Stakeholder Representative  
Lue Action Group  
Lue, NSW

Dear Phil

Our ref: P17234 LAG concerns.docx

## Concerns with the Bowdens EIS

Water Technology excel in translating science into technically sound and evidence-based management outcomes. We apply our knowledge and understanding of key processes to achieve holistic solutions while managing potential risk for our clients and the environment. We offer an integrated and innovative approach, unique to each project, through the collaboration of our in-house hydrogeologists, engineers and numerical modellers. We work with government, industry and the private sectors across Australia, and globally, to provide groundwater management solutions.

Lue Action Group (LAG) requested Water Technology to inform LAG in relation to 18 of 40 concerns related to groundwater in the Environmental Impact Statement (EIS) prepared for State Significant Development (SSD) 5765. Our scope of work is constrained by both budget and time (while the EIS was on public display). These concerns consider the Secretary's Environmental Assessment Requirements (SEARs) for SSD 5765 which formed the terms of reference for the EIS.

These 18 concerns are provided as individual files to inform LAG, summarising the concern, the relevant SEARs and a discussion around each concern.

Yours sincerely

Craig Flavel  
National Practice Lead - Groundwater
