Content:

We completely object to the inland rail using the existing railway line in our neighbour or building a new line.

Our reasons are as follows.

- property values, have they already been affected? By how much already and how much in the future?
  - Noise, extra noise from a minimum of 10 trains a day doing high speeds. Also flashing lights and bells.
  - safety, what actions will be taken to make these crossings safe so close to town? There have already been 2 fatalities in this area in recent years.
  - my children use the bus stop close to one of the level crossings. Safety issue.
  - lost time at level crossings. I have been told that it will start with 10 trains a day at 1.8km long and the wait time will start with a 2 min wait. Makes popping into town inconvenient. This wait time will get longer as the trains do.
  - if the new line goes in the paddock across from my property it will take away my peaceful rural view.
- We completely object to this inland rail.
