

Dear Kaitlyn Symington.

Re: DA application Gunnedah Waste Facility
Application No.SSD-8530563

I live at [REDACTED] My objections are as follows

Our forward thinking shire council have put our domestic waste facility a further 2.3Klm out of town why would you build a contaminated wast facility Any closer to town and CBD.

It is stated in the application that the position is out of flood area however it is in the flood plain catchment area where all waters make there way down Natural water courses to lagoons and eventually into the Namoi river. Any dust or pollutants would settle on these flood plains and would be washed down the water courses with the same destination the river.

Noise who needs it and it is stated that noise from the crusher will exceed maximum levels from time to time

Tonage is stated at 250000 tone but add on their additives to process this. The plant is not the final destination so there must be 250000 tone come back out so there is a movement of 500000 tone. No final destination for this product has been given.

I also own and live in one of about 27 houses that are within the stated 1.12km of the proposed plant and there was no communication or consultation prior to this application

Yours sincerely

[REDACTED]
