

**Angus Place Colliery Development Continuity Project
Section 75W Modification to Project Approval PA06_0021
Development of roadways and headings for longwalls 1001 and 1003
forming part of EXTENSION PROJECT SSD5602
MAY 2014**

I object to the application for the following reasons

- All submissions received opposing the recent Angus Place Extension Project SSD5602 should be taken as submissions opposing this Modification as it is part of the same Project.
- The timing of this Modification going on exhibition is a blatant attempt to confuse the general public.
- This modification should not be approved until Extension Project SSD5602 is accessed and processed through the proper channels. If this Modification was approved it would be like excavating a multi level car park for a high rise building before the DA was approved.
- Even though Centennial calls this a Development Project (previously called 'trial mining') they plan to extract 800,000 tons of coal from longwall panels 1001 and 1003.
- It is too much to expect interested parties to read and digest hundreds of pages more in only 15 days
