

Concrete Blinder Replacement System

Neoferma PUR-X® Blinder is a 1-component, water reactive, solvent and sulphate free, ultra-low viscosity polyurethane injection resin.

PUR-X® Blinder is especially developed to consolidate, strengthen, and harden the top surface of sandy soils. It can be poured or sprayed over the top surface.

The advantages

- Single component, easy application.
- Does not need any special pumping equipment.
- Very low viscosity for easy soil penetration.
- Rapid set time, as soon as 4 hours, allowing quick access for proceeding trades.
- Environmentally friendly product (No VOC's or TDI's).
- High mechanical and chemical resistance of the cured polyurethane.
- Provide a strong base to support both the membrane (if needed) and reinforcing steel.
- No additional excavation required to install concrete blinder.
- No need for concrete pumps or concrete.
- For use with or without a waterproofing membrane, above or below water table.
