

The Lake Lyell pumped Hydro project is beyond devastation.

When we bought this place. We fell in love. The limitless possibilities to harmonise with nature. Respect it. Love it. And we have. Every sunrise, sunset, rainy days, lightning storms, rainbows, eagles twirling in the wind, black cockatoos piecing the air with their shout. The wombats, lizards and platypus in the lake. There is beautiful synchronicity in this serenity. My goal was to have a retreat on our beautiful property overlooking Mt Walker.

We already went through heartbreak as my father left my mother all alone here. But held by the serenity she picked herself up. Paid for the land all on her own. Nearly 60 years' worth of her lifetime. Put into her property. Her healing place. Where we watch the sunrise beside Mt Walker. This place deserves to be respected. Deserves to be loved.

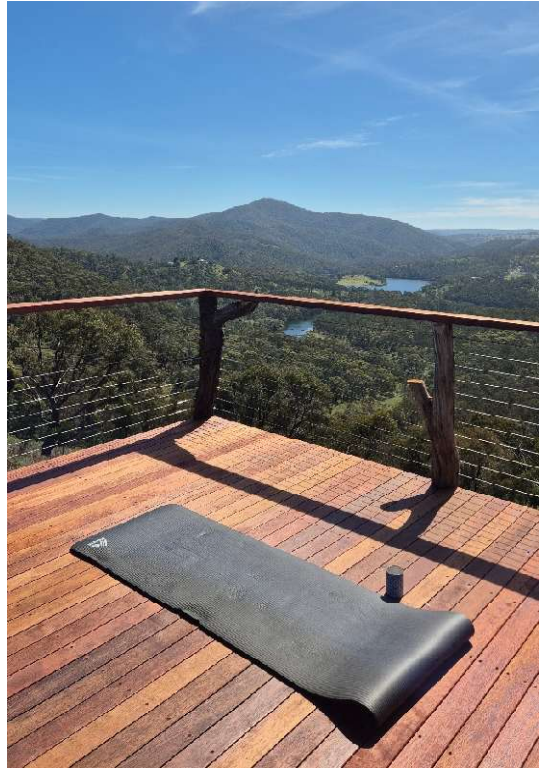

All these photos are taken from our home.

No. I do NOT support this irreversible devastation.

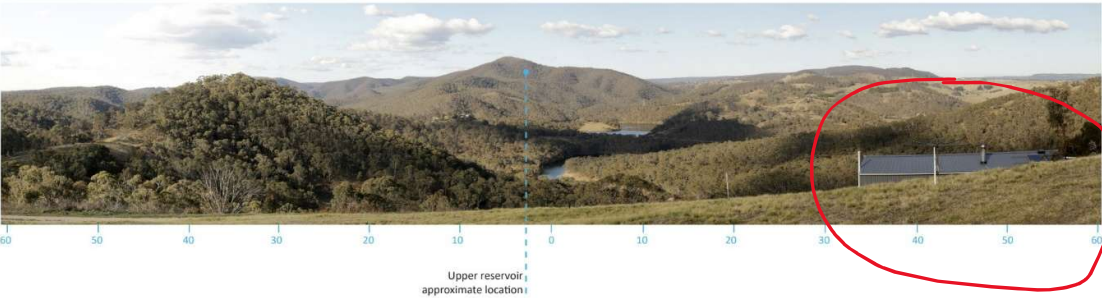

Tiere Wiersma.

A handwritten signature in black ink, which appears to read "Tiere Wiersma". The signature is stylized with a large, looped initial 'T'.

A.6 Viewpoint 6 - Sandalls Drive

Panoramic view of existing site

Visual assessment table	
Viewpoint type	Residence / local road
Distance from closest permanent structure	2,800 m
Duration of view	Long
Scale of change in the landscape	Moderate
Extent of view affected	Moderate
Magnitude of change (table 3.2)	Moderate
Viewer sensitivity level classification (table 3.3)	Moderate
Scenic quality classification (table 3.4)	High
Visual sensitivity rating (table 3.5)	High
Visual impact rating (table 3.6)	High

Visual impact discussion

This location will have views of the upper reservoir, and of buildings and other structures at lower elevations.

This viewpoint's moderate rating for viewer sensitivity reflects this viewpoint's assessment as a primary view from a rural dwelling.

The landscape around this viewpoint is hilly with patches of cleared agricultural land and extensive stands of remnant native trees. The location has views to Lake Tyell and Mt Walker, giving this view a high scenic quality rating.

A photomontage of the project is presented on the following page with an enlargement of the area with greatest impact.

Some mitigation of visual impacts on motorists may be achieved by tree planting on public land along the road.

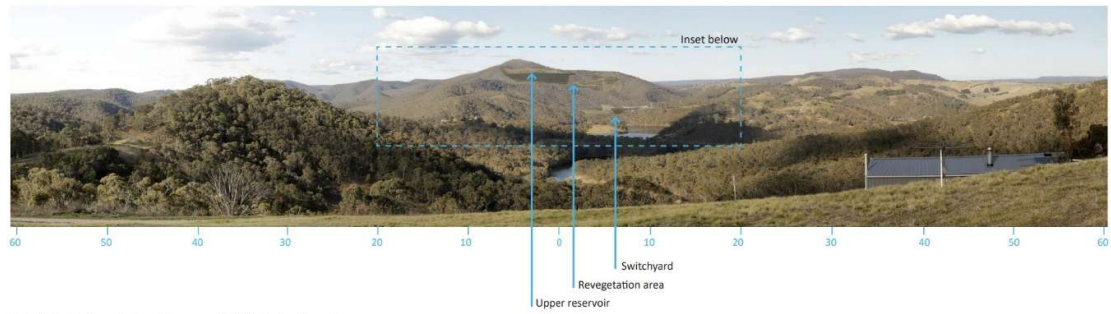

A private residence (SR2001) is located close to this viewpoint (visible in the right hand side of the image above). Mitigation of visual impacts at the receiver, for example with screen planting near the residence, may alleviate some visual impact. However this benefit could be offset by lost views of Mount Walker and nearby ranges.

The mitigation proposed in chapter 9 may minimise visual impacts for this location, although the visual impact rating may not be reduced by mitigation at the project site.
