Letter of Support – Wilpinjong Mine MOD 3 (Pit 8 Extension)

Dear Sir/Madam

Liebherr-Australia Pty Ltd (“Liebherr”) writes to express our strong support for the proposed Modification 3 (MOD 3) to the Wilpinjong Mine development consent (SSD-6764), which will extend operations within Pit 8 and enable continued delivery of significant economic, employment and energy security benefits.

Liebherr has proudly supported the NSW mining sector since establishing our local branch in 1995, providing advanced mining equipment and service capabilities across the state. We have supported the Wilpinjong open cut operation specifically since 2013, supplying and maintaining heavy mining equipment tailored to the site's production demands. Today, our engagement at Wilpinjong represents approximately AUD \$10 million in annual revenue and supports 12 full-time Liebherr employees dedicated to this operation.

The approval of MOD 3 will provide certainty for long-term planning and continuity for our local workforce, and will sustain the investment Liebherr has made in people, infrastructure and service capability in regional NSW.

Liebherr also acknowledges the importance of future-focused, sustainable resource development. As a global technology leader, Liebherr is actively investing in low-carbon and zero-emission technologies for the mining industry, including the development of electric drive systems and hydrogen-powered equipment. The continuation of responsible operations like Wilpinjong supports the commercial deployment of these innovations within Australia's energy and resource sectors.

We understand that Peabody Energy has undertaken environmental and community consultation in support of MOD 3 and trust that these processes will assist a thorough and balanced assessment.
