OBJECTION

- Firstly I'm very aware of the fact that notification of exhibition by DPE or Cadia/Newcrest was less than fair or correct...a sign of trying to get things (Mod 14) passed unnoticed and with minimal time to collectively gather information..... unfair and well known tricks to put it over the farmers etc

-I have read both the complete objections submitted by Michael and Frances Retallack and John and Hilde Gerathy . I would like to state that I completely agree with their objections and reasons

-My own objections are to the continued unsupervised outpouring of dust/silica

-The diversion and disappearance of water flow in both creeks running through Errowanbang

-Unrecognised effects of dust spillage and silica on livestock through eating and drinking dust filled grass and water

This in turn effects livestock sales and in long term Australia's food chain (absorption) of unknown unchecked substances in this dust/silica

-PROFIT BEFORE PEOPLE

More concerning are families living in the wide spread area affected by this fallout from the mine ...due also to wide spread by wind

- My parents owned Errowanbang and now my brother John Gerathy has the property keeping it at great cost productive and beautiful for extended family members to continually visit and stay . I am at the farm regularly and have seen first hand the dust on the outside verandah and the garden a beautiful display of roses my father imported to grow at Errowanbang

- The Mod 14 proposal is objected by me and is of great concern to me for the future generations of our family I lived at the farm for 14 years when my parents moved in we have all worked hard as a family to establish a working productive property and healthy environment for our children and their children

- Both my son and my granddaughter are asthmatic and it concerns me greatly of the on going affect of the pollution (dust) on their health as they are constantly gathering with family at Errowanbang

-We live in the country and visit the country to expect and have fresh air free of (mine generated) pollution We want to keep our children and loved ones safe from health problems

-I have never made a political donation
