Anne and Brian Edwards

'Lochiel' The Gap Road,

Salisbury Plains, NSW 2358

Dear Brian and Anne,

We are writing to you in regard to our concerns with the proposed New England Solar Farm Project. We would like to raise these concerns with you so that you are aware of our position in regard to this project.

As you are aware UPC Renewables is planning to construct an 800MW Solar Farm with 200MW being proposed for the Salisbury Plains area, Southern Array of the project. We are not opposed to the project but have significant concerns about two particular areas that the proposal is encompassing as these land areas will impact on us as residents and you as well.

Please see the attached map for reference.

We have proposed to UPC Renewables to remove both land areas along The Gap Road to the east and west. Abby Croft's to Cookes Creek and your land area to the tree break. This is a very small land mass and UPC has stated that they will have more land than what will be needed for the project. We believe this will in turn benefit both you and Abby. It will maintain the beautiful outlook we have here at Salisbury Plains and remove the unsightly 3m security fence that is planned to line The Gap Rd. This will keep the area aesthetically pleasing for all.

We are also proposing that UPC screen either side of Salisbury Plains Rd where the project will be seen by residents, tourist and passer byers. Refer to the map.

By implementing this it will allow our business and lifestyle to continue and the impact will be lessened. We have committed the last 15 years to raising our family and growing our business in this beautiful part of the New England and we hope we can continue to do this. The impact of this large scale solar farm will be quite distressing during construction time but we believe with our proposal the outcome will be better for all.
