Re: Submission -07\_0118MOD1

To whom it may concern,

My property is host to six turbines on the Gullen Range Wind Farm. The minor relocation of turbine sites have resulted in a greatly improved environmental outcome. No trees were removed during construction and five of six sites were located on flat ground which lead to a big reduction in soil disturbance.

The new location of turbine sites closely shadow the original plan making it visually the same after construction.

I support the Modification Application because of the pleasing environmental result I have had on my property during construction.

Regards

*W.C. Leonard*
