I support thego ahead of the Hills of gold Wind Farm Project based mainly on my belief that this country and all the countries in the world have to reduce the pollution caused by the collection and burning of coal.

We are all aware of the devastating bush fires of last year in this country alone which the experts claim that global warming played a major roll in. I believe that renewal energy will play a major roll in reducing the global warming.

I believe the production of coal by open cut mining plays a large part in the cause of air pollution. Besides the large amount of dust that can be caused by this method of mining, and the air pollution caused by the large machinery involved. Take one those large dump trucks with a diesel motor of approximately 100lt each. When they are operating, coughs out approximately 90,000lts of exhaust gasses every minute. That is just one large dump truck alone, not counting all the other machinery involved like bull dozers, loaders etc.. And the coal hasn't even been burnt yet. I could go on.

I hope this wind farm goes ahead and many more like it. We have to do something about the global warming.
