# RE: SGEGGS Darlinghurst Concept & Stage 1 (SSD 8993)

Dear Prity Cleary,

Thank you for notifying Sydney Water of the development application listed above. We have reviewed the application based on the information supplied and provide the following comments to assist in planning the servicing needs of the proposed development.

# Water Servicing

- This development is under the Centennial Park Water Supply Zone.
- The site is covered by multiple buildings. The existing buildings are serviced by multimeter connections (Figure 1).
- The WSC should re-submit the application with estimated water uses for each new building and a plan showing each new building with proposed water connection point to existing Sydney Water's main.

## Wastewater Servicing

- This development is under the Bondi Sewerage System.
- This site is covered by multiple buildings. The existing buildings are serviced by multiple sewer connections (Figure 3).
- The WSC should re-submit the application with estimated sewer demand for each new building and a plan showing each new building with proposed sewer connection point to existing Sydney water's sewer.

## Stormwater

- Our available records indicate, there is a Sydney Water's 300mm stormwater pipe located through the development site at East West direction between Thomson Street and Bourke Street near the northern end of Thomson Street.
- Sydney Water's <u>guidelines for building over or adjacent to stormwater assets</u> outline the process and design requirements for such activities. As per the guidelines, the applicant is advised of the following:
  - No building or permanent structure is to be constructed over the stormwater channel / pipe or within **1m** from the outside wall of the stormwater asset.
    Permanent structures include (but are not limited to) basement car park, hanging balcony, roof eves, hanging stairs, stormwater pits, stormwater pipes, elevated driveway, basement access or similar structures. This clearance requirement would apply for unlimited depth and height.

• The applicant is required to submit the elevation drawings with the stormwater channel/ pipe, to ensure that the proposed buildings and permanent structures are 1m away from the outside face of the stormwater channel.

Please refer to the relevant guidelines for further detail on requirements and the process for approval.

- Dilapidation Survey Report:
  - If the proposed development work is within 5m from the Sydney Water's 300mm stormwater pipe which is located within the development site, proponent is required to undertake a dilapidation survey report / CCTV report of the Sydney Water's stormwater pipe prior to commencement of any work on the site. This report should extent at least 10m upstream and downstream from the property boundary. A copy of this dilapidation report is to be provided to Sydney Water.
  - This dilapidation survey report/ CCTV Report is to be carried out again upon completion of the all construction work.

This advice is not a formal approval of our servicing requirements. Detailed requirements, including any potential extensions or amplifications, will be provided once the development is referred to Sydney Water for a Section 73 application. More information about the Section 73 application process is available on our web page in the Land Development Manual.

Further advice and requirements for this proposal are in the attachment/s. If you require any further information, please contact the Growth Planning and Development Team on 8849 6073 or email <u>urbangrowth@sydneywater.com.au</u>.

Yours sincerely,

Fernando Ortega A/Manager, Growth Planning & Development

#### Sydney Water Servicing

A Section 73 Compliance Certificate under the Sydney Water Act 1994 must be obtained from Sydney Water.

The proponent is advised to make an early application for the certificate, as there may be water and wastewater pipes to be built that can take some time. This can also impact on other services and buildings, driveways or landscape designs.

Applications must be made through an authorised Water Servicing Coordinator. For help either visit <u>www.sydneywater.com.au</u> > Plumbing, building and developing > Developing > Land development or telephone 13 20 92.

#### **Building Plan Approval**

The approved plans must be submitted to the Sydney Water  $\underline{\text{Tap in}^{\text{TM}}}$  online service to determine whether the development will affect any Sydney Water sewer or water main, stormwater drains and/or easement, and if further requirements need to be met.

The Sydney Water <u>Tap in</u><sup>™</sup> online self-service replaces our Quick Check Agents as of 30 November 2015.

The <u>Tap in  $\mathbb{M}$ </u> service provides 24/7 access to a range of services, including:

- building plan approvals
- connection and disconnection approvals
- diagrams
- trade waste approvals
- pressure information
- water meter installations
- pressure boosting and pump approvals
- changes to an existing service or asset, e.g. relocating or moving an asset.

Sydney Water's <u>Tap in™</u> online service is available at:

https://www.sydneywater.com.au/SW/plumbing-building-developing/building/sydney-water-tapin/index.htm

## Attachment 2

# Requirements for **Business Customers for Commercial and Industrial Property Developments.**

#### **Trade Wastewater Requirements**

If this development is going to generate trade wastewater, the property owner must submit an application requesting permission to discharge trade wastewater to Sydney Water's sewerage system. You must obtain Sydney Water approval for this permit before any business activities can commence. It is illegal to discharge Trade Wastewater into the Sydney Water sewerage system without permission.

The permit application should be emailed to Sydney Water's <u>Business Customer Services</u> at <u>businesscustomers@sydneywater.com.au</u>

A Boundary Trap is required for all developments that discharge trade wastewater where arrestors and special units are installed for trade wastewater pre-treatment.

If the property development is for Industrial operations, the wastewater may discharge into a sewerage area that is subject to wastewater reuse. Find out from Business Customer Services if this is applicable to your development.

#### **Backflow Prevention Requirements**

Backflow is when there is unintentional flow of water in the wrong direction from a potentially polluted source into the drinking water supply.

All properties connected to Sydney Water's supply must install a testable Backflow Prevention Containment Device appropriate to the property's hazard rating. Property with a high or medium hazard rating must have the backflow prevention containment device tested annually. Properties identified as having a low hazard rating must install a non-testable device, as a minimum.

Separate hydrant and sprinkler fire services on non-residential properties, require the installation of a testable double check detector assembly. The device is to be located at the boundary of the property.

Before you install a backflow prevention device:

- 1. Get your hydraulic consultant or plumber to check the available water pressure versus the property's required pressure and flow requirements.
- 2. Conduct a site assessment to confirm the hazard rating of the property and its services. Contact PIAS at NSW Fair Trading on 1300 889 099.

For installation you will need to engage a licensed plumber with backflow accreditation who can be found on the Sydney Water website:

http://www.sydneywater.com.au/Plumbing/BackflowPrevention/

# Water Efficiency Recommendations

Water is our most precious resource and every customer can play a role in its conservation. By working together with Sydney Water, business customers are able to reduce their water consumption. This will help your business save money, improve productivity and protect the environment.

Some water efficiency measures that can be easily implemented in your business are:

- Install water efficiency fixtures to help increase your water efficiency, refer to WELS (Water Efficiency Labelling and Standards (WELS) Scheme, <u>http://www.waterrating.gov.au/</u>
- Consider installing rainwater tanks to capture rainwater runoff, and reusing it, where cost effective. Refer to http://www.sydneywater.com.au/Water4Life/InYourBusiness/RWTCalculator.cfm
- Install water-monitoring devices on your meter to identify water usage patterns and leaks.
- Develop a water efficiency plan for your business.

It is cheaper to install water efficiency appliances while you are developing than retrofitting them later.

## **Contingency Plan Recommendations**

Under Sydney Water's <u>customer contract</u> Sydney Water aims to provide Business Customers with a continuous supply of clean water at a minimum pressure of 15meters head at the main tap. This is equivalent to 146.8kpa or 21.29psi to meet reasonable business usage needs.

Sometimes Sydney Water may need to interrupt, postpone or limit the supply of water services to your property for maintenance or other reasons. These interruptions can be planned or unplanned.

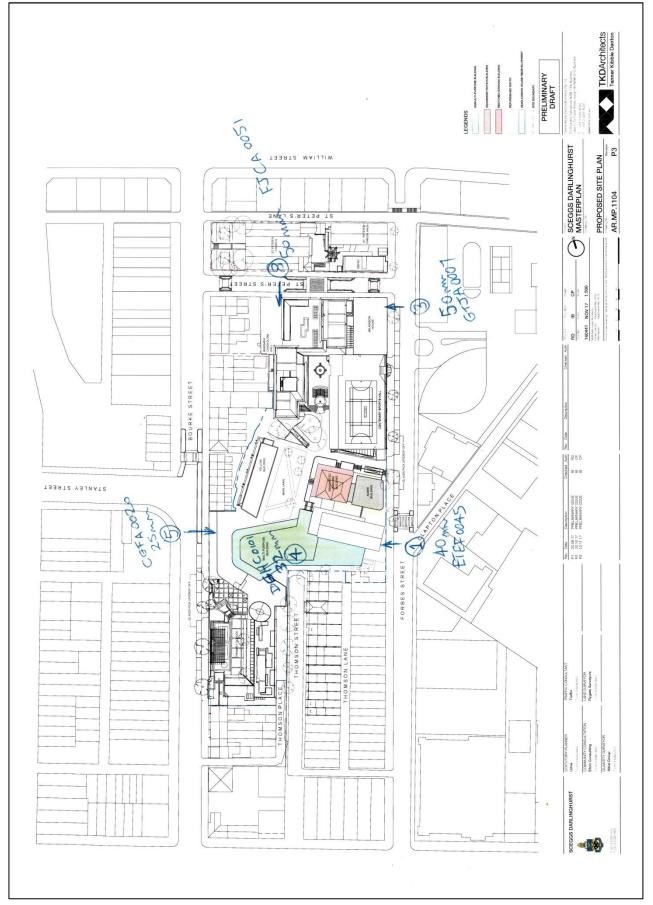

Water supply is critical to some businesses and Sydney Water will treat vulnerable customers, such as hospitals, as a high priority.

Have you thought about a contingency plan for your business? Your Business Customer Representative will help you to develop a plan that is tailored to your business and minimises productivity losses in the event of a water service disruption.

For further information please visit the Sydney Water website at: <u>http://www.sydneywater.com.au/OurSystemsandOperations/TradeWaste/</u> or contact Business Customer Services on 1300 985 227 or businesscustomers@sydneywater.com.au.
