherty and Wright 2006). Therefore, it is likely to have persisted post bushfire and the population of Yass Daisy in the project footprint is not considered to be an important population post 2019-2020 bushfire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2.2 *Leucochrysum albicans var. tricolor*

Table A22- 6: *Leucochrysum albicans var. tricolor* bushfire impact assessment

MNES	*Leucochrysum albicans var. tricolor* (Hoary Sunray)
General	*Leucochrysum albicans var. tricolor* (Hoary Sunray) is currently known from three geographically separate areas in south-eastern Australia. In NSW it currently occurs on the Southern Tablelands adjacent areas in an area roughly bounded by Albury, Bega and Goulburn, with a few scattered localities known from beyond this region (DPE 2022). This species occurs in a wide variety of grassland, woodland and forest habitats, generally on relatively heavy soils and is highly dependent on the presence of bare ground for germination (DPE 2022). Threats to this species includes clearing and habitat destruction, weeds, poor representation in conservation reserves, lack of appropriate biomass reduction, inappropriate fires regimes, grazing by livestock and risk of local extinction because populations are small (DPE 2022). Some threats may potentially have been exacerbated as a result of the 2019/20 bushfires.
Fire Ecology	Grassland communities require some level of disturbance, whether from light grazing or fire, to maintain diversity and prevent a monoculture of grass species (Hobbs and Huenneke 1992). Frequent (7-11 years) fires (Sinclair 2010) are considered ideal for the conservation of *Leucochrysum albicans var. tricolor*, however, how fire intensity impacts the species is unknown. Given the species longevity to requires some disturbance (in the form of frequent fires), if the species did occur within the project footprint, prior to the 2019-2020 bushfire, it is reasonable to assume that it would have persisted post bushfire.
Impact of fires to MNES habitat in Subject land and locality	Approximately 2,148.80 ha of suitable Hoary Sunray habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 184.12 ha of suitable Hoary Sunray habitat within four PCT's (268, 679, 953 & 1196) was severely burnt by the 2019/20 fires, or 9%. The majority of suitable habitat in the project footprint was severely burnt within the Snowy Mountains (87.40 ha) and Bondo (87.01 ha) IBRA subregions, with Inland Slopes also affected (9.71 ha). In total, approximately 91% of all suitable Hoary Sunray habitat (associated PCT's) recorded within the project footprint remained unburnt.

MNES	*Leucochrysum albicans var. tricolor* (Hoary Sunray)
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Hoary Sunray was recorded within unburnt areas in the project footprint during targeted surveys (143,001) and the project footprint contains associated PCTs and suitable habitat in six IBRA subregions, including approximately 1,964.68 ha that was not severely burnt. Approximately 9% of the species suitable habitat within the project footprint was severely burnt by the bushfires. However, this species requires some disturbance (in the form of frequent fires) for its conservation (Sinclair 2010). Therefore, the remaining habitat within the project footprint is unlikely to be of substantially greater importance to the survival of this species following the 2019/20 bushfires.
Is the population of the species in the area considered an important population post fires?	Although the small population of this species is known from only three geographically separate areas (DPE 2022) and fires impacted on approximately 09% of the species suitable habitat in the project footprint, Hoary Sunray is thought to require frequent fires (Sinclair 2010) for its longevity. Therefore, Hoary Sunray is likely to have persisted post bushfire and the population in the project footprint is not considered to be an important population post 2019-2020 bushfire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2.3 *Prasophyllum bagoense*

Table A22- 7: *Prasophyllum bagoense* bushfire impact assessment

MNES	*Prasophyllum bagoense* (Bago Leek Orchid)
General	The geographic distribution of *Prasophyllum bagoense* (Bago Leek Orchid) is very highly restricted. According to the DPE (2014), there is a single population of Bago Leek Orchid in the Tumbarumba area. The number of mature individuals is estimated to be low between 400- 600 individuals (DPE, 2014; DPIE, 2022). In 2020, detailed surveys recorded a population of at least 2,300 individuals (DPE 2021). However, due to fluctuating numbers of aboveground material over seasons it is difficult to determine if the population is stable or declining (TSSC 2014). The species occurs on a sub-alpine treeless plain at an elevation of approximately 1160 m in an alpine bog/heathland community on moist to wet shallow clay loam soil (Jones 2000, 2006), as well as in adjacent eucalypt woodland (DPE 2014).
Fire Ecology	There is no current literature on Bago Leek Orchid's response to bushfire. However, many species in the *Prasophyllum* genera were observed in high abundance post the Black Saturday Victoria 2009 (Duncan 2012), and it has been assumed that the genera respond well to bushfire. Bago Leek Orchid is reliant on seed germination for recruitment of new plants. This species flowers freely without fire stimulation (TSSC 2012 cited in DPE 2014).
Impact of fires to MNES habitat in Subject land and locality	Approximately 101.61 ha of suitable Bago Leek Orchid habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 39.29 ha of suitable Bago Leek Orchid habitat within one PCT (1196) in the Snowy Mountains IBRA Subregion was

MNES	*Prasophyllum bagoense* (Bago Leek Orchid)
	severely burnt by the 2019/20 fires, or 39%. In total, approximately 61% of all suitable Bago Leek Orchid habitat (associated PCT's) recorded within the project footprint remained unburnt. A report on the impact of the 2019/2020 fires on NSW plants of national significance found that the maximum estimated burnt habitat for Bago Leek Orchid is 100% and that its overall risk rating after the 2019/2020 fires was high (Auld et al. 2020). Bago Leek Orchid was listed as a species considered to be at greatest risk of global decline and/or extinction (Auld et al. 2020). Analysis undertaken by the Australian Government Department of the Environment and Energy found that ≥80% of the species modelled likely and known distribution was within 2019/2020 fire affected areas (NSW) (DEE 2020).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The species was recorded during targeted surveys (39 individuals) immediately adjacent (ie within 130m) to the project footprint, which contains associated PCTs and suitable habitat in the Snowy Mountains IBRA subregion, including approximately 62.33 ha that was not severely burnt. Given that the geographic distribution of the species is very highly restricted and that fires impacted on a significant area of Bago Leek Orchid habitat across NSW (Auld et al. 2020 and DEE 2020), the remaining habitat within the project footprint is potentially of substantially greater importance to the survival of this species following the fires until there is substantial recovery of habitat at burnt sites in the region and surrounds.
Is the population of the species in the area considered an important population post fires?	There are 645 Bago Leek Orchid records within 25km of the project footprint (BioNet 2022). Of these records, about 13% were in areas that were severely burnt by the 2019/20 fires, indicating that not all Bago Leek Orchids in the area were impacted by the fires and some are likely to be persisting. There were also 39 individuals identified within the project footprint during targeted flora surveys for the project. Although the genera has been observed to respond well to bushfire (Duncan 2012), given that the geographic distribution of the species is very highly restricted and ≥80% of the species modelled likely and known distribution was within fire affected areas (Auld et al. 2020 and DEE 2020), any surviving population of Bago Leek Orchid in the area is likely to be an important population post fires until there is substantial recovery of populations at burnt sites in the region and surrounds.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2.4 *Prasophyllum keltonii*

Table A22- 8: *Prasophyllum keltonii* bushfire impact assessment

MNES	*Prasophyllum keltonii* (Kelton's Leek Orchid)
General	*Prasophyllum keltonii* (Kelton's Leek Orchid) is known from a single population that occurs in a small area known as McPhersons Plain, about 30 km north-west of Cabramurra and about 17 km south of Talbingo, in the Tumbarumba Local Government Area. The known population, which is

MNES	*Prasophyllum keltonii* (Kelton's Leek Orchid)
	intermingled with the Bago Leek Orchid, is recorded as comprising approximately 400 plants (OEH 2022a). The species has a preference for grassland and is known only from a highly restricted habitat on the treeless McPhersons Plain, an area that includes sub-alpine grassland, sphagnum bogs, and open heathland, at an elevation of 1,100 m (OEH 2022a). This species has an extent of occurrence of approximately 12 ha (0.12 km^2) (TSSC 2014b). The main potential threats to Kelton's leek-orchid include soil disturbance and habitat destruction by four-wheel drive vehicles, trail-bike and horse trail-riding activities, illegal collection and stochastic events such as wildfire (NSW SC, 2008 cited in TSSC 2014b). Some threats may potentially have been exacerbated as a result of the 2019/20 bushfires.
Fire Ecology	There is no current literature on Kelton's Leek Orchid response to bushfire. However, many species in the *Prasophyllum* genera were observed in high abundance post the Black Saturday Victoria 2009 (Duncan 2012), and it has been assumed that the genera responds well to bushfire. Given the literature shows *Prasophyllum spp*. Respond well to fire, if *Prasophyllum innubum* occurred within the project footprint prior to the 2019-2020 bushfire, it is reasonable to assume that it would have persisted post bushfire.
Impact of fires to MNES habitat in Subject land and locality	Approximately 92.78 ha of suitable Kelton's Leek Orchid habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 39.29 ha of suitable Kelton's Leek Orchid habitat within one PCT (1196) in the Snowy Mountains IBRA Subregion was severely burnt by the 2019/20 fires, or 42%. In total, approximately 58% of all suitable Kelton's Leek Orchid habitat (associated PCTs) recorded within the project footprint remained unburnt. A report on the impact of the 2019/2020 fires on NSW plants of national significance found that the maximum estimated burnt habitat for Kelton's Leek Orchid is 100% and that its overall risk rating after the 2019/2020 fires was high (Auld et al. 2020). Kelton's Leek Orchid was listed as a species considered to be at greatest risk of global decline and/or extinction (Auld et al. 2020). Analysis undertaken by the Australian Government Department of the Environment and Energy found that ≥80% of the species modelled likely and known distribution was within 2019/2020 fire affected areas (NSW) (DEE 2020).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project contains associated PCTs and suitable habitat in the Snowy Mountains IBRA subregion, including approximately 53.50 ha that was not severely burnt. Considering adaptations to fire noted, if the species did occur within the project footprint prior to the 2019-2020 bushfire, it is reasonable to assume that it would have persisted post bushfire. There were no populations identified during targeted flora surveys for the project, however 330 individuals were recorded by NSW Forestry Corporation in 2016 in the vicinity of the project footprint at Bago State Forest. Given that the geographic distribution of the species is very highly restricted and that fires impacted a significant area of potential Kelton's Leek Orchid habitat across NSW (Auld et al. 2020 and DEE 2020), the remaining habitat within the project footprint is potentially of substantially

MNES	*Prasophyllum keltonii* (Kelton's Leek Orchid)
	greater importance to the survival of this species following the 2019/20 fires until there is substantial recovery of habitat at burnt sites in the region and surrounds.
Is the population of the species in the area considered an important population post fires?	Although the genera have been observed to respond well to bushfire (Duncan 2012), stochastic events such as wildfire are listed as a main potential threat to the geographically limited Kelton's Leek Orchid (NSW SC, 2008 cited in TSSC 2014b). Given the low number of mature individuals observed, a very restricted distribution (OEH 2022a) and the extensive impact the 2019/2020 fire had on this species (Auld et al. 2020 and DEE 2020), the population of Kelton's Leek Orchid adjacent to the project footprint boundary is likely to be an important population and source of genetic diversity post fire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2.5 *Pterostylis oreophila*

Table A22- 9: *Pterostylis oreophila* bushfire impact assessment

MNES	*Pterostylis oreophila* (Blue-tongued Greenhood)
General	According to TSSC (2014c), this species occurs in the Kiandra and Bago areas of NSW of approximately 90 individuals in total. This species habitat is restricted to areas beside small montane and subalpine streams under tall dense thickets of Leptospermum grandiflorum (Mountain Tea Tree), in black oozing mud or less commonly in peaty soils and sphagnum mounds (Jones, 2006, p. 308 cited in TSSC 2012). This type of habitat occurs throughout much of the upper areas of Kosciuszko National Park. The main identified threats to the species, as listed in TSSC (2012), which are likely to have contributed to its low population include inappropriate land management: inappropriate fire regimes and mismanagement of controlled burns. Several of the threats identified for this species could have a disproportionate impact on the narrow ecological niche favoured by this species (NSWSC 2008 cited in TSSC 2012). For example, a hazard reduction burn in sphagnum mounds in Bago State Forest is reported to have destroyed a subpopulation during unusually dry conditions in 2006 (NSWSC 2008 in TSSC 2012). Some threats may potentially have been exacerbated as a result of the 2019/20 bushfires.
Fire Ecology	There is limited information on Blue-tongued Greenhood response to high intensity fires. The *Pterostylis* genera is variable in its response to fire, some species are fire sensitive while others are neutral (Duncan 2012). Given the limited knowledge of Blue-tongued Greenhood response to fire, and the known negative or neutral response of other species (Duncan 2012), it is not possible to determine whether it would have persisted on the site post bushfire if it was present.

MNES	*Pterostylis oreophila* (Blue-tongued Greenhood)
Impact of fires to MNES habitat in Subject land and locality	Only approximately 2.95 ha of suitable Blue-tongued Greenhood habitat in the form of associated PCT occurs in the project footprint. Of this, FESM data indicates that approximately 1.77 ha of suitable Blue-tongued Greenhood habitat within one PCT (939) in the Snowy Mountains IBRA Subregion was severely burnt by the 2019/20 fires, or 60%. Although these areas may seem small in scale, this species has a restricted distribution and narrow ecological niche (TSSC 2012), therefore the area of suitable habitat in the project footprint is not insignificant for this species. A report on the impact of the 2019/2020 fires on NSW plants of national significance found that the maximum estimated burnt habitat for Blue-tongued Greenhood is 53.35% and that its overall risk rating after the 2019/2020 fires was high (Auld et al. 2020). Blue-tongued Greenhood was listed as a species considered to be at greatest risk of global decline and/or extinction (Auld et al. 2020). Analysis undertaken by the Australian Government Department of the Environment and Energy found that 30 to <50% of the species modelled likely and known distribution was within 2019/2020 fire affected areas (NSW) (DEE 2020).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Although targeted flora surveys did not locate the species (certain areas could not be adequately surveyed due to project access and timing constraints), the project footprint contains associated PCTs and suitable habitat in the Snowy Mountains IBRA subregion, including approximately 1.18 ha that was not severely burnt. Given that the geographic distribution of the species is very highly restricted and that fires impacted an extensive area of Blue-tongued Greenhood habitat across NSW (Auld et al. 2020 and DEE 2020), the remaining habitat within the project footprint is potentially of substantially greater importance to the survival of this species following the fires until there is substantial recovery of habitat at burnt sites in the region and surrounds.
Is the population of the species in the area considered an important population post fires?	Targeted flora surveys undertaken in areas of suitable habitat within the project footprint did not locate the species. There are five nearby records of the Blue-tongued Greenhood, with the closest record 304 m outside the project footprint boundary (DPE 2022). Of these records, none were in areas that were severely burnt, indicating that all records of Blue-tongued Greenhood in the area were not impacted by the 2019/2020 fires and most are likely persisting. Given the very low number of mature individuals, very restricted distribution (OEH 2022), the extensive high risk impact the 2019/2020 fire had on this species (Auld et al. 2020 and DEE 2020) and that some species of Pterostylis genera are fire sensitive (Duncan 2012), any potential population of Blue-tongued Greenhood in the project footprint is likely to be an important population post fires. Furthermore, Blue-tongued Greenhood is likely to be threatened by environmental and demographic stochasticity due to the narrow areas of occupancy, small population sizes, and dispersed distribution of populations (NSWSC 2008 cited in TSSC 2012), indicating it could be vulnerable to stochastic events such as the 2019/20 wildfires.

MNES	*Pterostylis oreophila* (Blue-tongued Greenhood)
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2.6 *Thesium australe*

Table A22- 10: *Thesium australe* bushfire impact assessment

MNES	*Thesium australe* (Austral Toadflax)
General	Austral Toadflax is a small, straggling herb to 40 cm tall and is often hidden amongst grasses and herbs (DPE 2022). Austral Toad-flax is found in very small populations scattered across eastern NSW, along the coast, and from the Northern to Southern Tablelands. It is also found in Tasmania and Queensland and in eastern Asia (DPE 2022). Fire severely impacts the species in late spring when resprouting, particularly after good rain. The threat of fire is exacerbated by an abundance of fuel from exotic tussock grasses. Coastal headland fires from recreational users can get out of control or complete fire suppression can remove the disturbance needed to compete with coastal shrubs (DPE 2022).
Fire Ecology	There is very little literature on the impacts of fire on Austral Toadflax. Cohn (2004) observed that Austral Toadflax occurred in lower densities in recently burned areas when compared to long unburned areas, suggesting that this species may not respond well to fire.
Impact of fires to MNES habitat in Subject land and locality	Approximately 1,043.72 ha of suitable Austral Toadflax habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 45.82 ha of suitable Austral Toadflax habitat within two PCT's (679 & 1196) in the Snowy Mountains IBRA Subregion's was severely burnt by the 2019/20 fires, or 4%. In total, approximately 96% of all suitable Austral Toadflax habitat (associated PCT's) recorded within the project footprint remained unburnt. Analysis undertaken by the Commonwealth Government Department of the Environment and Energy found that 10 to <30% of the species modelled likely and known distribution was within 2019/2020 fire affected areas (NSW) (DEE 2020).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Although targeted flora surveys did not locate the species (certain areas could not be adequately surveyed due to project access and timing constraints), the project footprint contains suitable habitat, including approximately 997.90 ha that was not severely burnt. Given that the geographic distribution of the species is in very small populations scattered across eastern NSW (DPE 2022), and 10 to <30% of the species modelled likely and known distribution was within fire affected areas (NSW) (DEE 2020), the remaining habitat within the project footprint is potentially of substantially greater importance to the survival of Austral Toadflax following the fires.
Is the population of the species in the area considered an important population post fires?	Although targeted flora surveys did not locate the species (certain areas could not be adequately surveyed due to project access and timing constraints), there are several nearby records of Austral Toadflax, with the closest record 7 km from the project footprint (DPE 2022). Given that this species may not respond well to fire (Cohn 2004), and 10 to <30% of the species modelled likely and known distribution was within fire

MNES	*Thesium australe* (Austral Toadflax)
	affected areas (NSW) (DEE 2020), any potential remaining population of Austral Toadflax within the project footprint and the surrounding area is likely to be an important population post fires.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

2.7 *Xerochrysum palustre*

Table A22- 11: *Xerochrysum palustre* bushfire impact assessment

MNES	*Xerochrysum palustre* (Swamp Everlasting)
General	*Xerochrysum palustre* (Swamp Everlasting) is a perennial herb, to 100 cm tall. It is found in Kosciuszko National Park and the eastern escarpment south of Badja and also in eastern Victoria (DPE 2022). Swamp Everlasting grows in swamps and bogs which are often dominated by heaths and sometimes grows in bogs with Sphagnum. It also grows at the edges of bog margins on peaty soils with a cover of shrubs or grasses. It is known to re-sprout after fires (DPE 2022).
Fire Ecology	There is limited literature on Swamp Everlasting response to fire, what is known is that adult plants usually resprout from an underground rootstock following fire (DCCEEW 2022a). This is further exhibited by Walsh and McDougall (2004), which showed the species was relatively unaffected by the 2003 bushfire in Kosciuszko National Park.
Impact of fires to MNES habitat in Subject land and locality	Approximately 12.82 ha of suitable Swamp Everlasting habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 4.55 ha of suitable Swamp Everlasting habitat within two PCT's (679 & 939) in the Snowy Mountains IBRA Subregion was severely burnt by the 2019/20 fires, or 35%. In total, approximately 65% of all suitable Swamp Everlasting habitat (associated PCT's) recorded within the project footprint remained unburnt. Analysis undertaken by the Commonwealth Government Department of the Environment and Energy found that 10 to <30% of the species modelled likely and known distribution was within 2019/2020 fire affected areas (NSW) (DEE 2020).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The species was recorded (6 individuals) within the project footprint during targeted surveys and the project footprint contains associated PCTs and suitable habitat for this species, including approximately 8.27 ha that was not severely burnt. Although 10 to <30% of the species modelled likely and known distribution was within 2019/2020 fire affected areas (DEE 2020), this species has been observed to be relatively unaffected by fire (Walsh and McDougall 2004). Therefore, the remaining habitat within the project footprint is unlikely be of substantially greater importance to the survival of Swamp Everlasting following the fires.

MNES	*Xerochrysum palustre* (Swamp Everlasting)
Is the population of the species in the area considered an important population post fires?	This species was recorded within the project footprint during targeted surveys and although 10 to <30% of the species modelled likely and known distribution was within fire affected areas (NSW) (DEE 2020), this species has been observed to be relatively unaffected by fire (Walsh and McDougall (2004). Therefore, the population of Swamp Everlasting in the area is unlikely to be an important population because of the fires.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3. Threatened fauna

Table A22- 12 presents a summary of severely burnt vegetation associated with the EPBC Act listed Threatened Ecological Communities (TEC) threatened flora species occurring within the project footprint. A bushfire impact assessment has been undertaken for each species and is presented within Section 3.1 to Section 3.13 below.

Table A22- 12: Severely burnt habitat for EPBC Act listed fauna

Scientific Name	Common name	EPBC Act Status*	Associated PCTs severely burnt	Extent habitat severely burnt (ha)			% habitat severely burnt
				BON	INL	SNO	
Anthochaera Phrygia	Regent Honeyeater	CE	268, 280, 287	-	66.27	-	5%
Aprasia parapulchella	Pink-tailed Legless Lizard	V	278,280, 290	-	1.36	-	0.1%
Callocephalon fimbriatum	Gang-gang Cockatoo	E	268, 290, 299, 300, 314, 638, 379, 953, 1196	108.86	241.89	167.94	20%
Grantiella picta	Painted Honeyeater	V	268, 287, 290	-	67.86	-	9%
Hirundapus caudacutus	White-throated Needletail	V; M	268, 277, 280, 285, 290, 297, 299, 300, 306, 314, 638, 639, 679, 939, 953, 1196	108.86	241.89	168.84	29%
Lathamus discolor	Swift Parrot	CE	268, 277, 280, 287, 290, 297, 299, 301, 306, 314, 352	0.01	241.97	0	15%

Scientific Name	Common name	EPBC Act Status*	Associated PCTs severely burnt	Extent habitat severely burnt (ha)			% habitat severely burnt
				BON	INL	SNO	
Petaurus australis	Yellow-bellied Glider		299, 300, 638, 953, 1196	109.87	1.82	162.36	36%
Petauroides volans	Greater Glider	V	299, 300, 638, 953, 1196	62.52	-	62.93	32%
Phascolarctos cinereus	Koala	V	268, 280, 285, 287, 290, 297, 299, 300, 301, 306, 314, 638, 679, 953, 1196	108.83	241.72	168.21	21%
Pseudomys fumeus	Smoky Mouse	E	638, 953, 1196	0.17	-	128.58	33%
Pteropus poliocephalus	Grey-headed Flying-fox	V	287, 290	-	41.40	-	3%

3.1 Regent Honeyeater

Table A22- 13: Regent Honeyeater bushfire impact assessment

MNES	***Anthochaera Phyrgia* Regent Honeyeater**
General	Within NSW, *Anthochaera Phrygia's* (Regent Honeyeater) breeding sub-populations are fragmented and now occur mainly around the Capertee Valley in central-eastern NSW and the Bundarra-Barraba region in northern inland NSW. Minor and sporadic breeding occurs in other areas such as Warrumbungle National Park, Pilliga forests, Mudgee-Wollar region, and the Hunter and Clarence Valleys (DPIE 2019). The Regent Honeyeater inhabits eucalypt open forests and woodlands, predominantly box-ironbark types, but also Spotted Gum and Swamp Mahogany dominated areas on the coast. This species builds a cup-shaped nest of fibres located in forks in live eucalypt or she-oak canopy. A clutch of two or three eggs is laid from late winter to early summer, with multiple breeding attempts per season. The Regent Honeyeater mostly feeds on nectar from flowering eucalypts, especially Boxes and Ironbarks, and from Mistletoe (*Amyema cambagei*). They also feed on the sugary exudates of insects (e.g. lerps) which become an important part of their diet when breeding (DPIE 2019).
Fire Ecology	The Regent Honeyeater is recognised as a national priority bird species because an estimated 10% or more of its Area of Occupancy (AOO) was burnt in the 2019/20 bushfires (DoEE 2020). Prior to the 2019/20 bushfires there were estimated to be 250-400 individuals left in the wild (Crates *et al.* 2019). Key threats as a result of the bushfires include loss of potential breeding habitats to fire, impacts in unburnt refuges on breeding from competitor species such as Noisy Miners, and subsequent loss or minimal flowering of primary feed trees from a combination of drought and fire impacts (LLS 2020). Given the Regent Honeyeater's breeding season, from August to January, the 2019/2020 bushfires could have impacted breeding success both directly and indirectly. The Regent Honeyeater is known to undertake large-scale nomadic movements in the order of hundreds of kilometres, however, the exact nature of these movements is poorly understood. It is likely that movements are dependent on spatial and temporal flowering and other resource patterns (OEH 2020c). Open-forest eucalypts usually flower every year, but flowering season varies within and between species and sites (House

MNES	*Anthochaera Phyrgia* Regent Honeyeater
	1997; Peeters & Butler 2014). Most open forest eucalypt species develop a lignotuber in the early months of growth, and this enables them to survive all but the most severe fires, and to regrow rapidly if their crowns are damaged (Florence 1996; Peeters & Butler 2014). Severe fires may slow the growth of trees, but fires of low to moderate intensity are likely to have little effect on the growth of open forest eucalypt species (Florence 1996). Law *et al.* (2000) found that myrtaceous trees on the mid-north coats of NSW flowered at pre-fire level 1-3 years after both low-intensity burns and wildfires. Resprouting eucalypts have been found to produce flowers as soon as 139 weeks after fire (Kubiak 2009). As such, those areas affected by low to moderate severity fire may already (one-year post-fire) provide the eucalypt foraging resources required by the Regent Honeyeater. Loyn (1997) studied birds just before, and for three years after, a large wildfire in East Gippsland, Victoria. They found that bird abundance declined immediately after the fire, to an average of 60% of pre-fire levels. Honeyeaters were found to disappear after fire, due to a loss in eucalypt and shrub blossom, however their abundance reached 60% of pre-fire levels within three years of the fire. Prolific flowering can also occur after fire, with a study by Smith (1989) finding an increase in honeyeaters after bushfire in southern NSW. As such, an analysis of fire severity is important. High severity fires that reach the canopy can kill mistletoes (Gill 1996) which are an important foraging and nesting resource for Regent Honeyeaters.
Impact of fires to MNES habitat in Subject land and locality	Approximately 1,297.94 ha of suitable Regent Honeyeater foraging habitat in the form of associated PCT's occurs in the project footprint. Of that, FESM data indicates that approximately 66.27 ha (5%) of habitat within three PCT's (PCT 268, 280 and 287) in the Inland Slopes IBRA Subregion was severely burnt by the 2019/20 fires. In total, approximately 95% of all suitable Regent Honeyeater habitat (associated PCTs) recorded within the project footprint remained unburnt. Todd & Maurer (2020) produced a report which focuses on Key Biodiversity Areas (KBAs) affected by the 2019/20 bushfires. According to (Todd & Maurer 2020), 10% of the Regent Honeyeater's AOO was burnt nationally and 54% of unburnt AOO remained in KBA's. The South-west Slopes and Australian Alps KBAs are within 30 km of the project footprint. South-west Slopes KBA covers over 2.5 million hectares, of this, 243.38 ha (<1%) was burnt in the 2019/20 fires. The species Area of Occupancy (AOO) which was burnt has not been determined for this KBA (IUCN 2016; Todd & Maurer 2020). The Australian Alps KBA covers over 1.47 million hectares of this, 468,789.14 ha (32%) was burnt in the 2019/20 fires. The Australian Alps KBA, 100 hectares is mapped as the species AOO, and 0% of the AOO was burnt.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Regent Honeyeater was not detected within the project footprint during targeted surveys, there are 20 records within 20km of the project footprint (estimated 83 individuals) and the closest record is 6 km from the project footprint (DPE 2022). The project footprint contains associated PCTs and potential foraging habitat, including approximately 1,200.73 ha that was not severely burnt. The project footprint does not contain Regent Honeyeater Mapped Important Area (DPIE 2021b), however given this species is highly mobile there is the possibility that they may be more reliant on habitat within the project footprint until there is substantial recovery of foraging resources at burnt sites in the region and surrounds. The Regent Honeyeater has been listed as priority species requiring urgent management action. For all priority species, protecting unburnt areas within or adjacent to recently burnt ground that provide refuges is essential (DAWE 2020). Given the extent and severity of the 2019/20 bushfires across NSW, Regent Honeyeaters may be more reliant on habitat within the project footprint in the short-term. However, the Regent

MNES	*Anthochaera Phyrgia* Regent Honeyeater
	Honeyeaters habitat in proximity to the project footprint was not extensively burnt and it is unlikely the project footprint will have a discernible increase in Regent Honeyeater numbers. Furthermore, the mosaic of vegetation recovery throughout the burned landscape is likely to already provide foraging and nesting resources for this species. With an increase in time since fire at burnt sites, there is likely to be a return of this species to its favoured locations.
Is the population of the species in the area considered an important population post fires?	All remaining populations of Regent Honeyeater are considered to be an important population. There are no known populations of the species in the project footprint, and the project footprint is not within any known key breeding areas or areas mapped as important for the species, however the project will impact on foraging habitat for the species. The Regent Honeyeater is considered a single population throughout its range and is predominantly nomadic, moving through the landscape in response to the availability of foraging resources (Heinsohn et al. 2022). Between 10%-30% of the modelled likely or known distribution of the Regent Honeyeater is within the area burnt by the 2019/20 fires (DAWE 2020). Given the time since the fires and the mosaic of vegetation recovery it is reasonable to assume that the population of Regent Honeyeater in the area is unlikely to be an important population post fires.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.2 Pink-tailed Legless Lizard

Table A22- 14: Pink-tailed Legless Lizard bushfire impact assessment

MNES	*Aprasia paralchella* (Pink-tailed Legless Lizard)
General	*Aprasia parapulchella* (Pink-tailed Legless Lizard) is worm-like and grow to about 25 cm in length. This species typically inhabits sloping, grassy woodlands that are well-drained and contain rocky outcrops. The predominant vegetation is Kangaroo Grass (*Themeda australis*) in the majority of sites (Jones 1992, 1999 cited in IUCN 2022). Commonly found beneath small, partially embedded rocks and appear to spend considerable time in burrows below these rocks that have been constructed by small black ants and termites (DPE 2022). This species' distribution is apparently patchy, but it is difficult to detect (IUCN 2022). The species is a dietary specialist that feed mainly on ant larvae and eggs. It is suspected that Pink-tailed Legless Lizard lays its eggs inside ants nests during breeding season (IUCN 2022). The Pink-tailed Legless Lizard is only known from the Central and Southern Tablelands, and the South Western Slopes. There is a concentration of populations in the Canberra/Queanbeyan Region (DPE 2022).
Fire Ecology	This species faces some threats that may have been exacerbated as a result of the 2019/20 bushfires, including habitat loss and fragmentation, habitat degradation through invasion of habitat by weeds and changed fire regimes that result in changes to vegetation structure and composition (DPE 2022).

MNES	*Aprasia paralchella* (Pink-tailed Legless Lizard)
	A review of several studies on the impacts of the 2019/2020 bushfires has found that reptile species richness may be higher in burnt sites than unburnt, suggesting that burnt areas may be used preferentially for foraging by survivors and/or immigrants (Price et.al 2022).
Impact of fires to MNES habitat in Subject land and locality	Approximately 1,523.97 ha of suitable Pink-tailed Legless Lizard habitat in the form of three associated PCT's (PCT 278, 280 and 290) occurs in the project footprint. Of this, FESM data indicates that approximately 1.36 ha (0.1%) of suitable Pink-tailed Legless Lizard habitat in the Inland Slopes IBRA Subregion was severely burnt by the 2019/20 fires. In total, approximately 99.9% of all suitable Pink-tailed Legless Lizard habitat (associated PCT's) recorded within the project footprint remains unburnt. There is no data available in the current literature on the impact of the 2019/2020 bushfires on this species in NSW. Therefore, the impact of the 2019/2020 bushfires on this species cannot be accurately determined.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Pink-tailed Legless Lizard individuals were identified within the project footprint during targeted surveys and the project footprint contains associated PCTs and suitable habitat, including approximately 1,522.619 ha that was not severely burnt. Given the extent and severity of the 2019/20 bushfires across NSW, there is the possibility that Pink-tailed Legless Lizard may be more reliant on habitat within the project footprint until there is substantial recovery of habitat at burnt sites in the region and surrounds. However, given the time since the fire and that studies have found that reptiles generally respond positively to bushfire as burnt areas are used preferentially for foraging by survivors and/or immigrants (Price et.al 2022).
Is the population of the species in the area considered an important population post fires?	Reptile species richness is known to have a positive response in bushfire affected areas (Price et.al 2022). This species was identified within the project footprint during targeted surveys, and one record was within an area that was severely burnt by the 2019/20 fires, suggesting that the burned landscape is already providing habitat for this species and the species can persist in severely burned areas. Therefore, it is reasonable to assume that the population of Pink-tailed Legless Lizards in the area is unlikely to be an important population post fire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.3 Gang-gang Cockatoo

Table A22- 15: Gang-gang Cockatoo bushfire impact assessment

MNES	*Callocephalon fimbriatum* (Gang-gang Cockatoo)
General	The population size of *Callocephalon fimbriatum* (Gang-gang Cockatoo) is estimated to be between 17,600 and 35,200 mature individuals with a decreasing population trend (IUCN 2022). Gang-gang Cockatoos are distributed from southern Victoria through south- and central-eastern New South Wales. In New South Wales, the Gang-gang Cockatoo is distributed from the south-east coast to the Hunter region, and inland to the Central Tablelands and south-west slopes (DPE 2022). The Gang-gang Cockatoo favours old growth forest and woodland attributes for nesting

MNES	*Callocephalon fimbriatum* (Gang-gang Cockatoo)
	and roosting. Nests are found in hollows that are 7 cm in diameter or larger in eucalypts and 3 metres or more above the ground. In spring and summer, Gang-gangs are generally found in tall mountain forests and woodlands, particularly in heavily timbered and mature wet sclerophyll forests. In autumn and winter, the species often moves to lower altitudes in drier more open eucalypt forests and woodlands, particularly box-gum and box-ironbark assemblages, or in dry forest in coastal areas and often found in urban areas. This species faces many threats that may potentially have been exacerbated as a result of the 2019/20 bushfires, including loss of key breeding and foraging habitat from intensive wildfire events and inappropriate hazard reduction burns (DPE 2022).
Fire Ecology	According to Loyn's (1997) study, large hollow nesting birds appear to recover more slowly from large scale bushfire events, with the Gang-gang Cockatoo in particular remaining uncommon after three years. However, the Gang-gang Cockatoo has been recorded by Niche on several occasions within severely burned PCTs within the project footprint. This would suggest that the species has returned to severely burned PCTs.
Impact of fires to MNES habitat in Subject land and locality	Approximately 2,534.02 ha of suitable Gang-gang Cockatoo habitat in the form of associated PCTs occurs in the project footprint. Of this, FESM data indicates that approximately 518.69 ha (20%) of suitable Gang-gang Cockatoo habitat was severely burnt by the 2019/20 fires. The majority of suitable habitat in the project footprint was severely burnt in the Inland Slopes (241.89 ha or 46%), followed by the Snowy Mountains IBRA Subregion (167.94 ha or 32%), and Bondo (108.86 ha or 21%). In total, approximately 80% of all suitable Gang-gang Cockatoo habitat (associated PCT's) recorded within the project footprint remains unburnt. The Gang-gang Cockatoo is on the provisional list of animals requiring urgent management intervention (DAWE 2020). The priority animals were identified based on the extent to which their range has potentially been burnt, how imperilled they were before the fires, and the physical, behavioural and ecological traits which influence their vulnerability to fire. Most of the animals on this list have had at least 30% of their range burnt (DAWE 2020). Todd & Maurer (2020) produced a report which focuses on Key Biodiversity Areas (KBAs) affected by the 2019/20 bushfires. According to (Todd & Maurer 2020), 26% of the Gang-gang Cockatoo's AOO was burnt nationally and 18% of unburnt AOO remained in KBA's. The South-west Slopes and Australian Alps KBAs are within 30 km of the project footprint. South-west Slopes KBA covers over 2.5 million hectares. Of this, 243.38 ha (<1%) was burnt in the 2019/20 fires. The Australian Alps KBA covers over 1.47 million hectares of this, 468,789.14 ha (32%) was burnt in the 2019/20 fires.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint contains associated PCTs and suitable habitat, including approximately 2,015.33 ha that was not severely burnt. A reduction in suitable Gang-gang Cockatoo habitat surrounding the project footprint due to 2019/2020 bushfires may cause some surviving individuals to rely more on habitat in the project footprint, at least until there is extensive recovery of the canopy for foraging and breeding at burnt sites in the region and surrounds. However, given the large extent of unburnt habitat in proximity to the project footprint (99.1%), there is unlikely to be a discernible increase in Gang-gang Cockatoo numbers. Similarly, 80% of habitats within the project footprint remain unburnt.

MNES	*Callocephalon fimbriatum* (Gang-gang Cockatoo)
	This species was recorded within severely burned PCTs within the project footprint, suggesting that the mosaic of vegetation recovery throughout the burned landscape is already providing some resources for this highly mobile species, thereby decreasing the importance of the areas of habitat that were not burnt. With an increase in time since fire at burnt sites, there is likely to be a return of this species to its entire AOO.
Is the population of the species in the area considered an important population post fires?	This species' is considered to have a poor response to bushfire (Loyn 1997), and around 26% of its AOO was burnt nationally (Todd & Maurer 2020). However, numerous Gang-gang Cockatoo's were recorded within severely burned PCTs within the project footprint, suggesting that the burned landscape is already providing resources for this species. Therefore, it is reasonable to assume that the population of Gang-gang Cockatoo in the area is unlikely to be an important population post fire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.4 Painted Honeyeater

Table A22- 16: Painted Honeyeater bushfire impact assessment

MNES	*Grantiella picta* (Painted Honeyeater)
General	*Grantiella picta* typically inhabits mistletoes in eucalypt forests/woodlands, riparian woodlands of Black Box *(Eucalyptus largiflorens)* and River Red Gum *(E. camaldulensis)*, box-ironbark-yellow gum woodlands, acacia-dominated woodlands, paperbarks, casuarinas, callitris, and trees on farmland or gardens. The species prefers woodlands which contain a higher number of mature trees, as these host more mistletoes (TSSC 2015). It is a specialist feeder on the fruits of mistletoes growing on woodland eucalypts and acacias, primarily mistletoes of the genus *Amyema* (TSSC 2015). The Painted Honeyeater is nomadic and occurs at low densities throughout its range, generally moving north-west into semi-arid regions of the interior in winter and returning southward in spring or summer. The greatest concentrations of the birds and almost all breeding occurs on the inland slopes of the Great Dividing Range in NSW, Victoria, and southern Queensland. Small, delicate nests are built hanging within the outer canopy of drooping eucalypts, she-oaks, paperbarks or mistletoe branches (Commonwealth of Australia 2021a). The main suspected threats to the Painted Honeyeater are destruction of habitat due to agriculture and grazing or insect-induced eucalypt dieback, reduced regeneration in suitable habitat due to grazing by livestock and rabbits, and competition with *Dicaeum hirundinaceum* (Mistletoe Bird) and larger, more aggressive honeyeaters (Qld Government).
Fire Ecology	Painted Honeyeaters can be affected by intense bushfires, which burn the tree canopy, destroying nests, and resulting in mistletoe mortality (Commonwealth of Australia 2021a). Most eucalypts, which the species will use as habitat, have developed strategies for regeneration after fire, especially from epicormic shoots that re-sprout from beneath the bark. A few years post bushfire, most

MNES	*Grantiella picta* (Painted Honeyeater)
	eucalypts have re-gained their canopy foliage. The mistletoes that infested them, however, which Painted Honeyeaters rely heavily on for food, have no such fire resistance, and are generally killed off by bushfires (Fagg 2012).
Impact of fires to MNES habitat in Subject land and locality	Approximately 755.64 ha of suitable Painted Honeyeater habitat in the form of associated PCT's (268, 287 & 290) occurs in the project footprint. Of this, FESM data indicates that approximately 67.86 ha (9%) of habitat was severely burnt by the 2019/20 fires, all within the Inland Slopes IBRA subregion. In total, approximately 91% of all suitable Painted Honeyeater habitat (associated PCT's) recorded within the project footprint remains unburnt.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint contains associated PCTs and suitable habitat for foraging and nesting, including approximately 687.78 ha that was not severely burnt. There were no recorded sightings of the Painted Honeyeater within the project footprint during targeted fauna surveys or incidentally during any other surveys. There are 22 records within the broader Inland Slopes IBRA subregion, three of which occur within 20km of the project footprint, and one which occurs within 5km. Painted Honeyeaters have been found to be more abundant in locations where there are a large number of trees present and a high percentage of canopy cover (Commonwealth of Australia 2021). Although many of the trees the Painted Honeyeater uses for habitat are known to readily regenerate post bushfire (eg. Eucalypts), populations of mistletoe, which they rely on for food, are often decimated by intense bushfires (Fagg 2012). If a mistletoe population is killed by fire, a source of seed outside the burned area is needed to replenish it, often via *Dicaeum hirundinaceum* (Mistletoe bird) (Gill 1996). The rate and timing of reinvasion of Mistletoe post fire is unknown, as it can be highly variable dependent on the area affected by fire and distance from surviving Mistletoe populations. A study conducted by Van & Yan (2006) found that when looking at two mistletoe species, *Amyema preissii* and *Lysiana exocarpi,* they both had a proportion of individuals on host species flower and set fruit within 3 years. This would indicate that Mistletoe recolonisation within unburnt lands within the project footprint could be expected within the given post-fire timeframes. The proportion of bushfire impacts across the range of the Painted Honeyeater is unknown. However, given the species' broad range and mobility and the ongoing availability of suitable habitats throughout its range, it could be reasonably concluded that unburnt habitats within the project are of no greater importance following the 2019/20 bushfires.
Is the population of the species in the area considered an important population post fires?	Painted Honeyeater was not recorded within the project footprint during field surveys. Historic records within 20km of the footprint indicate presence of the species within the locality. Considering the dispersive habit of the Painted Honeyeater, the species is considered to have a single population (Commonwealth of Australia 2021a). The proportion of bushfire impacts across the range of the Painted Honeyeater is unknown. However, given the species' broad range and mobility and the ongoing availability of suitable habitats throughout its range, it could be reasonably concluded that the species population is of no greater importance following the 2019/20 bushfires.

MNES	*Grantiella picta* (Painted Honeyeater)
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.5 White-throated Needletail

Table A22- 17: White-throated Needletail bushfire impact assessment

MNES	*Hirundapus caudacutus* (White-throated Needletail)
General	*Hirundapus caudacutus* (White-throated Needletail) is a migratory bird that is usually seen in eastern Australia from October to April. This species breeds in forests in south-eastern Siberia, Mongolia, the Korean Peninsula and northern Japan June-August. Most often seen in eastern Australia before storms, low pressure troughs and approaching cold fronts and occasionally bushfire. These conditions are often used by insects to swarm (eg termites and ants) or tend to lift insects away from the surface which favours sighting of White-throated Needletails as they feed (DPE 2022). The global population size of White-throated Needletail has not been quantified but is suspected to be stable in the absence of evidence for any declines or substantial threats (IUCN 2022). This species faces some threats that may have been exacerbated as a result of the 2019/20 bushfires, including Loss of forest and woodland habitats (vegetation clearing) which may have also resulted in the reduction of invertebrate prey (DPE 2022). The loss of roosting sites in Australia may also be contributing to the decline of the species (Tarburton 2014 cited in TSSC 2019). It is thought that logging of taiga forests in Siberia, where most of the population breeds, poses the greatest risk by removing hollows which this species uses to breed (Newell et al. 2000; Crowley 2005; Smirnov et al. 2013 cited in TSSC 2019).
Fire Ecology	There is insufficient data available on this species response to fire, however, woodland bird species richness and abundance response in response to wildfire was found to be overwhelmingly negative (Gibson et al. 2021). A key consideration of post-fire fauna response is proximity to unburnt areas, which can facilitate quicker post-fire recovery of forest birds (Murphy et al. 2021 cited in Gibson et al. 2021).
Impact of fires to MNES habitat in Subject land and locality	Approximately 1,770.59 ha of suitable White-throated Needletail habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 519.58 ha (29%) of suitable White-throated Needletail habitat was severely burnt by the 2019/20 fires. The majority of suitable habitat in the project footprint was severely burnt in the Inland Slopes (241.89 ha or 47%) followed by Snowy Mountains (168.84 ha or 32%) and Bondo (108.86 ha or 21%). In total, approximately 71% of all suitable White-throated Needletail habitat (associated PCTs) recorded within the project footprint remains unburnt. Analysis undertaken by the Australian Government Department of the Environment and Energy found that 10 to <30% of the species modelled likely and known distribution in ACT, NSW, Qld, SA, Tas, Vic was within 2019/2020 fire affected areas (NSW) (DEE 2020).

MNES	*Hirundapus caudacutus* (White-throated Needletail)
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	White-throated Needletail have been recorded from the locality and are considered likely to fly over or forage within the project footprint, including approximately 1,251.01 ha that was not severely burnt. Given the impact of the 2019/20 bushfires on the species modelled likely and known distribution (DEE 2020), it is likely that this migratory species may be more reliant on foraging and roosting habitat within the project footprint, until there is substantial recovery of foraging resources in the region and surrounds. However, considering the extent of unburnt habitat in proximity to the project footprint, there is unlikely to be a discernible increase in White-throated Needletail numbers. There are 74 records (569 estimated individuals) of White-throated Needletail within 20 km of project footprint (DPE 2022a). Only four of the pre-2019/20 bushfire records were in areas which were severely burnt, indicating that areas utilised by White-throated Needletail within proximity to the project footprint were not severely burnt, therefore decreasing the potential need for this species to utilise habitat in the project footprint. Therefore, it is reasonable to assume that the habitat of White-throated Needletail in the area is unlikely to be considered more important post fires.
Is the population of the species in the area considered an important population post fires?	White-throated Needletail was not recorded in the project footprint, however they are considered likely to fly over or forage within the project footprint as there are records within 20km of the site, with the closest record only 0.8 km from the project footprint. The response of White-throated Needletail to wildfire is not well documented, however, given the impact of the 2019/20 bushfires on the species modelled likely and known distribution (DEE 2020). Given the time since the fires and the mosaic of vegetation recovery it is reasonable to assume that the population of White-throated Needletail aren't likely to be considered more important post fires.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.6 Swift Parrot

Table A22- 18: Swift Parrot bushfire impact assessment

MNES	*Lathamus discolor* (Swift Parrot)
General	There is estimated to be less than 300 *Lathamus discolor* (Swift Parrot) left in the wild (Olah *et al.* 2020). This species breeds during the Australian summer and only in Tasmania (Webb *et al.* 2019), therefore the subregions affected by the 2019/20 bushfires contain non-breeding habitat for this species only. This species has a broad winter migration range, therefore anywhere with prolific eucalypt flowering during this period has the potential to provide important habitat for this species. On mainland Australia, Swift Parrots are found in dry sclerophyll forests including Spotted Gum, Swamp Mahogany, Ironbark, Grey Gum and Blackbutt dominated vegetation. The TECs that provide habitat for the Swift Parrot include Swamp sclerophyll forest on floodplains, dominated by Swamp Mahogany and Lower Hunter Spotted Gum – Ironbark forest, dominated by the distinctive Spotted Gum, and Ironbarks, and Box-Gum Grassy Woodland, dominated by Yellow Box. Swift Parrots roost communally, often in the same tree each night and only come to the ground to drink from puddles (LLS 2019). A study in Box-Ironbark forests and woodlands of Victoria found the Swift Parrot relied heavily on drainage lines and foraged on 12 eucalypt and one Acacia species (Kennedy & Tzaros 2005).

MNES	*Lathamus discolor* (Swift Parrot)
Fire Ecology	Too frequent fire events affecting flowering in foraging habitat is listed as a key threat to the Swift Parrot which is likely to have contributed to its decline in NSW (DPE 2022; Saunders et al. 2010). Wildfire impacts Swift Parrot habitat by altering tree flowering phenology (Woinarski & Recher 1997) and tree cavity availability (Inions et al., 1989; Gibbons et al., 2000). At one known nesting location for Swift Parrots, greater than 60 per cent of nest trees collapsed within one year after a wildfire (TSSC 2016).
Impact of fires to MNES habitat in Subject land and locality	Approximately 1,608.76 ha of suitable Swift Parrot foraging habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 241.97 ha (15%) of suitable Swift Parrot habitat in the Inland Slopes IBRA Subregion and 0.01 ha in the Bondo IBRA Subregion was severely burnt by the 2019/20 fires. In total, approximately 85 % of all suitable Swift Parrot foraging habitat (associated PCTs) recorded within the project footprint remains unburnt. Given that this species would not have been in NSW during the 2019/20 bushfires and would not have impacted breeding success directly, the main threat as a result of the fires is loss of foraging resources. With an increase in time since fire at burnt sites, there is likely to be a return of this species throughout the landscape.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The Swift Parrot was not recorded in the project footprint during targeted surveys. There are 69 records in the project locality (675 estimated individuals) focused on western extent of the project footprint. All records are outside the project footprint, with the closest record 1 km from the boundary of the project footprint. No pre 2019/2020 fire records of this species occur within severely burnt areas. Where required nectar resources were impacted as a result of the fires, it is possible that Swift Parrot may be more reliant on unburnt habitats within the project footprint for foraging. However, given it is almost three years post-fire and field observations within burnt habitats indicate substantial recovery, it is likely that vegetation has recovered sufficiently to support flowing and associated foraging opportunities for Swift Parrot. The project footprint does not contain Swift Parrot Mapped Important Area (DPIE 2021b) and is not considered to support breeding. Given the above, remaining unburnt habitat within the project footprint is not considered of greater importance to the survival of the species.
Is the population of the species in the area considered an important population post fires?	The project footprint is not within any known key breeding areas or areas mapped as important for the species. Swift Parrot populations, where they occur within the locality, would be considered an important population given the species' critically endangered conservation status regardless of any interactions with the 2019/20 fires. Given the time since the fires and the mosaic of vegetation recovery observed within the locality it is reasonable to conclude there has been no change to the status of populations within the project footprint, where they occur.

MNES	*Lathamus discolor* (Swift Parrot)
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.7 Yellow-spotted Tree-Frog

Table A22- 19: Yellow-spotted Tree-frog bushfire impact assessment

MNES	*Litoria castanea* (Yellow-spotted Tree-Frog)
General	*Litoria castanea* (Yellow-spotted Tree Frog) are large, long-lived and mostly aquatic tree frogs, with only small finger and toe pads (DPE 2022). Following the chytrid virus pandemic in the 1970s, this species went unrecorded for 30 years and was believed to be extinct, until it was rediscovered in 2009 on the Southern Tablelands, near Yass. This population remains the only known extant site of the species (DPE 2022). Yellow-spotted Tree Frog require large permanent ponds or slow flowing 'chain-of-ponds' streams with abundant emergent vegetation such as bulrushes and aquatic vegetation and shelter during autumn and winter under fallen timber, rocks, other debris or thick vegetation (DPE 2022). This species faces many threats including disease from the chytrid fungus and changes to natural water flows and water quality. (DPE 2022). These threats may potentially have been exacerbated because of the 2019/20 bushfires.
Fire Ecology	The impacts of fire on frogs have not been well studied. The few studies that have been undertaken suggest that frogs are generally not significantly impacted by fire, they remain present in burned areas though their abundance levels are lower during the first few years following a fire (Gillespie & West 2012). Impacts resulting from occurrence of wildfires on amphibians may include; Direct mortality of individuals caused by the immediate impacts of the fire, loss of food source, immediate impact of debris flow following fire on survival of individuals, loss of critical habitat features, increased predation pressure, small population size effects (inbreeding depression, vulnerability to localized disturbances), disease, change in importance of other populations (Geary et al. 2021).
Impact of fires to MNES habitat in Subject land and locality	Approximately 35.98 ha of suitable Yellow-spotted Tree Frog habitat in the form of associated PCT's occurs within the project footprint in open dry sclerophyll forest with permanent streams, fringing vegetation, and rocky pooling habitats. Of this, FESM data indicates that approximately 1.77 ha (5%) of suitable Yellow-spotted Tree Frog habitat in the Snowy Mountains IBRA Subregion was severely burnt by the 2019/20 fires. In total, approximately 95% of all suitable Yellow-spotted Tree Frog habitat (associated PCTs) recorded within the project footprint remained unburnt.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	This species was not recorded in the project footprint during targeted surveys, however the project footprint contains associated PCTs and approximately 34.21 ha that was not severely burnt. There is only one known extant site of the species near Yass located outside the project footprint and around 30% of the species habitat within the locality was within the severely burnt areas. Considering there are no records within

MNES	*Litoria castanea* (Yellow-spotted Tree-Frog)
	the project footprint and there is only a small area of suitable habitat located within the project footprint it can assumed that the remaining habitat isn't considered of greater importance.
Is the population of the species in the area considered an important population post fires?	This species was not recorded in the project footprint during targeted surveys, however there are two records (400 estimated individuals) adjacent to the project footprint, with the closest record 9 km outside the project boundary (DPE 2022a). None of these records (pre-2019/20 bushfire) were in severely burnt areas, indicating that known Yellow-spotted Tree Frog habitat within 20 km of the project footprint was not severely burnt by the 2019/20 bushfires, therefore decreasing the potential need for Yellow-spotted Tree Frog to move into the project footprint. This is further evidenced by Yellow-spotted Tree Frog survey data collected since the 2019/20 bushfires, which suggests that there has not been an increase in the population within the project footprint. Furthermore, frogs are generally not significantly impacted by fire and though their abundance levels are lower during the first few years following a fire, they remain present in burned areas (Gillespie & West 2012). Therefore, it is reasonable to assume that the 2019-2020 bushfire would not have significantly impacted this species conservation and the population of Yellow-spotted Tree Frog in the area is unlikely to be an important population post fires.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.8 Broad-toothed Rat

Table A22- 20: Broad-toothed Rat bushfire impact assessment

MNES	*Mastacomys fuscus* (Broad-toothed Rat)
General	The Broad-toothed Rat is a terrestrial and mostly nocturnal rodent. It is herbivorous, with grasses and sedge stems forming the major component of its diet, supplemented by seeds and moss spore cases. In NSW, the Broad-toothed Rat occurs in two widely separated areas: the wet alpine and subalpine heaths and woodlands of Kosciuszko National Park, Bimberi and Scabby Nature Reserves, and Buccleuch State Forest in the south of the State, and on the Barrington Tops, north-west of Newcastle (TSSC 2016b). The species occupies a range of habitats across its range, but typically is highly selective in any region. Preferred habitats include alpine and subalpine heathlands, grasslands adjacent to boulder outcrops, swamps, sedgelands, coastal grassy or shrubby dunes, and sometimes forests with grassy understores. Habitats suitability is largely determined by the availability of cover and grasses (TSSC 2016b). The species lives in a complex of runways through the dense vegetation of its wet grass, sedge, or heath environment, and under the snow in winter. This relatively warm under-snow space enables it to be active throughout winter. Sheltering nests of grass are built in the understorey or under logs, where two or three young are born in summer. In winter, the rats huddle together in nests, for warmth (TSSC 2016b).

MNES	*Mastacomys fuscus* (Broad-toothed Rat)
	Major threats to the Broad-toothed Rat are predation by foxes, too frequent burning, predation by feral cats, habitat loss and fragmentation and global climate change. Habitat change (and resource depletion) due to livestock and feral herbivores and competition with other native rodents are also moderate threats to the species (TSSC 2016b).
Fire Ecology	Research has shown that an increase in fire frequency within alpine bog communities is predicted to increase the number of peaty sedgelands, grasslands and heath, while decreasing the number of *Sphagnum* peatlands (Milner et al. 2016). While an increase in sedgelands, grasslands and heath vegetation is likely to increase available habitat for the Broad-toothed Rat in the long term, high intensity fire is likely to significantly impact populations in the period immediately following fires, through direct mortality, and loss of resources such as food and shelter. Even in unburnt areas, predation by foxes on the Broad-toothed Rat and other small mammals has been shown to increase following fires, with predation concentrated in areas still carrying populations (Milner et al. 2016).
Impact of fires to MNES habitat in Subject land and locality	Approximately 10.74 ha of suitable Broad-toothed Rat habitat in the form of an associated PCT (679) occurs in the project footprint. Of this, FESM data indicates that approximately 5.85 ha (54%) of suitable Broad-toothed Rat habitat was severely burnt by the 2019/20 fires, all within the Snowy Mountains IBRA subregion. In total, approximately 46% of all suitable Broad-toothed Rat habitat (associated PCTs) recorded within the project footprint remains unburnt. A study done to determine estimates of the impacts of the 2019-20 fires on populations of native animal species found that the most plausible percentage population loss for the Broad Toothed Rat one week after severe fire was 70.3%. The estimated population loss for 10 years post severe was still 61% (Legge et al. 2021).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint contains an associated PCT and suitable habitat, including approximately 4.89 ha that was not severely burnt. There were no recorded sightings of the Broad-tooted Rat within the project footprint during targeted fauna surveys or incidentally during any other surveys. One record from 2004 occurs immediately adjacent to the project footprint within the Bago State Forest. Consultatoin with the NSW Forestry Corporation indicates the presence of suitable Broad-toothed Rat habitats at this locality. Review of BioNet indicates there are 630 records within the broader Snowy Mountains IBRA subregion, 90 of which occur within 20km of the project footprint. Research found that the 2019-20 bushfire event impacted on 36.6% of likely Broad-toothed Rat habitat (NSW Government 2021). Previous studies have shown persistence of the Broad-toothed Rat in unburnt habitat, and good dispersion and recolonisation post high intensity fire (Carey et al. 2003). While large habitat patches are likely to support larger populations, there is no evidence that patch size influences population persistence (Milner et al. 2016). Therefore, it is likely that the remaining habitat within the project footprint is of substantially greater importance to the survival of the species following the fires.

MNES	*Mastacomys fuscus* (Broad-toothed Rat)
Is the population of the species in the area considered an important population post fires?	Despite the increased risk of predation by foxes following bushfires and the loss of individuals due to direct mortality, if the species was present in the project footprint pre 2019/2020 bushfires, it is reasonable to assume that it would have persisted within adjacent unburnt habitats. The largest population of Broad-toothed Rats in NSW is in Kosciuszko National Park, located approximately 70 km south of the alignment. Even though the population in Barrington Tops near Newcastle is considered to have the most significant conservation value (endangered population) (NSW SC 20011), with the loss of available habitat for populations in the Snowy Mountains IBRA subregions as a result of the 2019/2020 bushfires, any remaining populations that may occur within the project footprint are considered important populations post fire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.9 Yellow-bellied Glider

Table A22- 21: Yellow-bellied Glider bushfire impact assessment

MNES	*Petaurus australis* (Yellow-bellied Glider)
General	The Yellow-bellied Glider is a large, active, sociable and vocal glider. Adults weigh 450-700 g and have a body length of about 30 cm and a large bushy tail that is about 45 cm long. It has grey to brown fur above with a cream to yellow belly. Yellow-bellied Glider occur in tall mature Eucalypt forest generally in areas with high rainfall and nutrient rich soils. Forest type preferences vary with latitude and elevation; mixed coastal forests to dry escarpment forests in the north; moist coastal gullies and creek flats to tall montane forests in the south. They are very mobile and occupy large home ranges between 20 to 85 ha to encompass dispersed and seasonally variable food resources (DAWE, 2022d). A population of Yellow-bellied Glider on the Bago Plateau, adjacent to the south-western edge of Kosciuszko National Park, is listed as an Endangered Population (under the BC Act 2016) on the basis that it was considered disjunct, near the limit of the species' geographic range and predicted to decline (Anon 2014). The extent of this population intersects the project footprint within the Snowy Mountains IBRA subregion. This species faces many threats that may have been exacerbated as a result of the 2019/20 bushfires including, loss of habitat and resources such as sap trees and live hollow-bearing trees (DAWE 2022d).
Fire Ecology	Yellow-bellied Gliders are considered to be one of the species most heavily impacted by severe fire (Legge *et al* 2021). Hollow-dependant arboreal mammals have been observed to respond poorly to wildfire, with populations observed to continue declining long after the fire (Lindenmayer *et al* 2022). Yellow-bellied Gliders also have a preference for living hollow-bearing trees, and consumption of hollows as a result of fire is particularly harmful to this species (DAWE 2022d).

MNES	*Petaurus australis* (Yellow-bellied Glider)
	A recent study of the Bago Plateau Yellow-bellied Glider population indicates a 26% reduction in the population was detected six to twelve months post-fire (ie spring / autumn 2020/21) (Bilney, et al 2022). Extinction probability at surveyed sites significantly increased within areas of high bushfire severity. However, no impact on species occupancy was detected within low burn severity areas, indicating pockets of unburnt and low-severity fire-affected forests may serve as refugia from wildfire (Bilney, et al 2022).
Impact of fires to MNES habitat in Subject land and locality	Approximately 751.13 ha of suitable Yellow-bellied Glider habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 274.06 ha (36%) of suitable Yellow-bellied Glider habitat was severely burnt by the 2019/20 fires. The majority of suitable habitat in the project footprint was severely burnt in the Snowy Mountains IBRA Subregion (162.36 ha or 59%), followed by Bondo (109.87 ha or 40%) and Inland Slopes (1.82 ha or 1%). In total, approximately 64% of all suitable Yellow-bellied Glider habitat (associated PCT's) recorded within the project footprint remained unburnt. The 2019/2020 bushfires intersected with 41% of the distribution of Yellow-bellied gliders (Legge *et al* 2021). Previous fires have been previously observed to eliminate Yellow-bellied Gliders from an area for at least 15 years and result in local extinctions. Site-level population declines from the 2019/2020 bushfires are estimated at 82% for severely affected sites using expert elicitation and post-fire on-ground surveys suggests that declines may be up to 83-97% (Legge *et al* 2021). A recent study of the Bago Plateau Yellow-bellied Glider population indicates a 26% reduction in the population was detected six to twelve months post-fire (ie spring / autumn 2020/21) (Bilney, et al 2022). Whilst severely burnt habitats are likely to be providing continued foraging opportunities for Yellow-bellied Glider, there is likely to be reduced availability of suitable hollows within burnt habitats through the consumption of stags and hollow limbs. Yellow-bellied Glider occupancy is known to be strongly correlated with hollow availability (Bilney, et al 2022).There is potential that the species would be more reliant on unburnt habitats for breeding and roosting until additional tree hollows develop.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint has suitable foraging and breeding habitat in the form of tall mature eucalypts forests and hollow-bearing trees. The project footprint contains associated PCTs and suitable habitat, including 477.07 ha that was not severely burnt. There are 540 records within 5km of the project footprint, including 19 known records in the Snowy Mountains IBRA Subregion, 10 in Bondo situated within the project footprint and one record in Inland Slopes in the adjacent landscape assessment area (ie within 500 metres of the project footprint). The project footprint has a substantial amount of unburnt area and important habitat, (ie hollow-bearing trees). It has been previously seen that arboreal mammal population numbers increase in unburnt areas post fires (Banks *et al* 2011). Considering the effects severe bush fires have on Yellow-bellied Gliders and their habitat, any remaining habitat of Yellow-bellied Gliders in the project footprint is likely to be considered more important post fires.

MNES	*Petaurus australis* (Yellow-bellied Glider)
Is the population of the species in the area considered an important population post fires?	29 Yellow-bellied Gliders were recorded in the project footprint or within the buffer during the surveys, post 2019/2020 bushfires. Considering the effects severe bush fires have on Yellow-bellied Gliders numbers and their habitat, any remaining populations of Yellow-bellied Gliders in the project footprint are likely to be considered more important post fires, until there is substantial recovery of suitable habitat and populations in the region and surrounds.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.10 Greater Glider

Table A22- 22: Greater Glider bushfire impact assessment

MNES	*Petauroides volans* (Greater Glider)
General	The Greater Glider is the largest gliding possum with a head and body length of 350-460mm and a long furry tail measuring 450-600mm. The Greater Glider has thick fur that increases its apparent size. The Greater Glider occurs in Eucalypt forests along the ranges and coastal plains of eastern Australia (from Central Victoria to around Cairns, Queensland) (DPE 2022). The species is folivorous with a diet mostly comprising eucalypt leaves supplemented by buds and flowers (Commonwealth of Australia 2021a). During the day, Greater Glider shelters in tree hollows with a preference for large (ie > 10 cm) hollows. Both live and standing dead trees are used for denning. Greater Glider faces many threats that may potentially have been exacerbated as a result of the 2019/20 bushfires, including too frequent or high severity fires impacting the population and hollow bearing trees and small population size susceptible to unmanageable threats including loss of individuals and threats impacting habitat quality and food availability (DPE 2022).
Fire Ecology	Hollow-dependant arboreal mammals have been observed to respond poorly to wildfire, with populations observed to continue declining long after the fire (Lindenmayer et al 2022). A recent study in Monga National Park showed that within a year post fire Greater Glider were found within burnt areas, with the highest population density within low intensity burn areas. This study suggests that the species may take refuge within areas of low intensity burn during bushfire, and will readily return to burnt habitats (May-Stubbles 2022). Greater Glider's response to the 2019/20 bushfires would largely be influenced by the ongoing availability of suitable foraging and denning resources within its home range. Given the species is a folivore and active regeneration and resprouting was observed within severely burnt areas within the project footprint, it is likely these areas continue to support foraging opportunities for the species. Field surveys detected the species on numerous occasions within burnt lands situated within the project footprint. This confirms burnt habitats are being utilised. However, it is possible that the fires have reduced the availability of suitable dens within burnt habitats through the consumption of stags and hollow limbs. Given this there is potential that the species would be more reliant on unburnt habitats for breeding and roosting until additional tree hollows develop.

MNES	*Petauroides volans* (Greater Glider)
Impact of fires to MNES habitat in Subject land and locality	Approximately 390.48 ha of suitable Greater Glider habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 125.46 ha (32%) of suitable Greater Glider habitat was severely burnt by the 2019/20 fires. Severely burnt was situated within the Snowy Mountains IBRA Subregion (62.93 ha) and the Bondo IBRA subregion (62.52 ha). In total, approximately 68% of all suitable Greater Glider habitat (associated PCT's) recorded within the project footprint remained unburnt. Given the Greater Glider's breeding season, from February to May, with births occurring between April and June, the 2019/20 bushfires could have impacted breeding success for that season. Breeding in the years following the fires may have also been impacted due to a potential reduction and increased competition for suitable dens. The Greater Glider is on the provisional list of animals requiring urgent management intervention (DAWE 2020). The priority animals were identified based on the extent to which their range has potentially been burnt, how imperilled they were before the fires, and the physical, behavioural and ecological traits which influence their vulnerability to fire. Most of the animals on this list have had at least 30% of their range burnt (DAWE 2020). Drastically, for the greater glider endangered population in Eurobodalla in the South Coast region of New South Wales, 81% of records were within the fire affected ground and more than 25% of records in areas where the canopy has been fully affected (DPIE 2020a).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	Greater Gliders were identified within the project footprint during spotlighting surveys (Snowy Mountain, Bungonia and Bondo IBRA subregion) and the project footprint contains associated PCTs and suitable habitat (containing hollow bearing trees), including approximately 265.02 ha that was not severely burnt. Given the extent and severity of the 2019/20 bushfires across NSW and that this species has been listed as a priority species requiring urgent management intervention, it is likely that Greater Glider's may be more reliant on habitat (in particular the hollow bearing trees) within the project footprint until there is substantial recovery of breeding resources at burnt sites in the region and surrounds.
Is the population of the species in the area considered an important population post fires?	Greater Gliders persist within the project footprint and surrounding locality. It is unknown the extent of bushfire impacts more broadly across the species range. However, it is unlikely that populations within the project footprint would be of any more importance following the 2019/20 bushfires given the likely persistence of the species elsewhere within its broader range (much of this remaining unaffected by the fires).
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.11 Koala

Table A22- 23: Koala bushfire impact assessment

MNES	*Phascolarctos cinereus* (Koala)
General	*Phascolarctos cinereus* (Koala) are usually solitary, however they are territorial and individual home ranges may overlap (SEWPaC 2012). The home range of a Koala can vary according to many factors, including habitat quality, structure and connectivity. A Koala's home range in poor habitat quality is generally larger than a Koala's home range in high quality habitat (SEWPaC, 2012). A dominant male Koala's home range usually overlaps with several females (Eco Logical, 2013), the extent of which is established during the mating season (Queensland Government, 2020). The Lower Hunter Koala Expert Workshop (Koala Expert Workshop) reports Koala populations in Yengo National Park to have an estimated home range of 80 ha due to low quality habitat (Eco Logical, 2013). In comparison, a home range of 10 ha with high quality habitat is generally suitable to support a few Koalas in the Port Stephens area (Eco Logical, 2013).
Fire Ecology	Following the 2019/2020 bushfires, a study was undertaken by Phillips (et al 2021) to determine the impacts on Koala populations. While noting that the impacts of bushfire on Koalas is poorly understood, Phillips (et al 2021) found that the median reduction in the occupancy rate of Koalas within Phillips' (et al 2021) study area was 71% when standardized against pre-fire occupancy levels. Phillips (et al 2021) also stated that "Koala survival was five times more likely in areas where forest canopies were modelled as Unburnt or Partially burnt, compared to areas where forest canopies were Fully burnt". Koala's home ranges are known to be altered as a result of fire, as demonstrated by observations of one individual Koala which was known to persist within a 2-ha home range after being forced out of its original home range due to fire (Eco Logical 2013). According to this information (i.e., typical home ranges of between 10 ha and 80 ha), the project footprint (containing a total area of 3,763.64 ha of suitable Koala habitat in the form of associated PCT's) has the potential to support a koala population ranging between 98 to 785 individuals. Koalas were not recorded within the project footprint despite targeted surveys. Some areas of potential suitable habitat within the project footprint were inaccessible for surveys, therefore the species has been assumed present. If Koala home ranges are altered this may lead to increased aggression between males during the breeding season (September- February) as they seek to determine their divisions of breeding females (DPIE 2020b). Other impacts include increased foraging pressure which may lead to a decrease in Koala habitat quality and increased interactions of Koala populations which may result in increased transmission of diseases such as chlamydia (DPIE 2020b). Given the Koala's breeding season, from September to February, the 2019/2020 bushfires could have impacted breeding success both directly and indirectly.
Impact of fires to MNES habitat in Subject land and locality	Approximately 2,491.63 ha of suitable Koala habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 518.75 ha (21%) of suitable Koala habitat within 15 PCT's was severely burnt by the 2019/20 fires. The majority of suitable habitat in the project footprint was severely burnt in the Inland Slopes IBRA Subregion (241.72 ha or 47%), followed by Snowy Mountains (168.21 ha or 32%) and Bondo (108.83 ha or 21%). In total, approximately 79% of all suitable Koala habitat (associated PCT's) recorded within the project footprint remains unburnt.

MNES	*Phascolarctos cinereus* (Koala)
	Between 10%-30% of the modelled likely or known distribution of the Koala is within the area burnt by the fires (DAWE 2020). The Koala is recognised as a national priority species because an estimated 10% or more of its AOO was burnt in the 2019/20 bushfires (DoEE 2020) and 12% of the modelled likely or known distribution of the Koala population in Queensland, NSW and the ACT (listed as Vulnerable) is within the fire extent (DEE 2020). Although the impact of the 2019/2020 bushfires on Koalas was far greater in South Australia and Victoria, in NSW an estimated 7,817 Koalas were impacted (WWF 2020). Todd & Maurer (2020) produced a report which focuses on Key Biodiversity Areas (KBAs) affected by the 2019/20 bushfires. KBAs are areas that are critical to maintaining biodiversity in Australia (IUCN 2016; Todd & Maurer 2020). The following KBAs are within 30 km of the project footprint: South-west Slopes and Australian Alps. South-west Slopes KBA covers over 2.5 million hectares. Of this, 243 hectares (<1%) was burnt in the 2019/20 fires. The Australian Alps KBA covers over 1.47 million hectares. Of this, 238,005 hectares (16%) was burnt in the 2019/20 fires. This indicates that the KBA's which are likely to contain high quality Koala habitat within 30 km of the project footprint were not significantly burnt in the 2019/20 bushfires.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint contains suitable Koala habitat (associated PCTs), including approximately 1,972.88 ha of unburnt suitable Koala habitat. The Koala has been listed as priority species requiring urgent management action. The assessment by DAWE (2020) states that for all priority species, protecting unburnt areas within or adjacent to recently burnt ground that provide refuges is essential. However, the 2019/2020 bushfires were concentrated on the far southern end of the project footprint (DPIE 2020f). There are 1,517 records of Koala within 20 km of project footprint (DPE 2022a). These records are predominantly at the northern end of the project footprint, with closest record approximately 6.5 km from the project footprint. Only one of these records (pre-2019/20 bushfire) were in severely burnt areas, indicating that areas predominantly inhabited by Koalas within 20 km of the project footprint were not severely burnt by the 2019/20 bushfires, therefore decreasing the potential need for any surviving Koala's to move into habitat in the project footprint. This is further evidenced by Koala survey data collected since the 2019/20 bushfires, which suggests that there has not been an increase in the population within the project footprint. A reduction in suitable Koala habitat surrounding the project footprint due to 2019/2020 bushfires may lead some surviving individuals to move into the project footprint, at least until there is extensive recovery of the canopy at burnt sites in the region and surrounds. The project footprint may experience a small increase in interactions and/or competition from surrounding Koala populations due to the proximity of smaller fires, however given the extent of unburnt habitat in proximity to the project footprint, there is unlikely to be a discernible increase in Koala numbers. Furthermore, it is unlikely that there would be an increase in interactions and competition within the project footprint from the regions most impacted by fires as Koalas have limited ability to flee during a fire event, are attached to place, and sub-adults have a dispersal distance of only 1-10 km (DAWE 2020). It can be assumed that the remaining Koala habitat found in the project footprint is not considered of more importance post fires.

MNES	*Phascolarctos cinereus* (Koala)
Is the population of the species in the area considered an important population post fires?	All remaining populations of Koala are considered to be an important population. There are no known populations of the species in the project footprint, however, project footprint contains suitable Koala habitat and there are 1,517 records of Koala within 20 km of project footprint and 8 of those that occurred within 5km (DPE 2022a). Therefore, given there was no Koala's found within the project footprint and the time that has passed since the fires it is reasonable to assume that the 2019-2020 bushfire would not have significantly impacted this species population of Koalas in the area and is unlikely to be an important population post fire.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.12 Smoky Mouse

Table A22- 24: Smoky Mouse bushfire impact assessment

MNES	*Pseudomys fumeus* (Smoky Mouse)
General	The Smoky Mouse is pale grey to blue-grey to black above, with a grey to white belly. The species has a head and body length of 85-100 mm and a tail length of 110-145 mm and weighs 45-86 g. In NSW, the Smoky Mouse has been recorded from Kosciuszko National Park, Bondo State Forest, Buccleugh State Forest, Ingbyra State Forest, Nullica State Forestand South-East Forests National Park. The Smoky Mouse appears to prefer heath habitat on ridge tops and slopes in sclerophyll forest, heathland, and open forest from the coast (in Victoria) to sub-alpine regions of up to 1800 metres, but sometimes occur in ferny gullies (TSSC 2020). This species faces many threats that may have been exacerbated as a result of the 2019/20 bushfires including, loss of habitat and foraging resources.
Fire Ecology	The Smoky Mouse can usually be safe underground in a burrow during a fire, but the post fire landscape can be harsh and result in population numbers declining rapidly (Hale *et al*, 2022). Inappropriate fire regimes are likely to simplify the heath understorey in dry forests; depleting floristic diversity and encouraging predators, which may result in the loss of Pseudomys species. However, Smoky Mouse have been noted within burnt areas 1-2 years post fire, suggesting that fire does not preclude them from an environment given time for vegetation regeneration. This is likely due to some habitat remaining after fires including rocks, logs and large trees that can be used for protection against predation (Hale *et al* 2022). Frequent burning and megafires can result in low abundance of hypogeal fungi, an important food resource, and can remove hollow logs, which are often used for protection (DSE 2006).
Impact of fires to MNES habitat in Subject land and locality	Approximately 386.10 ha of suitable Smoky Mouse habitat in the form of associated PCTs occurs in the project footprint. Of this, FESM data indicates that approximately 128.74 ha (33%) of suitable Smoky Mouse habitat within three associated PCTs (PCT 638, 953 and 1196) within the

MNES	*Pseudomys fumeus* (Smoky Mouse)
	Snowy Mountains IBRA Subregion was severely burnt by the 2019/20 fires. In total, approximately 67% of all suitable Smoky Mouse habitat (associated PCT's) recorded within the project footprint remained unburnt.
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint does contain suitable habitat for the Smoky Mouse in the form of alpine sedge and heath environment. The project footprint also contains associated PCTs, including 257.36 ha that was not severely burn. There are 37 records within 20 km of the project footprint, 28 in the Snowy Mountains IBRA Subregion, followed by 9 in Bondo. A reduction in suitable Smoky Mouse habitat surrounding the project footprint due to 2019/2020 bushfires may lead some surviving individuals to move into the project footprint, at least until there is extensive recovery of the canopy at burnt sites in the region and surrounds. The project footprint may experience a small increase in interactions and/or competition from surrounding Smoky Mouse populations due to the proximity of smaller fires, however the lack of Smoky Mouse records within 5 km of the footprint and this species ability to survive in situ after fires there is unlikely to be a discernible increase in Smoky Mouse numbers (Hale *et al* 2022). It can be assumed that the remaining Smoky Mouse habitat found in the project footprint is not considered of more importance post fires.
Is the population of the species in the area considered an important population post fires?	There are no known populations of the species in the project footprint. However, the project footprint contains suitable Smoky Mouse habitat and there are 37 records of Smoky Mouse within 20 km of project footprint (DPE 2022a). Given there are no known populations within the project footprint, and the likelihood of Smoky Mouse recolonisation elsewhere in the post fire landscape, it is unlikely that any individuals within the project footprint would be considered an important population.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.

3.13 Grey-headed Flying-fox

Table A22- 25: Grey-headed Flying-fox bushfire impact assessment

MNES	*Pteropus poliocephalus* (Grey-headed Flying-fox)
General	*Pteropus poliocephalus* (Grey-headed Flying-fox) is a generalist, nomadic species that occurs in subtropical and temperate rainforests, tall sclerophyll forests and woodlands, heaths and swamps as well as urban gardens and cultivated fruit crops. It is the largest Australian bat, with a head and body length of 23 - 29 cm. It can be distinguished from other flying-foxes by the leg fur, which extends to the ankle. This species forms a single, extremely mobile, interbreeding population distributed over a vast area (DAWE 2021, Welbergen et al. 2020 cited in IUCN 2022). Grey-headed Flying-foxes are generally found within 200 km of the eastern coast of Australia, from Rockhampton in Queensland to Adelaide in South

MNES	*Pteropus poliocephalus* (Grey-headed Flying-fox)
	Australia. In times of natural resource shortages, they may be found in unusual locations (DPE 2022). Grey-headed Flying-fox roost camps are generally located within 20 km of a regular food source and fidelity to camps is high; some camps have been used for over a century (DPE 2022). The Grey-Headed Flying Fox was once considered abundant and estimated to number in the many millions in the early 20th century (Ratcliffe 1931 cited in IUCN 2022). However, distribution-wide autumn population counts between 1989 and 2005 of individuals at known camps across the species range, varied between 320,000 and 674,000 (mean of 450,714) (Woinarski et al. 2014 cited in IUCN 2022) and its current population trend is declining (IUCN 2022). This species faces many threats that may have been exacerbated as a result of the 2019/20 bushfires, including loss of roosting and foraging sites and heat stress (DPE 2022).
Fire Ecology	The response of Grey-headed flying fox roosts to wildfire are not well understood. In a recent study on the impacts of the 2019/2020 bushfires on Grey-headed flying fox, Baranowski (et al 2021) concluded that "the responses of both roosts and resources to fire severity need to be included in future work". Given the Grey-headed Flying-fox's breeding season, from March to April, the 2019/2020 bushfires could have impacted breeding success both directly and indirectly.
Impact of fires to MNES habitat in Subject land and locality	Approximately 1,339.92 ha of suitable Grey-headed Flying-fox habitat in the form of associated PCT's occurs in the project footprint. Of this, FESM data indicates that approximately 41.40 ha (3%) of suitable Grey-headed Flying-fox habitat within two associated PCTs (PCT 287 and 290) in the Inland Slopes IBRA Subregion was severely burnt by the 2019/20 fires. In total, approximately 97% of all suitable Grey-headed Flying-fox habitat (associated PCTs) recorded within the project footprint remains unburnt. During the spring and summer of 2019–2020, a sequence of circumstances associated with prolonged drought and extreme heat the species experienced an extended and intense food shortage across a broad area, resulting in a large but unquantified number of Grey-headed Flying-fox deaths, possibly in possibly tens of thousands (Mo et al. 2021), near reproductive failure and the burning of over a third of its habitat (Baranowski et al. 2021 cited in IUCN 2022). Pre-weaning reproduction at that time fell to 6% from a 21-year average of 74% (P. Eby unpublished data cited in IUCN 2022). In addition, in the summer of 2019–2020, 72,000 flying-foxes died from hyperthermia during eight separate extreme heat events throughout eastern and south-eastern Australia, with Grey-headed Flying-fox comprising the majority of the mortality estimate (Mo et al. 2021). The recorded deaths are likely substantial underestimates of the true mortality as many roosts are not inspected following events and where inspected mortality is often underreported (Mo et al. 2021, Welbergen, pers. comm. cited in IUCN 2022). The Grey-headed Flying-fox is on the provisional list of animals requiring urgent management intervention (DAWE 2020). The priority animals were identified based on the extent to which their range has potentially been burnt, how imperilled they were before the fires, and the physical,

MNES	*Pteropus poliocephalus* (Grey-headed Flying-fox)
	behavioural, and ecological traits which influence their vulnerability to fire. Most of the animals on this list have had at least 30% of their range burnt (DAWE 2020). Analysis undertaken by the Australian Government Department of the Environment and Energy found that 10 to <30% of the species modelled likely and known distribution in ACT, NSW, Qld, SA, Vic was within 2019/2020 fire affected areas (NSW) (DEE 2020).
Is the remaining habitat within the Subject land of substantially greater importance to the survival of the MNES following the fires?	The project footprint does not contain any Grey-headed Flying-fox roost camps, however it has been assumed present as the project footprint contains associated PCTs and suitable habitat, including approximately 1,298.52 ha that was not severely burnt. There are 74 records within 20 km of the site, with the closest record 0.5 km from the project footprint. None of these records (pre-2019/20 bushfire) were in areas that were severely burnt by the 2019/20 bushfires. This suggests that areas of known Grey-headed Flying-fox habitat within 20 km of the project footprint were not severely burnt and remain suitable habitat, decreasing the need for any surviving Grey-headed Flying-foxes to move into the project footprint. Given the extent and severity of the 2019/20 bushfires across NSW and the subsequent short-term and long-term significant impacts on the Grey-headed Flying-fox, it is likely that this highly mobile and nomadic species may have been more reliant on foraging habitat within the project footprint immediately following the fires, until there was substantial recovery of foraging resources in the region and surrounds. Many of the foraging habitats the Grey-headed Flying-fox favours are well adapted to fire, and active regeneration has been observed within the project footprint during survey efforts, with the increase in time post-bushfire. Considering this, the area within the project footprint is unlikely to be of significantly greater importance to the survival of the Grey-headed Flying-fox, as active regeneration has meant that areas that were unaffected by the fires are no longer as important.
Is the population of the species in the area considered an important population post fires?	Recent data provided by the BCD indicates the presence of eight camps within 37km of the project footprint. Three of these are within 9km of the project footprint in the Inland Slopes IBRA subregion, which was impacted by the 2019-2020 bushfires. Given the significant impact of the prolonged drought and extreme heat during the spring and summer of 2019–2020 had on this species, local populations of Grey-headed Flying-fox are likely to have been considerably impacted. However, severely burnt lands were observed to support substantial post-fire recovery and would be actively supporting foraging opportunities for these populations. This is likely to have occurred more broadly throughout the range of the species and as such, local populations are not considered to be of any more importance as a result of the 2019/20 bushfires.
Avoidance, mitigation and offset measures	Avoidance, mitigation and offset measures are addressed respectively in Chapters 11, 13 and 14 of the BDAR.
