

I object to this project.

Further to the objections already submitted by me, I add the following objections:

1. I referred previously to a failure to detail green house gas emission reductions in the EIS. More particularly, the applicable State Infrastructure Strategy is that of 2022-2042. The Strategy **requires** that new infrastructure measure and report in accordance with National Greenhouse Accounts. It requires that public infrastructure must measure and report how infrastructure-related decisions contribute to the State's total emissions and remaining carbon budget. Proponents must *"adopt global best practice and embrace industry-standard approaches to carbon accounting, disclosure and management."* Government agencies are charged with supporting the transition to low carbon infrastructure by **"quantifying, valuing and disclosing the carbon contribution of the infrastructure."**

**There has been no attempt made by the proponent to quantify, value and disclose the carbon contribution of the project infrastructure.** The proponent has not complied with the essential Strategy and the project should not be approved.

Should the proponent assert that the "low emission energy generation" enabled by the project is offset against its own high emission transmission infrastructure, then the proponent must assess also, **the embedded emissions in the infrastructure generation, storage and ancillary structures which the project enables.**

2. The following Management Plans or Strategies have **not** been provided in the EIS:

- Local Workforce Participation Strategy;
- Industry Participation Plan;
- Landowner Engagement Strategy;
- Pre-Construction and Construction Communications and Engagement Plan;
- Construction Environmental Management Plan;
- Construction Noise and Vibration Management Plan;
- Aboriginal Cultural Heritage Management Plan;
- Historical Heritage Management Plan;
- Soil and Water Management Plan;
- Social Impact Management Plan;
- Workforce Management Plan;
- First Nations Liaison Plan;
- Complaints Management System;
- Operational Communications Plan;
- Property Management Plan;
- Community Wellbeing Strategy;
- Bush Fire and Emergency Management and Evacuation Plan;
- Landscape Character and Visual Impact Management Plan;
- Biosecurity Management Plan;
- Vegetation Management Plan;
- Operational Emergency Management Plan;

- Operational Environmental Management Plan;
- Traffic Management Plan;
- Vehicle Movement Plan;
- Driver Fatigue Management Plan;
- Construction Waste Management Plan;
- Biodiversity Management Plan.

The Plans listed above **must** be submitted and they must be submitted in detail to provide the community with an opportunity to respond. The EIS is inadequate without them. To fail to supply detailed plans in relation to all of the above matters is to prevent any possibility of compliance with the requirements of a social licence.

I reserve the right to submit further objections in relation to this project.
