

## 9 Environmental management measures

---

Chapter 29 of the EIS for the project summarised the identified environmental management measures that would be adopted to avoid or reduce potential environmental impacts. These measures were revised in Part E of the SPIR after consideration of the issues raised during the EIS public Exhibition period.

Chapter 7 (Environmental assessment) indicated that potential impacts for the following environmental issues would be effectively managed through the implementation of the approved environmental management measures for the project as summarised in the SPIR:

- Traffic and transport
- Operational air quality
- Noise and vibration
- Groundwater drawdown and settlement
- Socio-economic, land use and property
- Urban design and visual amenity
- Water management
- Resource use and waste.

As such the proposed modification would not require any changes or additions to the environmental management measures.
