

I totally object to Bowmans Creek's ugly, obnoxious & detrimental Electricity Generating Works (EGW.)

*Ruining almost 17,000 hectares of wonderful beef cattle grazing land & the pretty visual amenity of this beautiful rural area - which rural residents love & appreciate so much, is completely unacceptable, as this costly, inefficient energy source will not benefit Muswellbrook, Singleton or the Upper Hunter in any way at all.

*There will basically be no ongoing jobs - as is typically proven with all solar/wind energy Electricity Generating Works.

*Beneficial tourism will be negatively impacted through spoiling the natural beauty of the landscape.

*Wildlife will be disturbed & killed & vital habitat destroyed.

*Serious, negative health impacts will affect many rural residents who presently enjoy this peaceful & precious, ecologically sustainable environment.

*Bowmans Creek EGW is ripping off everyday Australian taxpayers through a taxpayer funded subsidy rort.

The revenue loss for Australia from relying on Beijing's Blueprint with Chinese manufactured wind turbines/PV Solar & the poor energy output produced is massive & a real retrograde step for Australia's welfare, curtailing Australian industry & manufacturing.

*There is absolutely no positive benefit whatsoever for NSW/Australia from this environmentally harmful, health impacting, future electronic garbage.

Beneficiaries

*The beneficiaries of Beijing's Blueprint sprung by the United Nations will be Matt Kean's cabal - Energy Policy Director [REDACTED]/brother [REDACTED]/business partner Liberal Moderate powerbroker, lobbyist [REDACTED]/their Premier State solar/wind energy lobbying firm/Clean Energy Strategies/Blueprint Institute - channelling squillions of \$'s from solar/wind energy developers/companies for access to Government through cosy, back room deals & corrupt connections entrenching Matt Kean & Rob Stokes in their positions in order to deliver their diabolical, 100% fudged energy transition planning scam - a roadmap to riches for these rorting beneficiaries at great cost to everyday Australians.

IPCN is clearly no corruption safeguard, as it is very much a useless rubber stamping outfit subject to Rob Stokes - with no independence & no competence or honesty to even abide by the Principles of Ecologically Sustainable Development. They have repeatedly proven to regurgitate the developers' swill which the NSW DPIE disgracefully accept as factual.

*With three previous Epuron proposals all on sold to the CCP's Goldwind - who are linked to Xinjiang's concentration camps & genocide of the Uyghurs, it is a foregone conclusion that Bowman's Creek will do likewise.

This Presents NSW/Australia With a Massive National Security Threat to Critical Energy Infrastructure, which will sabotage Australian welfare, sovereignty & independence.

Given the increasing hostilities of the CCP, all private & state owned Chinese companies need to be removed from all critical infrastructure, with Project Energy Connect proposal also an insane proposition which no democratic Government can possibly accept.

The Federal Government must therefore, condemn & disallow this Bowmans Creek proposal, along with all others owned by Goldwind, Maenong, Cheung Kong Conglomerate/SKI - including AGN/AGIG Gas supply/control/hydrogen trials, Beijing's BCJE, UPC, State Grid Corporation of China, etc.

* Large-scale Wind/Solar is Not Economically Beneficial to NSW/Australia at all because of their poor efficiency, dodgy, proven non-compliant, off-shore ownership, massive waste burden created - including toxic elements & the excluded astronomical costs of battery/hydro storage & interconnectors essential to incorporate these inferior energy sources into the grid - which also so unnecessarily further ruins vast tracts of irreplaceable arable, food producing land & beautiful rural environments in the process.

Wind turbines present NSW/Australians with extremely costly (\$660,000 per turbine per year) inferior (59% efficiency,) unreliable energy - based on fudged energy costings from the likes of inside investors Lazards, the modelling of which has astonishingly never even been seen by NSW Treasury!

There are far superior, much more efficient, reliable & cost effective baseload energy sources in plentiful supply in Australia - including coal, uranium & gas.

These take up far less land space & provide vastly more reliable, beneficial, independent & secure energy sources.

Misrepresentative, Fake Green Lifecycle

Wind/Solar Energy is in no way clean, green, sustainable or part of the circular economy.

These 60 x 220 m wind turbines will do nothing positive to benefit the global environment or alter the temperature at all.

It is essential to include their whole energy intensive, SF6 leaking, toxic polluting, massive waste burden creating lifecycle.

Misrepresentative, positive rhetoric has been used to present a fraudulent, dishonest narrative for the benefit of city-centric wokesters, developers, promoters, lobbyists & investors at huge subsidy expense to everyday Australian taxpayers & electricity consumers - of whom impacted rural residents clearly experience the practical reality of the scam & ugly horror that large-scale wind/solar energy is.
