

## OBJECTION

Over 12 months ago, my husband and I retired to Nundle village after selling our 2,500 acres farming property. The sale of this property was a big decision as it was passed down through generations. We chose to retire in Nundle village for the convenience of the local shops while being able to enjoy the peace and tranquility without detachment to our meaningful family history.

I have lived in the Nundle district for over 60 years. The natural surroundings, quietness and rural characteristics is what I love most about Nundle. I have spent my whole life here, bringing up 3 lovely boys all of whom attended the local public school and is part of a caring and friendly community. With extended family located around the district, living in Nundle meant that we could always conveniently get together at any time.

Nundle is the perfect picturesque setting of rural Australia. The proposed project is not suitably located in this unique environment. It will industrialise the landscape and cause disruptions to our town.

The complicated travel movements in and out of town and through the town centre. The reduction in car spaces and restricted travel movements would be most inconvenient to me and to the local community.

The turbines will be seen in Nundle and highly visible from kilometres away and will affect many residents that live in the area.

I will have full views of the turbines from my home during the day and see the required aviation lighting at night. Large trucks will travel past my place every day. I do not appreciate the imposition of visual and noise disturbance hindering upon my existing lifestyle.

I would very much like to enjoy the rest of my days in a surrounding environment that I have chosen to live it. Please do not put this development in a location that is not suitable for the area and to its residents.
