

We are Graham and Shelley Marchant and we own a farm and live on the Eastern side of Walcha NSW.

We strongly object to the proposed Winterbourne Wind Turbines.

Why would you want to destroy some of the best fertile grazing country in NSW with the wind turbines proposed and there infrastructure.

As farmers it is hard enough now to breed our livestock with the added interference of noise and radiation from these wind turbines.

We also worry about the next generation of farmers and how it will affect their future...

Walcha is known for our Tourism and one of them being the Apsley Falls and our gorge country. These proposed wind turbines will take away the scenic value and will kill some of the birdlife. And also the wind turbines are way too close to the National Parks in our area.

In our opinion surely there would be better options to locate these Wind Turbines. Less destructive to the environment and closer to where they are needed for the electricity...
